THE MOUNT SINAI HOSPITAL—FIFTH AVENUE FRONT

SEVENTY-SEVENTH

ANNUAL REPORT

OF

THE MOUNT SINAI HOSPITAL

OF THE

CITY OF NEW YORK

For the Year 1929

Act of Incorporation Filed February, 1852

CONTENTS

Annual Meeting—Minutes	33
Attending Staff	12-25
Committees of Board of Trustees	7-11
Committees of Medical Board	27-29
Consulting Staff	12
Constitution, Extracts from, on Endowments	248
Current Account Receipts and Expenses	64-65
Dedicated Buildings	195-200
Dietetics, Report of Committee	133-134
Donations	66-68
Endowed Rooms	205-206
Endowed Wards	200-204
Endowment Funds	74
Endowments for Special Purposes	69-71
Executive Officers, Mount Sinai Hospital	32
Officers, School of Nursing	32
Fellowships and Special Appointments	23
Graduate Medical Instruction, Department of	30-31
Graduates of House Staff	244-247
Historical Note	3-5
House Staff	26
Laboratory Staff	22
Laboratories, Report of Committee	130-132
Ladies' Auxiliary Society, Officers of	192
Ladies' Auxiliary Society, President's Report	192-193
Ladies' Auxiliary, Treasurer's Report	194
Legacies and Bequests	234-239
Life Beds	232-233
Medical and Surgical Staff, 1930	12-25
Medical Research Funds	72-73
Medical Staff Statistics	63
Memorial Resolutions	46-48, 144
Memorial Beds	229-231
Officers, Medical Board, 1930	27
Officers and Trustees Since Foundation	240-243
Out-Patient Department Staff	12-25
Out-Patient Department, Report of Committee	120-129
Perpetual Beds	210-226
Perpetual Beds—Children's Pavilion	227-228
President's Report	34-45
School of Nursing, Officers and Directors	135
School of Nursing, President's Report	136-143

Social Service Auxiliary, Clothes Committee, Report of	181
Social Service Auxiliary, Donations	178-180
Social Service Auxiliary, Gifts of Articles	182-190
Statistics—Comparative Statement	114-119
Tablets	207-209
Treasurer's Report	75-113
Trust Funds for Special Purposes	68
Trustees, 1930	6

HISTORICAL NOTE

The Mount Sinai Hospital was organized and incorporated in 1852 for "benevolent, charitable and scientific purposes." The work of the Hospital was begun in a small private dwelling on 28th Street, between Seventh and Eighth Avenues, which accommodated 28 patients. The Hospital now has accommodations for 654 patients, not including 17 beds in the receiving ward.

In 1871 the Hospital completed and occupied, at Lexington Avenue, 66th and 67th Streets, a building having a capacity of 200 beds.

The Dispensary, now known as the Out-Patient Department, was inaugurated in 1872.

The clinical departments first organized were those of medicine and surgery; a gynecologist was appointed in 1877.

Mount Sinai created precedents among the hospitals of New York by setting up a distinct pediatric service in 1878 and an otologic service in 1879; the latter was at first combined with, but in 1910 was separated from, ophthalmology and laryngology.

The Mount Sinai Training School for Nurses, in affiliation with the Hospital, was incorporated in March, 1881; the name of the school was changed in 1923 to The Mount Sinai Hospital School of Nursing.

In 1883 a committee was formed to develop a Medical Library.

In 1886 a district medical service was inaugurated.

Provision for the care of private patients was first made in 1886; an intermediate or "semi-private" ward was opened in 1904.

In 1893 a Pathological Department was established, and consultants in dermatology and neurology were appointed.

The corner stone of the group of ten hospital buildings occupying the block bounded by Fifth and Madison Avenues, 100th and 101st Streets, was laid May 22nd, 1901; the buildings were completed and occupied March 15th, 1904, when 500 beds became available for the care of the sick.

A Department of Dietetics was established in 1905.

HISTORICAL NOTE

A Social Service Department was inaugurated in 1906.

A Tuberculosis Clinic was organized in 1908.

The first of a series of "Fellowship" funds, to assist investigators engaged in scientific medical work, was created in 1908.

The Hospital's first X-ray machine was installed in 1900. In 1910 a full-fledged Department of Radiology was formed and in 1924 the department was subdivided into separate branches for (a) radiography and (b) X-ray and radium therapy.

In 1910 the three-story Out-Patient Building, which had been completed in 1904 was altered to a five-story building, and the Nurses' Home was enlarged from a six-story to an eight-story building. At the same time, new isolation wards were erected on the roof of the Medical Building.

A Dental Department was established for the benefit of in-patients in 1910; this work was extended to the Out-Patient Department in 1925.

An orthopedic surgeon and a physio-therapist were named in 1911.

Roof wards for outdoor treatment were erected on the Medical and Surgical Pavilions in 1912.

The Hospital in 1912 accepted a fund "for the advancement of preventive medicine." A "health class" for children was promptly established.

In 1913 the erection of seven additional buildings south of 100th Street was begun; four of these buildings were occupied in 1915, and three, namely, the Private Pavilion, the Children's Pavilion and the Auditorium, were completed in the spring of 1922. With these additions, the Hospital was able to care for 654 patients.

The first of a series of lectureship funds was established in 1913. These funds provide honoraria for distinguished visiting lecturers.

Electro-cardiography was instituted in 1915.

In 1917, Mount Sinai Hospital became a constituent member of the Federation for the Support of Jewish Philanthropic Societies, which was organized in that year.

HISTORICAL NOTE

Until 1917, tonsilleotomies were performed in the Dispensary, often without anesthesia; in the year mentioned, a "tonsil and adenoid" ward, with a fully equipped operating room, was opened.

A Mount Sinai Hospital Unit, organized as a section of the Medical Department of the United States Army, was sent to France in 1918.

Post-Graduate medical instruction was formally organized in 1923, in affiliation with the College of Physicians and Surgeons of Columbia University.

A permanent fund for the support of medical research was inaugurated in 1925, prior to which research was precariously supported by occasional donations.

The construction of a new school and residence building for the School of Nursing, fronting on 98th Street, between Fifth and Madison Avenues, was begun in 1925 and completed in 1927; the residence accommodates 490 nurses.

In 1929 the construction of a new building on Fifth Avenue, between 100th and 101st Streets for the care of patients of moderate means was begun. When completed in 1931, it will provide accommodations for 120 patients. Its upper floors will contain twelve operating rooms and accessory facilities.

STATISTICAL SUMMARY

Year	Patients Treated in Hospital	Hospital Major Surgical Operations	Consultations in Out-Patient Department	Disbursements for Maintenance of Hospital and Out-Patient Department
1857.....	216	46	None	\$ 9,000.00
1860.....	297	46	None	14,000.00
1870.....	663	225	None	20,000.00
1880.....	1,437	240	9,922	44,376.10
1890.....	2,862	1,049	43,560	100,000.00

MINUTES OF THE ANNUAL MEETING OF
THE MOUNT SINAI HOSPITAL OF THE CITY OF
NEW YORK

HELD MARCH 23rd, 1930

The Acting President, Mr. Leo Arnstein, called the meeting to order.

On motion duly made, seconded and unanimously carried, the reading of the minutes of the Annual Meeting, held March 17th, 1929, and the reading of the Treasurer's Report were dispensed with.

The Acting President read his report.

Dr. Shirley W. Wynne, Commissioner of Health of the City of New York, addressed the meeting on the subject of "The Hospital's Contribution to Public Health."

On motion duly made, seconded and unanimously carried, the meeting adjourned.

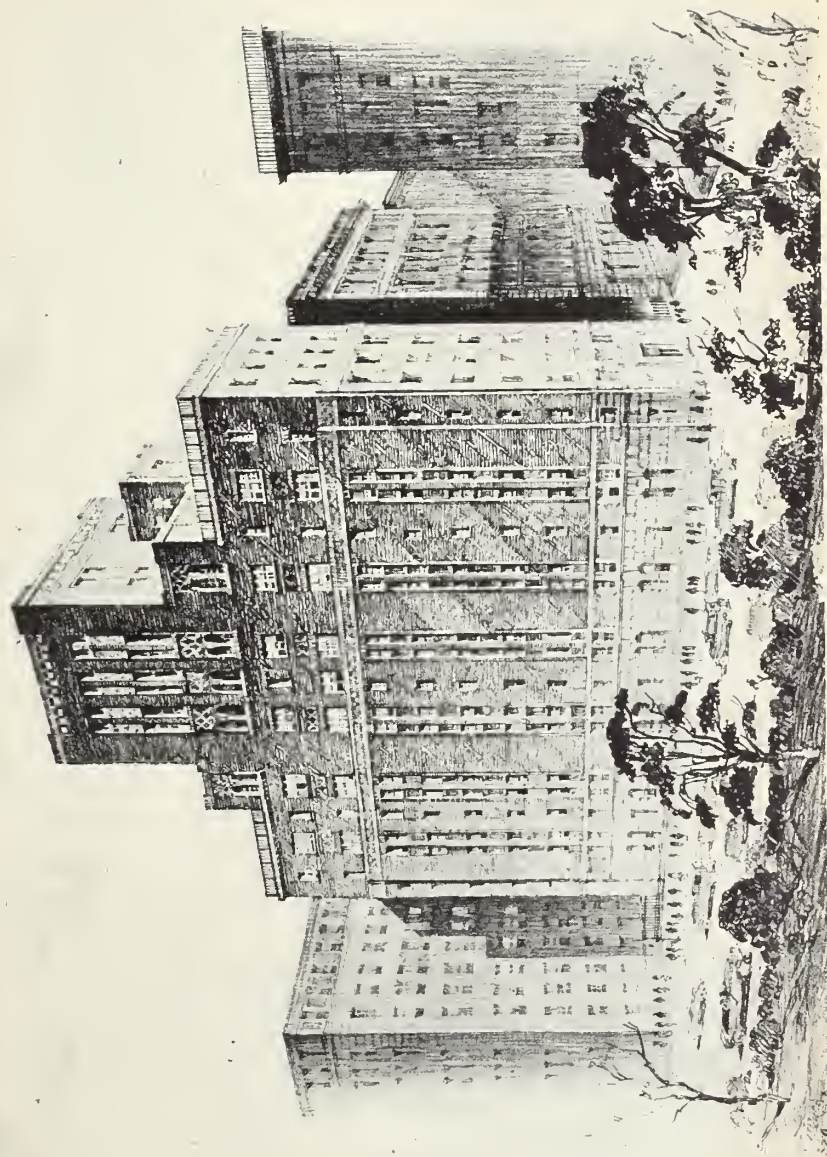

WALDEMAR KOPS,
Acting Secretary.

PRESIDENT'S REPORT

Each year as the functions of this Hospital grow, both in quantity and variety, it becomes increasingly difficult to describe its activities adequately and still not to trespass unduly on your time.

The past year has seen us engaged in carrying on the usual activities with special attention to the development and integration of the various services in the Wards, the Out-Patient Department and the Laboratory, and at the same time planning for the new Semi-Private Pavilion and for the alterations to our Administration Building, which were foreshadowed in last year's report. At that time we reported plans for a series of plant improvements involving the expenditure of more than two million dollars, more than half of which was subscribed by members of the Board of Trustees, the balance being contributed by several hundred friends of the Hospital. The program involves both important new construction and the extensive alteration of existing buildings.

Plans for a new building, to occupy the Fifth Avenue block front between 100th and 101st Streets, have been completed, and the foundations are already in place. At the basement level extensive additions to the present store rooms of the Hospital will be made. Above this there will be a ten-story structure, surmounted by a two-story tower which will contain working space for the preparation of surgical supplies, ventilating machinery, and other technical equipment. On the ground floor of this building there will be reception rooms, administrative offices, and quarters for a resident staff whose presence in the building will insure ample protection to patients and a quick response to emergency calls. The second to the seventh floors inclusive will be used for the accommodation of patients, and here a somewhat novel plan of spacious three-bed curtained wards arranged in pairs has been adopted, with a utility room and a nurses' station attached to each pair of three-bed wards; the arrangement of beds and curtains is such that a large measure of privacy is obtainable. From every patient's bed there will be a direct view of Central Park. On each floor there are to be two separation or quiet rooms to be used as required. Spacious roof gardens and a day room and porch on each patients' floor will contribute to the comfort of the patients. This whole service has been designed to meet the needs of patients of moderate means.

NEW SEMI-PRIVATE PAVILION NOW UNDER CONSTRUCTION

THE MAIN ENTRANCE

PRESIDENT'S REPORT

Twelve major operating rooms with all of the service features that these require will occupy the eighth and ninth floors; some of these will take the place of the five operating rooms in the Administration Building which have been in use since 1904. The receding tenth floor, which will be surrounded by an open deck, will be subdivided into solaria for convalescents.

Plans have been completed also for the reconstruction of the laundry, which is to be re-equipped with modern labor-saving machinery, and the capacity of which is to be sufficiently increased to care for the needs not only of the new Semi-Private Building but of such other additions to the Hospital as may be reasonably anticipated during the next decade.

One of the attractive features of Hospital management is the fact that there is little fear of stagnation. The progress of medicine is a constant goad and the demands resulting from new methods and the increasing use of diagnostic and therapeutic means, is a never ceasing challenge to our best efforts.

In the early part of 1929, The Mount Sinai Hospital admitted the 300,000th patient since its first small beginning more than seventy-five years ago and during the year almost 200,000 hospital days of care were given to 12,400 patients who were admitted to the Hospital. I mention these figures merely as a measure of its work on the quantitative side, but dwell with a greater sense of satisfaction on the quality of service and its life-saving value to the community.

This is possible of accomplishment only through the untiring cooperation of our able medical and surgical staffs, which under the fine leadership of its President, Dr. Friesner, has given unsparingly of its ability and time in order to serve our patients. No finer piece of communal work is accomplished by any group than by this.

The Laboratory, under the direction of Dr. Gross, is showing the effects of the full time system which has now been in operation four years and several important undertakings are rapidly maturing. More men are being accommodated within the walls of the Lewisohn Laboratory than ever before. A larger number of workers is being taught and the publications of value that have been issued are more numerous and significant than ever before. The Clinical Pathological Conferences which are being held weekly,

PRESIDENT'S REPORT

have attracted so large a group that they have outgrown the space originally assigned to them in the Laboratory and have to be held in the Blumenthal Auditorium, whose capacity is often taxed to the utmost. We are most fortunate in having so rich a field of clinical material, which is surpassed by few, if any hospitals. Dr. Klemperer in the Department of Morbid Anatomy, Dr. Sobotka in the Department of Chemistry and Dr. Schwartzman in the Department of Bacteriology, have all contributed largely to these successful results.

The Out-Patient Department is one which always challenges our interest. Although carried on within four walls, the amount of work done there seems capable of indefinite expansion and also of continuous improvement in organization and method. The Lehman Dispensary and Walter Children's Clinic Buildings have seen countless thousands visit their halls; in the year 1929 alone, over 200,000 consultations were held. In connection with the changes which are being contemplated in several of the buildings to which reference was made above, alterations of considerable magnitude are being considered in the Lehman Dispensary as well, but what is actually required is a drastic reconstruction to meet the present needs of an up-to-date Out-Patient Department. Some of the floors of the old Nurses' Training School will probably be pressed into service to furnish space for the Central Record Room and follow-up service and the clinic rooms will be modernized so far as possible. Some of the new features that have been introduced in the Out-Patient Department are:

1. A medical admitting clinic.
2. A basal metabolism laboratory.
3. A dietitian for the children's in and out service.
4. Separation of epilepsy, thyroid disease and metabolic disorders into groups for diagnosis, treatment and study.

The Guggenheim Private Pavilion cared for 2,562 patients during the year and if the almost unanimous testimony of these patients is to be believed, the high standard of service previously established, was maintained. The management of a Private Hospital calls for great tact and judgment, as well as efficiency, and we are fortunate that the supervisor of the Private Pavilion, Miss Erwin, combines these qualities so effectively.

PRESIDENT'S REPORT

We try never to lose sight of the educational possibilities of the Hospital and to offer its opportunities as widely as possible. The Post Graduate courses showed growth over the previous years, as evidenced by the 128 registrations by 74 physicians, who came both from New York City and from more distant points. Dr. Simon Flexner delivered the William Henry Welch lecture, while Dr. A. Carrel of Rockefeller Institute and Dr. G. V. Anrep of Cambridge, England, were the distinguished speakers for the Edward G. Janeway lectures.

A measure of the wide-spread reputation enjoyed by The Mount Sinai Hospital is the great range of territory from which leaders in medical and hospital circles have come as visitors and every country in Europe, as have also Africa, Asia, Australia and South America, sent its representatives, who have stayed with us from one day to three weeks, studying our clinic, laboratory and administrative methods. Among those who favored us with lectures in this auditorium were:

Dr. Julius Tandler, Professor of Anatomy, University of Vienna.

Dr. I. Snapper, Professor of Internal Medicine, Amsterdam, Holland.

Professor Arthur W. Meyer of Berlin.

Professor Silberstein of the University for Experimental Pathology, Vienna.

Dr. Lina Stern, Professor of Physiology, Moscow, Russia, and Professor A. Schlossman of Dusseldorf, Germany.

In the course of the year, many minor changes and improvements are bound to take place. A few of these, which will tend to give more comfort and better service to the patient, are the introduction of cubicles in the Reception Ward, the alteration of the roof of the Einstein Children's Pavilion to permit of sun and fresh air treatment of bed patients, the improvement in ward food service, and the extensive wiring to make possible bedside X-ray and electro-cardiograph work, thus saving the patient the discomfort of transfer to a central point.

The Hospital and the community suffered a severe loss in the death of our beloved colleague, Sidney S. Prince, who passed away on July 20, 1929. He served on this Board since 1915, and

PRESIDENT'S REPORT

as Treasurer from 1915-1925. His time, thought and financial support were always at the command of the Hospital and he took a keen interest in every phase of the Hospital's work, with special concentration on the Laboratory. He endeared himself to his associates, who truly mourn his loss. Resolutions which were adopted at the time of his death, will be printed in the Annual Report.

Two of our former Trustees, Mr. Louis M. Josephthal and Mr. M. Samuel Stern, also passed away during the last year. Both of them served the Hospital well while officially connected with it and we feel the loss of these old friends.

Dr. Cyril Barnert, for whom the continuance of a brilliant career in ophthalmology was predicted, was taken off in his prime and passed away on January 8, 1930, leaving behind a host of admirers and real friends. In addition to the work which he did for the Hospital within its walls, he also served overseas as a member of Base Hospital Unit No. 3.

Dr. Louis Kaempfer, who had served the Hospital faithfully since 1905, part of the time as Adjunct and Associate Laryngologist, died while off service on February 17, 1930. He was a man of high character and splendidly equipped for his life's work and his untimely death is mourned by those who knew him.

In last year's report, I mentioned that Dr. Goldwater had been asked to join the Board of Trustees, but that he had expressed a preference to fill the position of Consultant to the Hospital. After a trial of this relationship, it was felt that it was not in all respects satisfactory and in the fall Dr. Goldwater was elected a Trustee, in which position he has already made his value felt.

Mr. David Sarnoff was elected to the Board of Trustees during 1929 and his wide experience and deep interest in our work are sure to make him a valuable member.

Dr. Charles A. Elsberg, after having served the Hospital most faithfully over a period of thirty-five years in a number of capacities, and finally as one of the Surgeons to the Hospital, resigned this position on June 1st of last year on account of pressure of other duties. It was with real regret that we saw the severance of this long standing relationship and the Board of Trustees appointed him as Consultant Surgeon.

PRESIDENT'S REPORT

Other changes that took place in our medical staff during the period from April, 1929 to February, 1930 are as follows:

Appointments:

Dr. Walter J. Highman, as Dermatologist to Hospital
Dr. Isidor Rosen, as Dermatologist to Hospital
Dr. Marcus A. Rothschild, as Cardiographer
Dr. William Harris, as Radiotherapist
Dr. Ernest E. Arnheim, as Adjunct Surgeon
Dr. Sigmund Mage, as Adjunct Surgeon
Dr. Coleman B. Rabin, as Adjunct Physician
Miss Cecele Herschberger, as Assistant Bacteriologist
Miss Miriam Reiner, as Assistant Chemist
Dr. Myer E. Golan, as full time paid Assistant Radio-
therapist
Dr. Daniel M. Kollen, as Assistant Dentist
Dr. Bernard M. Sussman, as Assistant Dentist
Dr. Burrill B. Crohn, as Associate in Medicine

Resignations:

Dr. Marcus A. Rothschild, as Associate Physician
Dr. Burrill B. Crohn, as Associate Physician
Dr. John C. A. Gerster, as Adjunct Surgeon
Dr. Leo Loewe, as Adjunct Physician
Miss Suzie Swinburne, as Assistant Bacteriologist
Dr. Irwin Levy, as Adjunct Dentist
Dr. Max Michaelson, as Assistant Dentist
Dr. David Cohn, as Assistant Chemist
Dr. Nathaniel Robin, as Assistant Radiologist
Dr. Samuel F. Weitzner, as Assistant Radiotherapist

To fill the vacancies for the term ending March 1936, the Board of Trustees has elected the following:

Louis W. Abrons	DeWitt Millhauser
George B. Bernheim	David A. Schulte
Lester Hofheimer	Henry F. Wolff

Mr. Henry Morgenthau, Jr., whose term expired, declined a renomination because of the pressure of other work. It is with real regret that we see the severance of this pleasant association.

PRESIDENT'S REPORT

The expenditure for current purposes of the Hospital, including the School of Nursing, the Social Service Department and the Ladies' Auxiliary, amounted in 1929 to.....	\$1,727,977.00
Total receipts applied to current expenditures.....	1,698,886.93
<hr/>	
Leaving a deficit of.....	\$29,090.07

Included in these receipts was the amount of \$497,429.72 for The Mount Sinai Hospital Group received from Federation. We are deeply appreciative of the support granted us by Federation, which because of the untoward financial situation during the latter part of the year, was confronted with a particularly difficult task. Undaunted by the discouraging outlook, which was at its worst just when the Business Men's Council of Federation was about to make its final drive, the leaders in Federation, under the guidance of Mr. Dudley Sicher, its President, and Mr. Sam A. Lewisohn, Chairman of the Business Men's Council, redoubled their efforts and by leaving the books open for a few days at the end of the year, succeeded in closing the year without a deficit. The Hospital, as one of the Constituent Societies, is glad to make record of its appreciation of this splendid piece of work.

The need of the Hospital for increased support is again shown by the year's statement with its resulting deficit of \$29,090.07. The constantly increasing level of salaries and wages of the staff and employees, which, as is the case in all charitable institutions, are notoriously low, the increased cost of repairs and replacements in buildings now more than twenty-five years old, all add to the mounting costs. Another very important factor and an inevitable concomitant to progress in modern medical practice, is the increased cost of patient care, brought about by new discoveries and developments in diagnosis and treatment. New methods, new drugs, new equipment, more X-ray examinations, more metabolism and electro-cardiographic determinations, more exact scientific laboratory tests, all combine to increase costs, but, in their turn, make diagnosis of obscure disease more certain and life longer and safer.

The United Hospital Fund has earned our gratitude by its contribution of \$52,137.76, which, as has been the case for many years past, was the largest amount allotted to any general hospital. From the City of New York through the Department of Public

PRESIDENT'S REPORT

Welfare, we have received \$66,936.56, and both for this grant and for the many courtesies at the hands of Mayor Walker, Comptroller Berry, Commissioner Wynne, The Board of Estimate and from many of the department heads, we are deeply grateful.

The liberality of our friends and well-wishers continues to stimulate us in our task of administration. The past year has once more seen us recipients of most generous gifts, both by way of legacies and offerings during life. Although appropriate thanks have been given at the time of receipt of these generous donations, I want to give expression once more to our deep sense of obligation for these gifts, which make it possible by reason of their designation for special purposes, to carry on scientific work of a constructive kind. The following is a list of these benefactions:

PERPETUAL BEDS IN THE MAIN HOSPITAL

In memory of Herman Rawitser—Dedicated by his wife, Theresa V. Rawitser.....	\$7,500.00
In memory of Ada Heidelberg Strauss—Dedicated by her husband, Seymour A. Strauss	7,500.00
The Rebecca Friedlander Bed—Founded by provision in her will	5,000.00
In memory of Heinemann and Rosa Vogelstein—Dedicated by their children (Formerly a Memorial Bed)	4,000.00

PERPETUAL BEDS IN CHILDREN'S PAVILION

The Peter F. Meyer Beds—Founded by provision in his will	25,000.00
--	-----------

LIFE BEDS

In memory of Benjamin Ehrlich—Endowed by his wife, Fannie Ehrlich	\$2,500.00
In memory of Julius Kaufmann—Endowed by his wife, Emma H. Kaufmann	2,500.00

FUNDS WHOSE INCOME IS TO BE USED FOR RESEARCH

Estate of Sidney S. Prince—For Research Work.....	100,000.00
Estate of Leo L. Doblin—For Leo L. Doblin Endowment Fund for Research Work (On account of a \$10,000.00 Legacy)	7,750.00

PRESIDENT'S REPORT

FUNDS WHOSE PRINCIPAL IS TO BE USED FOR RESEARCH

Altman Foundation—For Peritonitis Research Fund....	\$5,000.00
Nathan Hofheimer Foundation, Inc.—For Research Work in Anaerobic Infections. (1930 grant).....	4,000.00
Lucius N. Littauer Foundation, Inc.—For Study of Inflammatory and Degenerative Diseases of the Heart and Blood Vessels	3,700.00
Nelson I. Asiel—For a Three-year Study of Cancer. (1930 grant)	2,000.00
Manhattan Research Foundation—For Bacteriological Research Work	2,400.00
Lieut. Gov. Herbert H. Lehman—To pay for Mobile Machine and Accessories for Electro-cardiographic Research Work on the medical wards.....	2,500.00
Mrs. Addie W. Homan—For the Isidore Hershheim Fellowship in Chemistry. In memory of her father	1,500.00
The Dr. Herbert L. Celler Fellowship Foundation— For the Dr. Herbert L. Celler Foundation Fellow- ship Fund	1,000.00
Misses Ida and Rose Frankenhimer—For the L. S. Frankenhimer Fellowship Fund in Pediatrics.....	600.00
Through Dr. Julius Wolff—For Eye Pathology Tech- nician's Salary Account	1,640.00
Anonymous—For Research in Anaerobic Bacteriology	600.00
Mrs. Charles Klingenstein—For salary of Technician for Otological Research	600.00
Mr. M. W. Amberg—For salary of Technician for Otological Research	100.00
Anonymous—Through Dr. Isidore Friesner—For salary of Technician for Otological Research....	100.00

FOR EXPERIMENTAL GASTRO-ENTEROLOGY RESEARCH WORK

Dr. Albert A. Berg.....	2,500.00
Mr. Lucius N. Littauer	1,000.00
Mr. Ludwig Vogelstein	1,000.00

PRESIDENT'S REPORT

FOR GENERAL RESEARCH WORK

Mr. Lawrence J. Hirsch	\$265.44
Mrs. Etta K. Guinzburg	100.00
Henri J. Nothmann	100.00
Mrs. Hannah S. Kohn	100.00
Samuel Keller Jacobs Fund—Founded by Samuel Keller Jacobs, for Research Work in Thrombo- Angiitis. (1930 grant)	6,000.00

TYPHOID FUND

Mrs. Therese H. Prince.....	1,250.00
Mr. Walter W. Naumburg	1,250.00
Mr. Waldemar Kops	1,250.00
Mr. Adolph Lewisohn	1,250.00
Mr. George B. Bernheim	1,250.00
Mr. Arthur Lorsch	500.00

LEGACIES AND BEQUESTS (\$5,000.00 AND OVER)

From Estate of Simon R. Weil.....	156,388.85
“ Estate of Michael P. Rich.....	20,000.00
“ Estate of Joel Goldenberg. (Making a total legacy of \$175,382.15)	19,210.45
“ Estate of Emma Blumenberg.....	10,245.53
“ Estate of Harriet F. Haas.....	10,000.00
“ Estate of Jacob Mayer.....	5,000.00
“ Estate of Louis C. Raegner.....	5,000.00

DONATIONS FOR SPECIAL PURPOSES

Mr. Adolph Lewisohn—On account of Pathological Building for 1928 and 1929 instalments.....	30,000.00
Mr. Adolph Lewisohn—For a Nordensen Camera, for photographing the backgrounds of the eye and the accessories	656.50
Mr. David A. Schulte—On account of operating O. P. D. Dental Department.....	6,000.00
Mrs. Fannie C. Korn—For Fannie C. Korn Fund for the establishment and maintenance of a splint and apparatus room for the use of the Orthopedic Service. In memory of Henry Korn.....	5,000.00

PRESIDENT'S REPORT

Friends of the late Dr. A. Philip Zemanſky, Jr.—For Purchase of Books for the Hospital Library.....	439.00
Dr. H. G. Friedman—Towards the printing of the Electro-cardiographic Film	250.00
Mr. Philip J. Goodhart—For additional Oxygen Tent	245.00
Dr. Leo Kessel—For full-time Technician for Research in Electro-cardiographic Laboratory.....	1,000.00
Dr. Marcus A. Rothschild—For salary of Technician in Electro-cardiographic Laboratory.....	200.00
Dr. Morris Manges contributed 200 volumes to the Jacobi Library.	

The School of Nursing, of which Mr. Hugo Blumenthal is President, has continued as an all important factor in the Hospital's work. Under the able direction of the Superintendent of Nurses, Miss E. A. Greener, it has steadily gone forward with its program of expansion, made possible by the completion of the new home two years ago, and has, with the introduction of the last class of new students, reached its maximum capacity of 460 graduate and pupil nurses, exclusive of dietitians.

The Social Service work, headed by Mrs. A. A. Cook, has once more shown the importance of its work in humanizing the activities of the Hospital and, under the very competent leadership of Miss Lissauer, has maintained its high standard of the past.

To the Ladies' Auxiliary Society, guided by its President, Mrs. E. Frenkel, we are grateful for the important work, well done, in furnishing linens to the Hospital.

I wish I could, at least by mention of name, give due acknowledgment to all who have labored faithfully and well in the above departments, as well as in the Hospital generally. As you will understand, this is impossible, but I cannot refrain from giving honorable mention to some of the leaders, such as Dr. Turner, Director of the Hospital, Mr. Louis Miller, Jr. and Dr. S. Manheimer, Assistant Directors, Miss Slator, Supervisor of the Out-Patient Department, Miss Wood, Supervising Dietitian, Miss DeBarber and her successor, Miss Hagerty, Dietitians in charge of the Private Pavilion, Mr. Cook, Chief Clerk and Auditor, Mr. Rogin, Chief Pharmacist, and Mr. Smith, Chief Engineer.

PRESIDENT'S REPORT

Mr. Alfred Lowenthal has added another year to the many in which he has rendered the Hospital invaluable aid, by placing at its disposal his time and ability in the Photographic Department.

Mr. J. D. Mason, of Hoadly, Lauterbach & Johnson, has generously aided the Hospital whenever it had occasion to call on him for legal services.

To those I have mentioned by name and to many others that must remain nameless, as well as to you, our well-wishers, supporters and friends, we submit this record of the year's accomplishment, hoping that it, more than any inadequate words of mine, will make you feel that your support and confidence were not misplaced.

LEO ARNSTEIN,
Acting President.

RESOLUTION ON THE DEATH OF LOUIS M. JOSEPHTHAL

At a meeting of the Board of Trustees of The Mount Sinai Hospital, announcement having been made of the death on May 23rd, 1929, of Louis M. Josephthal, the members of the Board decided to express their sentiments in the following minute:

"We have heard with the deepest regret of the untimely death of Admiral Louis M. Josephthal, who served Mount Sinai Hospital as Secretary from 1897 to 1902, and as a member of its Board for two years thereafter.

"During his service, he showed the deepest interest in the affairs of the Institution and rightfully earned the regard and respect of those who were associated with him in this philanthropic work.

"As a citizen of our community, he, at an early age, evinced the greatest interest in naval affairs and from a lowly position in the State Naval Reserve, he gradually rose through application and merit to the highest office in that service, serving for a number of years as Rear Admiral of the State Naval Militia.

"He enjoyed the respect of the entire community and the love and affection of those with whom he came into personal contact."

To the members of his bereaved family, we convey our deepfelt sympathy in the great loss which they have sustained.

LEO ARNSTEIN,
Acting President

ARTHUR H. HARLOW,
Secretary.

RESOLUTION ON THE DEATH OF SIDNEY S. PRINCE

At a special meeting of the Board of Trustees of The Mount Sinai Hospital, held on July 20th, 1929, an announcement was made of the death of their colleague, Sidney S. Prince, whereupon the members present gave expression to their sentiment in the following minute:

"We have been greatly shocked at the sudden and untimely death of our fellow member, Sidney S. Prince, who has served the Hospital for fourteen years as Treasurer and Trustee.

"Throughout his service he evidenced the deepest interest in all the various activities of our Institution and rendered invaluable service by his sound, keen judgment. His encouragement of the scientific work of the Hospital was a real contribution to its progress. During his term as Treasurer many problems were presented for his solution and no time nor effort was deemed too much when the interests of the Hospital were at stake.

"In many ways he displayed his generosity when the need arose, and the Institution has indeed lost in him a loyal and devoted friend, and the community a splendid citizen. We, who have been associated with him for so many years, had learned to admire and respect him, and to value his friendship most highly.

"To his bereaved family we tender our sincere sympathy for the great loss which they have sustained."

It was resolved that the flag of the Hospital be placed at half-mast until after the funeral and that an engrossed copy of these resolutions be sent to his family.

LEO ARNSTEIN,
Acting President.

ARTHUR H. HARLOW,
Secretary.

RESOLUTION ON THE DEATH OF M. SAMUEL STERN

At a meeting of the Board of Trustees of The Mount Sinai Hospital, held on November 12th, 1929, the President announced the death on October 28th, of Mr. M. Samuel Stern who served as a Director of the Hospital from 1903 to 1910 and the members of the Board expressed their sentiments in the following minute:

"We have heard with sincere regret of the death of Mr. M. Samuel Stern who served our Institution faithfully, as a Director, for seven years, from 1903 to 1910.

"During his term of service he always evinced the deepest interest in the affairs of the Hospital and in the welfare of the patients entrusted to its care and for many years after his resignation he maintained a continued interest in our work.

"As a citizen of New York he rendered exceptional service, particularly on the Board of Education on which he occupied the office of Vice-President for many years, and his work was highly appreciated by those in authority and by those who took a deep interest in the education of our younger generation.

"Those of the members of our Board who served with him and those who knew him outside of his Hospital activities honored and respected him and his death will leave a void in the community which he graced.

"To the bereaved members of his family we tender the sincere expression of our heartfelt sympathy."

It was also resolved that an engrossed copy of these resolutions be transmitted to the members of his family.

GEORGE BLUMENTHAL,
President.

ARTHUR H. HARLOW,
Secretary.

REPORT OF THE ACTIVITIES OF THE MEDICAL STAFF FOR THE YEAR 1929

The President of the Medical Board submits the following report of the activities of the medical and surgical staff of the Hospital. There has been during the current year the same activity on the clinical services as has characterized previous years.

Lectures: During the year the following lectures of general medical interest were delivered in the Blumenthal Auditorium:

1. The two William Henry Welch lectures were delivered by Dr. Simon Flexner, Director of the Rockefeller Institute for Medical Research, on the subject of "Twenty-five Years of Epidemic Poliomyelitis."
2. Dr. Temple Fay of Philadelphia lectured on "Studies in Epilepsy; Etiology and Treatment."
3. The 1928-1929 Edward Gamaliel Janeway lecture was given by Dr. Alexis Carrel, member of the Rockefeller Institute for Medical Research, on "The Nature of Malignant Cells."
4. Professor Julius Tandler, Professor of Anatomy, University of Vienna, gave two lectures: one on "Anatomy of the Heart (in German); the other on "Constitution."
5. Professor I. Snapper, Professor of Internal Medicine, Amsterdam, delivered a lecture on "Hyperparathyroidism and Skeletal Changes."
6. Professor Fritz Silberstein of the Universitäts-Institut für Experimentelle Pathologie in Vienna, delivered a lecture on "The Relation of Rest-Nitrogen Fractions in the Blood to Protein Metabolism."
7. Dr. G. V. Anrep, Lecturer in Physiology, Cambridge, England, delivered the 1929-1930 Edward Gamaliel Janeway lectures. The subjects were:
 - (a) "The Dynamics of the Coronary Circulation."
 - (b) "The Regulation of the Coronary Circulation."
8. Professor A. Schlossman of Düsseldorf, Germany, lectured on "Encephalitis in Children, with especial reference to Post-Vaccinal Encephalitis."

REPORT OF THE MEDICAL STAFF

Other lectures given were—by Dr. G. V. Anrep on “Respiratory Variations of the Heart Rate,” by Professor Arthur W. Meyer of Berlin on “Surgical Treatment of Pulmonary Embolism,” and by Professor Lina Stern of Moscow on “Blood Tissue Barriers with special reference to Nervous System.”

The Laboratories: A detailed description of the work of the Laboratories is recorded elsewhere in the Report of the Committee on Laboratories. The constantly increasing need for space for the purpose of conducting scientific investigation has overtaxed the Laboratory Building to such an extent that many activities have been carried on in parts of the Hospital more or less remote from the central laboratory.

The value of the weekly clinical pathological conferences has steadily increased so that the audiences now average over 300. Some of the work presented has been published in *International Clinics* and other work is in print for next year in the *Medical Clinics of North America*.

Following is a list of papers published in 1929, dealing with work in the laboratories during the current year:

1. Studies on B. Typhosus Toxic Substances. II. The Effect of Sera upon the Factors Determining Local Skin Reactivity to B. Typhosus Culture Filtrates.

—*Journal of Experimental Medicine*.

2. Positive Blood Cultures in Non-Specific Ulcerative Colitis.

—*Journal of Laboratory and Clinical Medicine*.

3. Improved Method of Preparing B. Typhosus Toxic Substances Necessary for Local Skin Reactivity.

—*Proc. Soc. Experimental Biology and Medicine*.

4. Studies on B. Typhosus Toxic Substances. III. The Effect of Sera upon the Injury Producing Factors of the Phenomenon of Local Skin Reactivity.

—*Journal of Experimental Medicine*.

5. Preparation of Meningococcus Toxic Substances Necessary for the Phenomenon of Local Skin Reactivity.

—*Journal of Infectious Diseases*.

6. Ammonium Sulphate Precipitation of B. Typhosus Toxic Substance in the Phenomenon of Local Skin Reactivity.
—*Journal of Infectious Diseases.*
7. Therapeutic Antimeningococcus Serum-Measuring of their Neutralizing Potency by means of the Phenomenon of Local Skin Reactivity.
—*Journal of the American Medical Association.*
8. A Single Central Catalysing Station to Produce Anaerobiasis. —*Journal of Laboratory and Clinical Medicine.*
9. Septic Ulcer of Meckel's Diverticulum and Ileum.
10. Chromaffin Cell Tumor of the Adrenal Medulla.
—*Archives of Pathology.*
11. Pathways of Infection in Labyrinthitis, Intracranial Complications Associated with Diseases of the Sphenoid Bone.
—*Archives of Oto-laryngology.*
12. Meconium Ileus. —*American Journal of Pathology.*
13. Pre-Retinal Artery. —*Archives of Ophthalmology.*
14. Significance of Sclerosis of Fundus Oculi.
—*L. I. Medical Journal.*
15. Ocular Pathology of Periarteritis Nodosa.
—*Archives of Ophthalmology.*
16. On the Existence of Para-Indole.
—*Berichte Deutsche Chem. Ges.*
17. An Enzymatic Method for the Detection and Estimation of Tyrosine in Urine.—*Journal of Biological Chemistry.*
18. Attempts to Reduce Rheumatic Fever in Animals.
—*Journal of Experimental Medicine.*
19. Sedimentation Time of Blood in Jaundice.
—*Journal of Laboratory and Clinical Medicine.*
20. Gaucher's Splenomegaly with a Special Reference to Skeleton Changes.
—*Journal of the American Medical Association.*
21. Clinical Application of the Female Sex Hormone Test.
—*New York State Journal of Medicine.*

22. The Female Sex Hormone. (A book covering the entire subject).
23. The Simultaneous Production of Two Hormones by the Corpus Luteum. —*Americal Journal of Physiology*.
24. A Method for Assay of Ovarian Hormone in Blood and Urine and Relation of Assay to Menstrual Cycle.
—*Proc. Soc. Experimental Biology and Medicine*.
25. The Arterial Supply of the Kidney in Nephritis.
26. The Arterial Supply of the Congenital Polycystic Kidney and Its Relation to the Clinical Picture.
27. Hodgkin's Disease: Obstructive Jaundice due to Common-Duct Disease.
28. Degenerative and Diffuse Inflammatory Diseases of the Liver.
29. Left Vagus and Partial Gastrectomy for Duodenal Ulcer with Hyperacidity. —*Annals of Surgery*.
30. Acute Brain Tumors (Tumors of the Brain with an acute onset and rapidly progressive course).
—*Archives of Neurology and Psychiatry*.
31. The So-Called Round Cell Infiltrations. II. In Syphilis of the Central Nervous System. —*Archives of Pathology*.
32. A Fulminating Case of Chorea.
—*Archives of Neurology and Psychiatry*.
33. Metastatic Carcinoma of Brain and Spinal Cord Simulating Polyneuritis.
—*Archives of Neurology and Psychiatry*.

Surgery: The surgical services have continued their intensive studies in the special clinical groups assigned to them previously.

On the service dealing with neurosurgical conditions more radical efforts have been made at the extirpation of tumors of the brain. There has also been made an extensive study of meningitis complicating fractures of the skull. Other studies have been made in the treatment of chronic osteomyelitis of the skull. Earlier and more effective surgical treatment of abscess of the lung has been developed with improvement in the operative treatment of

ruptured lung abscesses. Studies were conducted on the diagnosis of clean and infected wounds. The previous studies in the diagnosis and conservative treatment of thrombo-angiitis obliterans have been continued. Marked improvement in the care of patients suffering from septic conditions and of patients in shock has been noted following prolonged continuous intravenous administration of glucose solution. In collaboration with the laboratories the study of anaerobic infections with special reference to lung abscesses has been continued. The pathological changes in lung abscesses have also been studied in collaboration with the Department of Morbid Anatomy. Further studies, based on autopsy examinations, have also been made on immediate causes of death after various operative procedures.

Publications by members of the surgical services include the following:

1. Factors of Safety in Resection of the Stomach for Gastro-duodenal Ulcers. —*Annals of Surgery*.
2. Osteomyelitis of the Vertebrae. —*Annals of Surgery*.
3. Treatment of Pilonidal Cysts and Fistulae.
—*Surgical Clinics of North America*.
4. Nitrite Reaction as an Indication of Urinary Infection.
—*Journal of Urology*
5. Diagnosis and Treatment of Chronic Tuberculosis of the Kidney. —*Journal of the American Medical Association*.
6. Total Cystectomy and Partial Prostatectomy for Infiltrating Carcinoma of Neck of Bladder.
—*Annals of Surgery*.
7. Cancer of the Bladder. —*Medical Journal and Record*.

Gynecology: A decided change in the types of disease conditions seen has been observed in this department. This has been shown by a considerable increase in the number of inflammatory cases, fibroids of the uterus, ectopic gestation, and the increased incidence of cancer of the cervix. This change parallels the observed changes in the character of the neighborhood population during the past few years.

REPORT OF THE MEDICAL STAFF

The new plastic operation devised by members of the staff for the formation of a vagina in case of congenital absence of same has given gratifying results. Modification of the operation of Dr. Polk for the cure of cystocele in selected cases has also proved satisfactory.

The special morning clinics, started a year ago in the Out-Patient Department, are functioning well and meet a need for more intensive studies of clear cut groups of cases. Patients have been benefited and research along these lines has been stimulated.

The results of studies which have been made of the blood shed during menstruation have been of considerable help in the diagnosis of peculiar bleeding conditions in that a differentiation could be made between menstrual and other blood. The studies on sterility with special reference to the peristaltic movement of the Fallopian tube have been continued. A study has been completed of the vaginal flora by the aid of which the gravity of leucorrheal discharges, and at times the diagnosis of pregnancy, has been facilitated.

Laboratory studies of the female sex hormone have been continued. Investigations have led to the development of a technique, by means of which in many instances a urine test could be substituted for the evaluation of the female sex hormone.

The gynecological service has devoted much time to post-graduate teaching. A special effort has been made in the teaching of gynecological pathology for which the service accumulated a large collection of gross specimens and microscopical material.

The application of X-ray for the induction of abortion in patients gravely ill with chronic diseases, such as severe tuberculosis, advanced kidney disease, and non-compensated heart disease, has proved to be of great value in avoiding fatalities in these debilitated patients. This therapeutic intervention is simple and harmless. The close cooperation between the gynecological service and the X-ray department in this method of therapy as well as in the treatment of malignancy in the genital tract has been of immense benefit to patients.

Medicine: The medical services have been busily engaged in many investigations of promise. Studies were carried out on infectious arthritis, lobar pneumonia, pain sensitivity in ulcer,

ulcerative colitis (serum therapy), the relationship of tobacco to gastric and duodenal ulcer, periarteritis nodosa. The chemo-therapy of new chemical compounds has been further investigated. The study of bacteremia in subacute bacterial endocarditis as related to chills, temperature and transfusion, begun last year, was continued as appropriate cases were found. The work on the diagnostic value of urine in typhoid fever was carried forward. An investigation was made of the various problems that arose in the diabetic clinic during the past year. This centered on various modifications of diet, particularly high carbohydrate feeding, and an attempt to analyze the indications for these procedures. Another problem was the varying susceptibility of individuals to insulin, and the varying susceptibilities of the same individual over a period of time. Others were the study of fat atrophy due to insulin administration, the association of pentosuria with true glycosuria, and the etiological factors in connection with obesity, particularly in reference to pregnancy.

There has been marked progress in the organization and development of the activities of the medical clinics in the Out-Patient Department, to the great advantage of the patients and the clinic staffs. It has permitted an increase of new dispensary worthy patients that have been admitted and has raised the standards of diagnosis and treatment of the sick in the Out-Patient Department to the levels obtainable in the Hospital.

The following papers have been published by various members of the staff:

1. The Clinical Aspect of Aputrid Pulmonary Necrosis.
—*Archives of Internal Medicine.*
2. A case of General Infection with a Diphtheroid Bacillus complicated by Diphtheroid Meningitis.
—*Journal of the American Medical Association.*
3. Blood Transfusion in Septic Disease.
—*George Blumer Edition of Billings-Forscheimer's Therapeutics of Internal Diseases.*
4. Differential Blood Cultures.
—*Journal of the American Medical Association.*
5. A Study of Obesity.
—*Journal of the American Medical Association.*

REPORT OF THE MEDICAL STAFF

- 6, The Arterial Supply of the Kidney in Nephritis.
7. The Arterial Supply of the Congenital Polycystic Kidney and its Relation to the Clinical Picture.
8. Hodgkin's Disease: Obstructive Jaundice due to Common Duct Disease.
9. Degenerative and Diffuse Inflammatory Diseases of the Liver.
10. Hypertension and Nephritis—a Monograph published in book form.
—*Lee & Febiger.*
11. The Cause of Hypertension of Greater Circulation.
—*Journal of the American Medical Association.*
12. The Cause of Arteriosclerosis.
—*Journal of the American Medical Association.*
13. Excretion of Neutral Red in the Stomach in Achylia Gastrica.—*Journal of the American Medical Association.*
14. Gastric Secretion after Partial Gastrectomy for Ulcers.
—*American Journal of Surgery.*
15. Consideraciones Generales Sobre Gastro Enterologia.
—*Vida Nueva, Habana, Cuba.*
16. Clinical Features of Air-swallowing.
—*Journal of the American Medical Association.*
17. Myxedema Heart. —*American Heart Journal.*
18. Gallop Rhythm in Hypertension.
—*Archives of Internal Medicine.*

Other medical studies were made and will be continued on the following:

1. Clinical Observations on the Symptomatology of Failure of the Left Ventricle.
2. Experimental Study of the Effects of Cincophen on the Liver.
3. Studies on Capillaries and Venous Pressure.
4. Experimental Studies on Ulcer.

5. Capillary Pressure Studies, directed more specifically to physiological and morphological changes in various disease states.
6. Changes of the first heart sound in Hypertension.
7. The Anaerobic Pulse Wave in Aortic Stenosis.
8. Clinical Phases of Various Pulmonary Diseases, particularly tumors of the lung and benign pulmonary bleeding. The relation of the latter to the early development of bronchiectasis.
9. The Feasibility of early operation of Acute Lung Abscess (with surgical staff).

Pediatrics: During the past year the pediatric service has continued its investigation of problems of previous years and has added others. Studies in skin reactivity in asthma have been conducted in the asthma clinic. The study in epilepsy was continued. The effect of tonsillectomy on diphtheria immunity was investigated with interesting results. The treatment of juvenile diabetes was continued and resulted in several publications of papers on diabetes and related subjects. Other studies were made on the effect of viosterol on rickets, on the blood chemistry and metabolism of renal rickets and on the mode of action of insulin in animals. In the cardiac clinic, the life history of the rheumatic cardiac child was the subject of a comprehensive investigation.

The following papers were published:

1. Asthma in Children. VIII. A Comparative Study of the Direct and Indirect (Local and Passive Transfer) Methods of Skin Testing with the Scratch and Intradermal Technics. —*American Journal Diseases of Children.*
2. Effect of Tonsillectomy and of Adenoidectomy on Diphtheria Immunity.—*American Journal Diseases of Children.*
3. Bacteremia and Skin Manifestations in Lipoid Nephrosis. —*American Journal Diseases of Children.*
4. Pathologic Changes in the Large Interlobar Fissures in Children. —*American Journal Diseases of Children.*

REPORT OF THE MEDICAL STAFF

5. Basal Metabolism of Children of Abnormal Body Weight.
I. Basal Metabolism of Overweight Children.
—*Journal of the American Medical Association.*
6. Basal Metabolism of Children of Abnormal Body Weight.
II. Basal Metabolism of Underweight Children.
—*American Journal Diseases of Children.*
7. Treatment of Juvenile Diabetes.
—*American Journal Diseases of Children.*
8. A Summer Camp for Diabetic Children.
—*Journal of the American Medical Association.*
9. The Frequency of Atrophy of the Subcutaneous Fat
Following the Injection of Insulin.
—*American Journal Diseases of Children.*
10. Diphtherieschutzimpfung in den Vereinigten Staaten von
Nordamerika. Ihre Grundlagen, Organisation und
Ergebnisse.

The following papers were published by members of the neurological service:

1. Diabetic Exophthalmic Dystosis.
—*Archives of Neurology and Psychiatry.*
2. The Sciatic Syndrome.
—*Archives of Neurology and Psychiatry.*
3. The Psychiatric Aspect of Drug Addiction.
—*New York State Journal of Medicine.*

Physical Therapy: A number of articles, based on clinical observations made in the Hospital, have been published by this service:

1. Gangrene of the Foot. —*American Journal of Surgery.*
2. General Principles in the treatment of Fractures from the
Standpoint of the Physico-Therapist.
—*American Journal of Surgery.*
3. Physical Therapy in Skin Ulcers.
—*American Journal of Surgery.*

Otology and Laryngology: Apart from its routine ward work, the otological service used its newly acquired facilities in the laboratory for the examination of its extensive pathological material. Studies have been made of this material and a series of publications based on these examinations are about to be published.

In laryngology the routine was supplemented by an increase in the number of major laryngological operations. In addition, bronchoscopic studies of all medical diseases were continued. Special attention was paid to the use of radium in the treatment of cancer and other diseases of the lung, and cancer of the esophagus.

Ophthalmology: This service initiated pathological studies of acute tuberculous periphlebitis of the retina and optic nerve of Niemann-Pick's disease and of retinal petechia in subacute bacterial endocarditis. The department's work in the pathological laboratory was greatly enhanced by the employment of a part time technician whose salary was met by a fund raised by friends of the ophthalmic service. In addition, the technique of fundus photography has been developed and many prints obtained. The elaborate instrument required for this purpose was generously donated by a member of the Board of Trustees. Studies have been begun of retinal blood vessels by means of fundus photography and also of the exophthalmos of Graves' disease.

The following papers were published by members of this service:

1. The Systemic Use of Hypertonic Solutions in Glaucoma.
—*Archives of Ophthalmology.*
2. Anatomic Study of the Pre-retinal Artery.
—*Archives of Ophthalmology.*
3. The Ocular Pathology of Periarteritis Nodosa.
—*Archives of Ophthalmology.*
4. Melanoma of the Iris in Recklinghausen's Disease.
—*Archives of Ophthalmology.*

Radiology: The department of radiology has been particularly active. During the year, a total of 17,303 Roentgen examinations were made as against 15,903 in 1928, and 49,255 films were taken against 42,300. The real significance of the increase in this work

can be best appreciated when it is noted that most of it is due to the greater number of complicated examinations requiring repeated observations and considerable time, such as gall bladder, urinary and gastro-intestinal cases, and examinations by means of injection of a contrast medium, principally iodized oil. During the last month the use of the new method of intravenous urography was introduced in the study of the urinary tract; this will be dwelt upon at much greater length in our next annual report. We may, however, at the present time record our belief that this constitutes a very important contribution to clinical medicine in general and to urology and roentgenology in particular. By means of the intravenous injection of an organically-bound iodine compound (uroselectan) which has been found to be absolutely non-toxic, a simultaneous morphological delineation and functional estimate of the urinary tract on both sides is made possible without the use of the older method of cystoscopy and the passage of ureteral catheters.

Studies of the bronchial tree in post-mortem lungs were continued. Aid was given in the study of the effect of irradiated Ergosterol or "Viasterol" on rickets. Roentgen examinations were made at stated intervals which permitted observation of the various stages in the disease; striking progressive changes in the cure of rickets were visibly demonstrated by this method.

The continued use of X-ray control of the removal of renal calculi in the operating room has added proof of its great importance. For this work an aluminum cassette was especially designed by and constructed for the department. Made of metal, it can be kept sterile and protects the films against moisture.

The Roentgen department has aided materially in the early diagnosis of lung tumors. These are now recognized with increasing frequency and at an earlier stage than heretofore, thereby holding forth greater promise for therapy in this disease.

The wiring of the wards and floors of the Hospital providing alternating current of sufficiently high amperage to operate a bedside machine of higher capacity was begun and will be completed in 1930. This will permit X-ray examination at the bedside of those patients who are too ill to be brought down to the department.

In October a change in the professional personnel was initiated. Heretofore the externships were given to graduate physicians for a period of one year, either in the diagnostic or in the therapeutic division. There were three rotating externships in the former and one externship in the latter. The new plan reduced first the number of externs in both divisions from four to three. It lengthened the term of the appointment of each extern from twelve months to eighteen, and it gave each extern a service of twelve months in diagnosis and six months in therapy.

Radiotherapy: In the Radiotherapy division there has been noted a definite, though moderate, increase in the number of patients, which indicates an increased appreciation of this work on the part of the clinical services of the Hospital.

Due to the additional 150 mgs. of radium element donated in 1928 (bringing the total to 260 mgs.) more patients were treated than in previous years. The number of milligram hours were nearly doubled, 243,775 to 449,047, with a resulting decrease in the amount of purchased radium emanation (22,748 to 18,587 millicuries). The addition of this radium has been of inestimable value to the department, enabling it to treat cases which formerly, because of the lack of radium in sufficient quantity, could not be treated here, and decreasing the length of stay of these patients in the Hospital. Were more radium available the efficiency of the department would be enhanced by obtaining better and quicker results, by shortening further the stay of patients in the Hospital, and by the ability to treat a greater number of patients during a given period of time.

The clinical conditions treated were practically similar to those in previous years. The number of dermatological cases was about one-third of the total, malignancies approximately 30 per cent., and the remainder a miscellaneous group of non-malignant diseases including acute and chronic inflammatory conditions, gynecological, neurological and metabolic disorders.

Therapeutic abortions were continued with the same success. In conjunction with the pathological laboratory, histological studies were made on the embryos for changes caused by radiation. The number of neurological cases referred to this department were increased during the year. The palliative results obtained in these conditions which are not amenable to other forms of therapy were

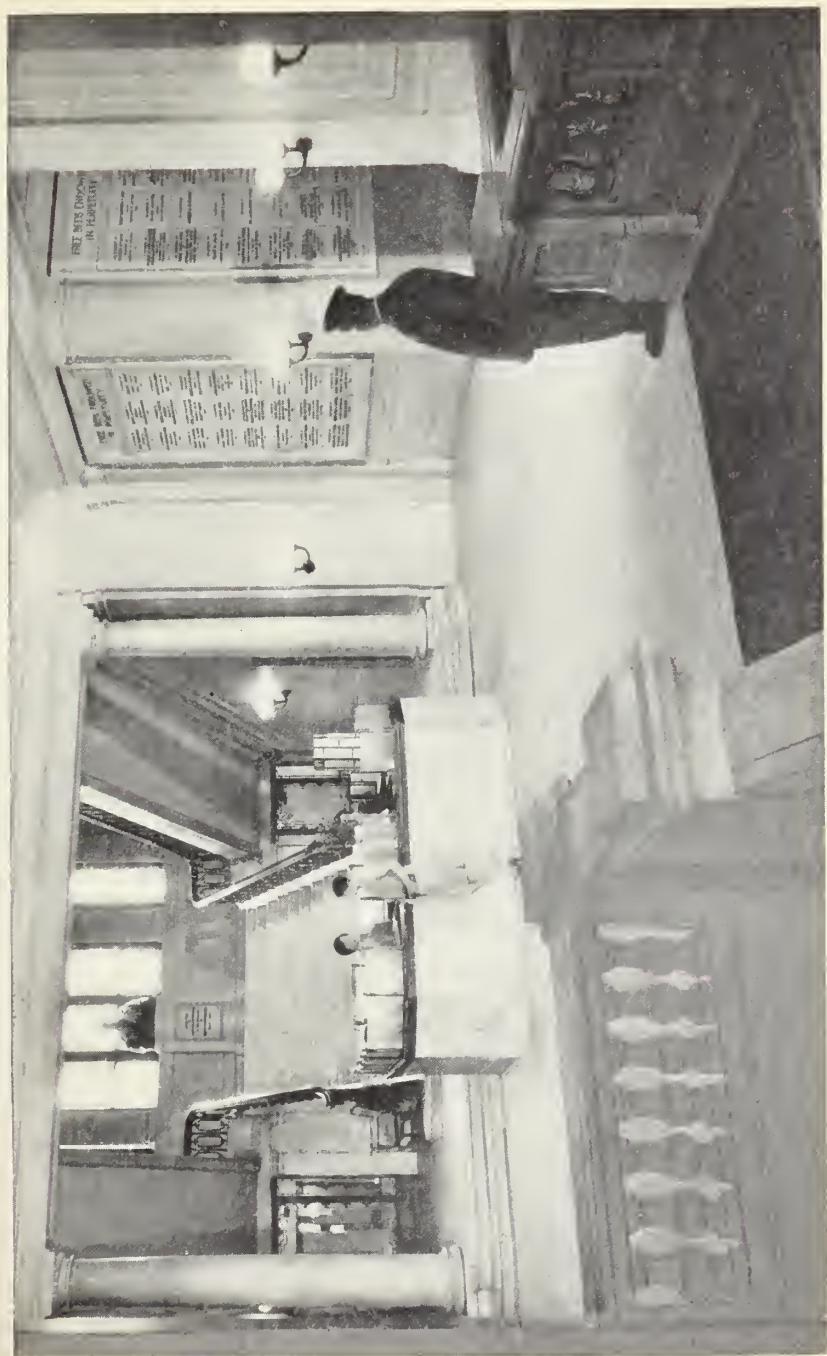

REPORT OF THE MEDICAL STAFF

gratifying. With the co-operation of the clinical service an increasing number of cases of hyperthyroidism were treated. While their number is as yet too small for definite conclusions, the results thus far have been satisfactory. The treatment of disease of the blood forming organs continues and the number of endocrine disturbances referred for treatment is increasing. The results, while chiefly palliative, have established radiotherapy as a recognized method of treating these cases.

The follow-up clinic helped greatly in the work. The assignment of a social worker enabled the department to follow cases and study the end results. The worker is especially valuable in helping patients to keep their appointments regularly, thus permitting the discovery of metastases and enlarged glands much earlier than heretofore. From time to time members of the attending staff by whom patients were referred saw them in consultation with the members of the department; thereby the status of the patients was established from various angles, and the desirability for further treatment was determined.

ISIDORE FRIESNER, M.D.,

President of the Medical Board.

Duncan A. Holmes—For Pneumonia Research Fund.....	5,000.00
Mrs. Fannie C. Korn—For Fannie C. Korn Fund for the estab- lishment and maintenance of a splint and apparatus room for the use of the Orthopedic Service—In memory of Henry Korn	5,000.00
Nathan Hofheimer Foundation, Inc.—For Research in Anaerobic Bacteriology	4,000.00
Lucius N. Littauer Foundation, Inc.—For Study of inflamma- tory and degenerative diseases of the heart and blood vessels, to be expended in the Central Laboratory under the Director of Laboratories.....	3,700.00
Dr. Albert A. Berg—For Gastro-Enterology Research.....	2,500.00
Lieut. Gov. Herbert H. Lehman—To pay for mobile machine and accessories for Electro-cardiographic Research Work on the medical wards.....	2,500.00
Manhattan Research Foundation—For Bacteriologist's Tech- nician Salary Account.....	2,400.00
Mrs. Addie W. Homan—For the Isidore Hershheim Fellowship in Chemistry—In memory of her father.....	1,500.00
Through Dr. Julius Wolff—For Eye Pathology Technician's Salary Account	1,500.00
The Dr. Herbert L. Celler Fellowship Foundation—For the Dr. Herbert L. Celler Foundation Fellowship Fund.....	1,000.00
Isaac D. Levy—For Gastro-Enterology Research.....	1,000.00
Lucius N. Littauer—For Gastro-Enterology Research.....	1,000.00
Ludwig Vogelstein—For Gastro-Enterology Research.....	1,000.00
Joseph G. Mayer—For Pneumonia Research Fund.....	1,000.00
Philip J. Goodhart—For Oxygen Therapy Apparatus.....	720.00
Adolph Lewisohn—For Nordensen Camera.....	656.50
Anonymous—For Research in Anaerobic Bacteriology.....	600.00
Misses Ida and Rose Frankenheimer—For the L. S. Franken- heimer Fellowship Fund in Pediatrics.....	600.00
Carried forward	\$94,426.50

DONATIONS FOR SPECIAL PURPOSES DURING YEAR 1929

(Continued)

Brought forward	\$94,426.50
Mrs. Charles Klingenstein—For salary of Technician for Otological Research	600.00
E. D. Levinson—For Pneumonia Research Fund.....	500.00
Moritz Rosenthal—For the Edward Gamaliel Janeway Lecture Fund	500.00
Friends of the late Dr. A. Philip Zemansky, Jr.—For purchase of books for the Hospital Library.....	439.00
Lawrence J. Hirsch—For Research Fund.....	265.44
Anonymous—For the Edward Gamaliel Janeway Lecture Fund Income Account	250.00
Dr. H. G. Friedman—Towards the printing of the Electro-cardiographic Films	250.00
Mrs. Leo B. Gutman—For Research Fund—In memory of her husband, Leo B. Gutman.....	250.00
Mrs. Milly Frank Mayer—For Pneumonia Research Fund.....	250.00
Mrs. Etta K. Guinzburg—For Research Fund.....	100.00
Henri J. Nothmann—For Research Fund.....	100.00
M. W. Amberg—For salary of Technician for Otological Research	100.00
First New Sandez Society, Inc.—For Research Fund.....	50.00
Mr. and Mrs. Oscar I. Mayer—For Research Fund—In commemoration of Mrs. Charles Klingenstein's birthday.....	25.00
Philip Davidson—For Research Fund.....	15.00
Total	<u>\$98,120.94</u>

TRUST FUNDS FOR SPECIAL PURPOSES

Florette and Ernst Rosenfeld Foundation—Founded for the establishment and support of a Department for Radium and Radiotherapy.	
Original Donation	\$76,000.00
Income to December 31, 1929, including interest on principal, income from investments, etc.....	24,790.70
	<u>100,790.70</u>
Cost of Installation of Equipment, Cost of Radium and maintenance of the Department of Radium and Radiotherapy to December 31, 1929.....	50,653.20
	<u>\$50,137.50</u>

ENDOWMENTS FOR SPECIAL PURPOSES

Benjamin Altman Fund	\$100,000.00

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

During the year 1929, a total of 207,949 visits were made by patients to the Out-Patient Department. Of these, 94,210 were registered at the morning clinics and 113,739 at the afternoon clinics. As in previous years, these new totals reached new high levels. In tabulating these statistics, we have followed the practice of former years of counting only those clinics actually housed in the out-patient buildings. In order, however, to obtain a complete picture of this work, and for purposes of comparison with many other out-patient departments using other statistical formulæ, it should be noted also that out-patients made 9,257 visits to the X-ray Department, that the Radiotherapy Department was visited 7,744 times, that the Basal Metabolism Department can be credited with 439 visits, that the Children's Health Class reports 2,137 visits, and the Accident Ward, although located in the Hospital, gave emergency treatment to 9,723 patients who would otherwise have been received in the Out-Patient Department had they applied at hours and on days when it was open. Follow-up visits also account for 8,688 visits. To add all of these to the Out-Patient Department figures, would make a grand total of 242,826 ambulant patient visits to all departments of the Hospital.

Fewer new cases were treated in 1929; the 41,881 cases listed are 417 less than the preceding year. With the increase in the number of total visits, this decrease in new patients indicates a higher rate of return visits per patient which, as indicated in previous reports, is as satisfactory an index of the quality of medical work and satisfaction of the patients as is available for use at this time.

The clinics were open on 303 days; the daily average attendance of patients was 686, with the maximum of 941 on one day. An average of 98 physicians was in daily attendance, supported by 18 nurses and 12 volunteers, these in addition to the regular staff of social workers, druggists, technicians, clerks, orderlies, and others.

For the first time the downward trend in the number of drug prescriptions filled was checked. There was a slight rise, probably accounted for by the introduction and greater use of newer forms of drug therapy including insulin, special digitalis preparations

supplied by the New York Tuberculosis and Health Association, and others. There are no signs in this increase of a return to the former era of placebos and other forms of useless drug therapy.

The most interesting change during the year occurred in the Medical Department, resulting in an increase in the size of the staff of the afternoon clinics and the appointment of more experienced physicians. Their work was under the constant direction of a medical staff equal in rank to the medical staff of the Hospital. The number of new patients that could be seen every afternoon was increased from 6 to 20. The introduction of an admitting and medical classification office on the ground floor of the building with an experienced physician in charge resulted in a great increase in efficiency and in a marked improvement in the character of patients admitted for diagnosis and treatment.

This new admitting clinic found itself faced with the daily afternoon task of classifying approximately 40 new patients, in addition to the large number of old patients who came without appointments or with new complaints. The service was organized by assigning 12 physicians of junior rank as admitting officers, each of whom served in rotation in this capacity for one day in two weeks. During the two hours of admitting, this physician interviewed, and examined when necessary, all new patients and then classified and distributed them into five general groups, as follows:

1. For the general medical clinic.

Two new patients were assigned to each physician. When the quota of new patients for the day was filled, the admitting physician prescribed temporary treatment for all others and made appointments for a future date. Each new patient was thus assured of immediate medical consultation with an experienced physician and the necessity of a waiting list of patients who, under the old regime would have been dismissed without any treatment, was eliminated. In determining the priority of appointment, the medical needs of the applicants were given first consideration, patients with more serious ailments receiving precedence. When admitted to the medical floor, patients were assigned to a single clinic physician, who, by making appointments for subsequent visits, assured the patient of a continuity of direction of treatment by the same physician.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

2. For non-medical clinics.

Patients presenting symptoms unmistakably referable to surgical, orthopedic, eye, ear, nose and throat, and other services, were admitted directly to these clinics.

3. For special medical clinics.

Patients whose diagnoses obviously fell into the group of the special medical clinics were immediately assigned thereto, thus relieving the general medical clinic of crowding and unnecessary duplication of work.

4. For minor ailments.

This was conducted by the admitting officer, aided when necessary, by an assistant. Medical advice and treatment were given to patients suffering from minor medical conditions not warranting a written detailed history, physical examination, or elaborate clinical study. A record including diagnosis and treatment was kept of all patients treated in this clinic.

5. For immediate admission to the Hospital.

Very ill patients requiring hospital care were sent to the Hospital admitting room, thus sparing them the delay of waiting for an examination at the hands of a clinic physician.

From this description it is seen that the admitting physician saw all applicants, classified them clinically, arranged future appointments, provided care for seriously ill patients without delay, admitted those who were more urgent, and eliminated come-back cases who applied for treatment unnecessarily. Patients were routed correctly to the proper clinics, eliminating the loss in efficiency which resulted previously from misdirection of patients by lay clerks.

At the present time, over 500 new patients are seen each month in the afternoon medical clinic alone. Each of these patients is as important clinically as are the patients in the ward of the Hospital. In some respects they are more important because they present themselves for treatment in the Out-Patient Department in the early and hopeful stages of their diseases when much can still be done for them, whereas patients with similar illnesses who require hospitalization are often in the latter and hopeless

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

stages of their diseases. The total number of these patients treated monthly in this one clinic is over six times the number treated on one of the medical services in the Hospital proper.

The complete medical Out-Patient Department service has had the benefit of direction at the hands of a full attending physician, assisted by the associate attending physicians and a number of adjunct physicians. All are present at each session, are readily available for consultation with the clinical assistants and the admitting physician, and participate intimately in the work of the group. The result has been an improved medical supervision and an increase in educational opportunities available for junior members of the staff.

Following the reorganization of the Medical Out-Patient Department, the Adult Cardiac Clinic was revamped and expanded by a redistribution of rooms. The New York Heart Association charts were used exclusively and the patients grouped in classes according to ages. The adolescent patients who present a peculiar problem in themselves, were assigned to certain days for special care and study. The Children's Cardiac Clinic sessions were changed in order not to interfere with attendance in school. By placing the direction of all three clinics in the hands of one physician, the continuity of treatment of child, adolescent, and adult was made smoother, patients not resisting transfer to other groups knowing that the medical direction continued unchanged. Research on the life history of the rheumatic child, based on the evaluation of the records collected during the past ten years, was resumed with the cooperation of the New York Heart Association, supported by a special grant by a member of the Social Service Auxiliary.

In the Asthma Clinic investigations dealing with relationship between sinus disease and intra-pulmonary infections were continued.

The Gastro-Intestinal Clinic carried on a number of studies, some of which were continued from the previous year. These include the following, the results of which have already been published.

1. Symptoms and gastric secretions of patients on whom partial gastrectomy had been done.
2. Use of histamine and neutral red in achylia gastrica.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

3. Injection treatment of hemorrhoids.
4. Follow-up of ulcer and ulcerative colitis cases.
5. Comparison of history, X-ray, and biliary drainage in chronic gall bladder disease.
6. Pain in ulcer; also constitutional studies in patients with ulcer.
7. Psychic factors in cardiospasm.

Departing from the usual practice, the clinic presented a program at a meeting of a local medical society by presenting cases and reading papers based entirely on the work of the clinic.

Post-operative gastric cases in the Hospital were treated following their discharge from this Hospital in this clinic which took also upon itself the responsibility for the gastric analysis required by patients in all clinics in the Out-Patient Department.

An important change in the work of the Tuberculosis Clinic during the past year was the assignment of two pediatricians to the department on Saturday mornings to study and work with children, thus making expert auxiliary pediatric service available for tuberculous children. At the same time, the assigned physicians from the pediatric division were able to obtain a more intimate knowledge of tuberculosis in children, as all tuberculous cases, adult and children, are referred to this tuberculosis clinic.

The shift in the character of the population to the east and north of the Hospital showed itself particularly in this clinic which restricts admissions according to residence. The increased number of Negro and Porto Rican patients, referred to in previous reports, was still evident. It is of interest to note that tuberculosis in these patients manifests itself differently from the types seen in our former clientele. It is more acute and progressive due doubtless to the lower economic and social conditions existing among them. Because of over-crowding and low earning power, home treatment with them is well nigh impossible. Institutional treatment seems to be imperative, although this has been found difficult because of the shortage of tuberculosis beds in municipal hospitals to which most of these patients must be referred. Many of them resist hospitalization and return to Porto Rico. Because of their inability to appreciate the necessity of

sanitary precautions, institutions are needed not only for treatment, but for the purpose of segregation in order to protect others, especially children, against the spread of infection in their over-crowded homes.

Cases of gastric neuroses which came to the Dispensary in large numbers in the past and the treatment of which has been so unsatisfactory, were concentrated in one of the morning clinics for special study. This relatively large group of patients presents an ever recurring problem in general medical and gastric practice everywhere. Patients were assigned to this group after a thorough investigation by means of X-ray and laboratory tests had ruled out organic disease, and after symptomatic treatment had shown no improvement. In this special clinic, the patients are studied along the lines of possible functional or psychic imbalance. The basis of the illness was frequently found to be one of economic or familial maladjustment. Although but recently inaugurated, a summary of 50 cases treated by psychotherapy combined with supportive therapy and dietary control has shown gratifying results.

The increase in the number of medical patients, made possible by the reorganization, brought in its train a number of requests for basal metabolism determinations which were carried out heretofore in the Main Hospital. The Hospital department was unable to handle properly this additional load, and a separate basal metabolism department was opened in the Out-Patient Department.

During the year, the Dermatological Clinic was in the throes of reorganization, following the retirement, because of service limit, of the Dermatologist to the Hospital. New appointments were not made until late in the year when the Out-Patient Department was reorganized on a two-service basis.

The afternoon gynecology clinics continued to devote themselves to general gynecological cases, serving also as an admitting or clearing unit for the group cases to be referred to the special morning clinics. These special clinics enabled the staff to study special clinical groups more intensively with a resultant improvement in service. The studies undertaken included conditions of menopause, uterine bleeding, endocrine disturbances, leukorrhea, sterility, recurrence of fibroids. The follow-up of all hospital

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

cases, especially those treated with X-ray, was continued. The relationship between cervical polypi and malignancy, was also a subject for investigation.

The changing character of the neighborhood population affected the type of patients attending the Pediatric Clinic more than any other clinic. Mothers are prone to bring babies and small children to the clinic nearest to home; adults are not averse to traveling long distances in order to obtain medical care. As a result, the large influx of Porto Ricans north and east of the Hospital during the past few years, has increased the numbers of this race to be found in the Pediatric Clinic.

Apart from the routine curative and preventive work of the clinic, the pediatric staff was able to undertake a number of interesting clinical investigations. These have included studies in skin sensitivity, asthma, epilepsy, renal rickets, the effect of tonsillectomy on diphtheria, immunity in the treatment of juvenile diabetes, the effect of viosterol on rickets, the mode of action of insulin, and basal metabolism studies of children of abnormal body weight. Papers appeared dealing with these investigations and also on lipid nephrosis and behavior changes in children.

The Children's Health Clinic, because of its special social aspects, is reported in greater detail in the report of the Social Service Department. A rearrangement of services using common rooms made possible the assignment of more space to this department with an improvement in its work. The clinic continued to attract the attention of students of various universities and of individuals from all parts of the world interested in problems of child guidance.

The work of the Mental Hygiene Clinic is also described at great length in the report of the Social Service Department. This clinic was the only clinic in the city to receive no criticism following a survey made by the New York City Committee on Mental Hygiene of psychiatric clinics in out-patient departments of all New York hospitals.

The appointment system in this clinic, only partially used heretofore, was completely installed. The work of the department was thoroughly rounded out by the appointment of a certified psychologist. Recreational activities for mental patients repre-

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

sented a new departure in mental hygiene work; this quite apart from the occupational therapy which has been employed for a number of years. While still in its infancy, the results, so far, have exceeded expectations.

The equipment and facilities of the Ear, Nose and Throat Clinic were increased by the addition of a quantity of newer diagnostic and operative instruments. An additional graduate nurse was added to the regular personnel. The perfection of the technique of washing of the maxillary antrum through the natural orifice has resulted in an improvement in the treatment of sinusitis in children. An increased tendency on the part of other clinics to refer patients to this division for consultation and report was noted.

Following a survey of the service rendered by the afternoon genito-urinary clinics, both divisions were combined with no loss in efficiency. The free afternoons were then used to advantage by other clinics.

The Dental Department was visited 9,709 times; 1,129 new patients were listed during the year. The services rendered were divided as follows:

Examinations	2,945
Extractions	2,188
Fillings	889
Pyorrhea	524
Treatments	1,143
Culture	136
Vaccine	72
X-ray	3,296
Orthodontia	412
Mechanical Work	1,453
Oral Surgery	87
Root Therapy	51
<hr/>	
Total	13,196

Post-graduate teaching for qualified graduates in medicine was carried out in the Out-Patient Department to a greater degree than before. Ten courses in the formal Autumn series were con-

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

ducted wholly or in part in the Out-Patient Department. These included courses in pediatrics, medicine, ophthalmology, gastroenterology, gynecology, physiotherapy, cardiology, and neurology. In addition, two extra-curricular courses were given later by request of two groups of students.

In previous reports, mention was made of coming changes in the Out-Patient Department aimed at providing more spacious and comfortable quarters for existing clinics and permitting the addition of several new departments. The plans have progressed slowly because of the necessity of preceding first with the new Semi-Private Pavilion and with other essential services of the Hospital. Preliminary studies, however, have been completed, providing for the conversion of the lower floors of the former Nurses' Home to the Out-Patient Department uses.

The basement will be given over to the Out-Patient Social Service Department and the follow-up clinics. These will be entered by a separate street entrance permitting them to function independently of the Out-Patient Department. The first floor will house an enlarged central clinical Record Room for Hospital records as well as a large medical library for the use of the medical staff. In connection with the Library and Record Room, provision will be made for a number of cubicles in which clinical records and books may be studied without interruption. The second floor will contain a new X-ray department for out-patients as well as the expanded dental division. The third floor will house the neurology and mental hygiene clinics and an enlarged physiotherapy department. No assignment has been made of the fourth floor which it is planned to hold in reserve.

In the present Out-Patient Department, the first floor will be made over entirely as an admitting unit including a Central Record Room for Out-Patient Department records, connected with the clinic floors by means of mechanical conveyors. The Admitting or Medical Classification Clinic will be provided with booths suitable for the medical examination of patients.

The second floor will be given over entirely to surgery and surgical specialties. The east side will provide history, examining, and operating rooms for minor surgery; the west side will house the Thrombo-Angiitis Clinic and an expanded orthopedic department including a commodious plaster room.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

On the third floor, the Gynecological Clinic will be enlarged and provided with better toilet and patient dressing facilities as well as cubicles for history taking. The Genito-Urinary Clinic will be expanded by the capture of an additional room fitted up for female cases. The present cystoscopic rooms will be modernized and equipped with an X-ray unit.

The fourth floor will be assigned entirely to the medical division and will house, according to present plans, the medical clinics, plus the cardiac, asthma, tuberculosis, gastro-intestinal, and hematology divisions.

The fifth floor will provide enlarged quarters for the Ophthalmology and Dermatology Clinics. The former will have expanded dark room facilities, and another treatment and examining room. The Dermatology Clinic will acquire a small laboratory, separate rooms for salvarsan therapy, and rooms for lamp therapy, and for X-ray therapy.

To relieve the physicians as much as possible of non-clinical duties, and to conserve their time and energies for actual medical service, the method of handling histories will be modernized. When the Central Record Room becomes a fact, the clinical histories of patients, now scattered throughout the various clinics, will come together in one file and so achieve one of the present day objectives in good medical practice, viz., the maintenance of a balance sheet of the physical assets and liabilities of the patient as a whole in one place together with the complete medical life history of the patient as known to the Hospital. Then may these records be used to their best advantage for the full benefit of the patient and community.

In closing, the Committee wishes to record its grateful appreciation to the medical staff for its constant and loyal service, to the Supervisor and her staff, and to the many volunteers who in so many ways have helped us to carry on during the year.

Respectfully submitted,

ERNST ROSENFELD,

Chairman, Committee on Out-Patient Department.

REPORT OF COMMITTEE ON LABORATORIES

The number of examinations performed in the various laboratory divisions follows:

Bacteriology	16,579
Surgical Pathology	3,014
Morbid Anatomy (Autopsies)	531
Chemistry	6,873
Out-Patient Department	4,821
Private Pavilion	10,864
Semi-Private	955
Hematology	3,122

The year 1929 was a very active one for the Laboratories. This fourth year since the introduction of the full-time system marked the maturing of several important undertakings which were planned since its inception. More physicians have been accommodated in the Laboratories than heretofore and more work of a higher order has been done. A larger number of men were instructed in the various Laboratory branches, and the weekly Clinical Pathological Conferences were conducted before audiences of 300 to 400 physicians. New subdivisions on pathology of the eye and pathology of the ear were added; it is hoped that it will be possible soon to establish a department of dermatopathology.

Sixty-six physicians have worked in the Laboratories during the past year. Of these, 7 were full-time staff members, 2 were part-time paid physicians, 12 were holders of Fellowships and paid full-time Research positions, and 39 held other positions on the clinical service.

The Laboratory has achieved more intimate liaison with the clinicians in the investigation of clinical problems and has extended its facilities to clinical investigations on work supported by six grants kindly donated to the Hospital for the purpose.

Thirty-three articles were published during the year, including articles dealing with important advances on the newly discovered Schwartzman phenomenon, and dealing not only with its fundamental nature but also with the possibility of its practical applica-

tion for therapeutic purposes. Papers were published by the Department of Neuropathology dealing with tumors and various inflammatory conditions of the brain, by the Department of Morbid Anatomy on the pathology of various kidney diseases, liver diseases and diseases of the gastro-intestinal system, and by the Department of Chemistry on new diagnostic methods. Important papers were also published on the female sex hormones; on the etiology of rheumatism; on various blood diseases, and on the physiology of the gastro-intestinal tract.

Twelve articles are at present in the hands of publishers and will be published in 1930. These deal with the pathology of the eye; with micro-chemical technical investigations; with biochemical observations on thrombo-angiitis obliterans; with the female sex hormones and their clinical applications; with various immunological states in disease; with further researches on the Schwartzman phenomenon, and with the pathology of rheumatic fever. A number of investigations are now in progress. These relate largely to the development of fields which have already been opened in this Laboratory in the past.

Apart from the regular post-graduate courses, the Clinical Pathological Conferences, the intra-departmental teaching and the lectures to the House Staff, several members of the staff have lectured before societies both here and outside of New York, chiefly on subjects which will be found in the publications listed elsewhere.

In the matter of teaching it is to be added that the Department of Morbid Anatomy has this year contributed to the training of 21 men. 531 necropsies were performed. The great value of these necropsies in keeping up a high scientific level in the Hospital and in adding to the sum total of medical knowledge cannot be overestimated.

A number of improvements have been instituted during the year. These include:

1. The sub-typing of pneumococci in the Group IV class.
2. The cultivation of the tubercle bacillus for diagnostic purposes.
3. The introduction of the Cecil blood cultures.
4. The improvement in the technic of anaerobic bacteriology.

REPORT OF COMMITTEE ON LABORATORIES

Improvements have been made in the extraction of the female sex hormone from the urine, making the test available for general clinical use. The introduction of our newly discovered tyrosine method opens up an important field in the diagnosis of liver diseases. New micro-chemical methods have improved biochemical reports. The establishment of a follow-up file in surgical pathological material and the publication of the proceedings of the Clinical Pathological Conferences also represent advances.

Respectfully submitted,

GEORGE B. BERNHEIM,

Chairman of Committee on Laboratories.

REPORT OF THE COMMITTEE ON DIETETICS

During 1929, particular stress was laid on co-ordinating and improving the several divisions of this department.

Especial attention was paid to the service to ward patients in correlating the preparation and delivery of food, in standardizing the commonly accepted full, light, soft and liquid diets, and at the same time making them so flexible in practice that variations from the established diets could be possible in selected cases. In achieving this ideal, members of the medical staff co-operated freely with suggestions and valuable advice in establishing a chart of standard diets for use throughout the wards of the Hospital.

In order to permit some freedom of choice in ordering from these standard diets, special printed forms were devised to permit the nurse in charge to order a diet individually for each patient from the daily card. The daily menus for the four standard diets are posted on each ward a day in advance; from these the nurses in charge indicate the food requirements for each patient by name, and add thereto extra items for those patients whose special needs cannot be met from the standard list. The diet charts are prepared in duplicate; one is sent to the Dietary Department to serve as a requisition for food requirements for the next day on the ward, the duplicate copy is retained on the ward and serves as a list of orders for use the next day in serving these meals. This convenient arrangement assures the serving of prescribed food to the patient, even though new nurses may be called upon to make up the trays.

The service has been simplified still further by the adoption of standard-sized scoops and ladles in the kitchen which are correlated with standard serving measures on the wards. It is expected that this method will result in a more economical and attractive service. The major improvement, however, which has been accomplished by these changes has been service of food to patients in accordance with the physicians' orders and in accordance, so far as is practicable in group feeding, with the patients' inclinations and desires.

A number of years ago, the food service to ward patients was markedly improved by the introduction of heat retaining food carts. These were a distinct innovation at the time and are still giving good service. More recent improvements, however, in this type of food transportation have out-moded the original equipment which is also showing signs of wear. Plans are being

REPORT OF THE COMMITTEE ON DIETETICS

considered leading to the re-equipment of the kitchen with more modern electrically heated food carts.

The value and importance of dietetic instruction to Dispensary patients has been indicated in the past year by the increase in request for this service from several clinics, especially the Children's Clinic. Dietetic service and instruction to patients and parents are requested now not only for those registered in the metabolism clinics, but also for groups of cardiac children, asthmatics, epileptics and others. The need has been so great that one dietitian could no longer handle the work. Two dietitians now serve, one in each department.

More intensive work is now possible in the Adult Diabetic Clinic. New cooking classes have been organized for these patients who show great interest in the instruction. Perhaps one of the most interesting sights in the Hospital is to observe this enthusiastic class of patients with their mothers, wives or sisters seeking information about the proper preparation of foods and means of achieving a variety necessary to relieve the monotony of diabetic diets. The satisfactory results from these classes prompted the beginning of another cooking class for patients in the obesity clinic with encouraging results. The possibility for good in the Out-Patient Department dietetic work at times seems almost unlimited. It is developing so rapidly in usefulness as to bring dietetic instruction of patients to the forefront in importance in out-patient work.

The Private Pavilion kitchen has continued its even tenor with constant improvement in menus, food and service. The number of letters from pleased private patients who have commented in almost universally favorable terms on the character of food service, is evidence of this excellence, besides serving as a constant check to the dietitians on its quality and character.

This report of progress and improvement could not be possible without a devoted and loyal staff of dietitians and employees. The Committee acknowledges this and expresses its appreciation to Miss Adeline Wood, Supervising Dietitian in the Main Dietary Department, and to Miss Rose DeBarber, Dietitian in the Private Pavilion kitchen, their assistant dietitians and their staffs of workers.

Respectfully submitted,

GLADYS GUGGENHEIM STRAUS,

Chairman Committee on Dietetics.

CONSULTANT TO THE BOARD

S. S. GOLDWATER, M.D., Sc.D.

REPORT OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:
Gentlemen:

The report of the School of Nursing for the past year shows several of the highest records yet attained in the history of the School. The first of these is a daily average of 333 student nurses; the second that of 4,530 hours of actual class instruction.

It became evident early in the year that our new Nurses' Home was going to be taxed to capacity in caring for the large classes applying for admission. It was decided, therefore, to proceed at once to change a large out-door sleeping section on the eleventh floor into single rooms for twelve more students.

It was also decided to admit only two classes each year in future, one in February and one in September. The adoption of this plan simplifies, without reducing, however, our teaching program, which has become a most serious and vital consideration because of the greatly increased size of the School, together with certain necessary additions to our curriculum intended to round it out and strengthen its content.

Our daily average of 333 students includes a daily average of 50 probationers. Our highest number on any single day was 404 students; our lowest number was 273. These figures speak for themselves as to the growth and development of the School.

Exclusive of the probationary period, of vacations or of days lost through illness, the 288 students have contributed 96,519 days or nights of nursing care during the past year. In connection with these figures it should be mentioned that 700 days of this nursing service were in the form of individual care to critically ill patients. The patient was thus given the same nursing care as though a graduate nurse had been employed, while at the same time certain advanced student nurses were given the opportunity for valuable clinical nursing experience.

The Biennial meeting of the School of Nursing was held early in April. The following Directors were elected for the term ending April, 1935:

Philip J. Goodhart
Waldemar Kops

William D. Scholle
Eli Winkler

SCHOOL OF NURSING

RECREATION AND ASSEMBLY HALL—SCHOOL OF NURSING

REPORT OF SCHOOL OF NURSING

At that meeting Dr. S. S. Goldwater was appointed to act in an advisory capacity as Consultant to the School of Nursing.

On the 20th of July the School sustained a great loss through the death of Mr. S. S. Prince, for many years a Director of the School of Nursing. Mr. Prince was at all times deeply interested in the affairs and welfare of the School and was ever ready to aid with his sound, keen judgment and his liberal financial support.

On March 6th of this year the Annual Commencement exercises of the School of Nursing were held and the forty-seventh class of students, 76 in number, graduated. With this group our school now numbers 1,784 graduates.

The first division of the Class of 1930, a group of 17 students, admitted to the old Nurses' Home, at the corner of 101st Street and Madison Avenue, in April 1927, was the last class of probationers to enter that building. The next group of 71 students who had been assembled for admission on the 4th of September of that year was notified not to report until September 15th, so that we might have the new Nurses' Home ready to receive them. The students of this class, therefore, might be said to have closed the doors of the old and opened the portals of the new School of Nursing. A supplementary group of 22 students was enrolled late in December, making a total of 110 students who entered our School during that year, 1927.

During the year 1929 over 3,000 letters and personal applications were received asking for information or applying directly for admission to the School. Out of this number, which is unusually large, a group of 194 students was selected for admission, 92 entering in February and 102 in September. Almost without exception this group was made up of high school graduates, a small proportion of the number having had from one to four years of college or normal school work in addition.

Naturally, with this greatly increased number of students we had a proportionately large number of resignations throughout the year, 69 in all: 29 students and 40 probationers, or a total loss of 35 per cent. as compared with our admissions. In view of this fact it is interesting to learn through the official statistics of Miss Harriet Bailey, Secretary of the State Board of Nurse Examiners for the State of New York, that the past year showed

REPORT OF SCHOOL OF NURSING

a loss of 33 1/3 per cent. of the students enrolled in all of the Schools of Nursing throughout New York State. The official record of the State Secretary of Ohio reported a loss of 50 per cent. of the total number of students enrolled. As Miss Bailey states in her annual report, such figures prove most convincingly that a large number of young women are applying for admission to the ranks of our Nursing Schools who have not given sufficient consideration to their choice of a profession or who are not qualified to become nurses.

The reasons for withdrawal of the 40 probationers from our school have been grouped as follows:

Distaste for nursing work (frequently the very young sentimentalists)	15
Unable to meet required educational standard and advised to resign.....	10
Homesickness	7
Unsuited temperamentally to the work of nursing	4
Ill health	2
To be married	2

During the early months of 1929 there was considerable illness among the students with many cases of influenza and tonsillitis and, unfortunately, about 50 per cent. of such cases developed more or less serious ear or antrum trouble. Since that period, however, there has been comparatively little illness and that which has occurred has been of a relatively unimportant character.

One of the important historical events of the year from the nursing standpoint was the filling out for the first time of a complete report of the School of Nursing for the Grading Committee. This was a requirement made of all registered Schools of Nursing throughout the country.

This committee, for the grading of Schools of Nursing, is a national group, composed of representatives from the American Medical Association, the American College of Surgeons, the American Hospital Association, the American Public Health Association and the three National Nursing Associations, plus a selected group of members at large. Its ultimate purpose is the grading of Schools of Nursing. In preparation for such work a five-year study of nursing conditions throughout the country was planned,

as it was felt that the actual grading of Schools could safely rest only upon a foundation of broad and careful study. The three announced actual projects of the Committee are:

1. To determine the supply of and demand for nursing service.
2. To determine just what nurses need to know in the practice of their profession and how they may best be taught.
3. The actual grading of Schools of Nursing by the comparison of the various standards, methods and conditions as they exist in our Schools today.

This movement as a whole promises to be the greatest contribution ever made in connection with nursing problems and progress.

Another high spot in nursing history was reached this year because of the convention held during July by the International Nursing Council in Montreal, Canada, for a period of one week, during which time over 7,000 nurses from all over the world registered. Four representatives from our School Faculty attended this meeting. During the following weeks more than 125 of the foreign guests representing 22 different countries, found their way to New York City where the Red Cross Nursing Chapter acted as the official hostess with the assistance of the large Schools of Nursing and a number of prominent members of hospital and training school boards.

Among the representatives who came to New York, most of whom visited our Hospital at different times, were 38 nurses from England; 7 from Finland; 9 from Scotland, and 6 from Belgium. Probably those in charge of the American Schools of Nursing never realized until this meeting how far ahead of the Foreign Schools were our own Schools but we also learned that the old world had much to teach us and that it could and did produce some marvelous nursing representatives.

The educational report of our School for the year 1929 shows that 4,530 hours of formal instruction were given throughout the year by the Instructors, Medical and Nursing Staff, Dietitians and the Teacher of Massage. The total cost of such instruction for the year has not increased proportionately as it still remains at \$11,500 (exclusive of any maintenance cost), but the increase

in the number of teaching hours has been, because of our larger School, 1,000 hours over that of 1928.

The curriculum of the School of Nursing is a subject that always furnishes food for much thought and anxiety on the part of those responsible for the education and preparation of student nurses. In preparing our educational program every effort has been made to strengthen the content of each course, to simplify it by weeding out non-essentials and to place before the student in her limited hours for such work helpful material of which she can make actual use, realizing that successful nursing education can never be measured by the number of subjects or hours in the curriculum but rather by the finished product of the School of Nursing—the nurse herself. Several experiments in nursing education are to be tried out during this coming year, the most interesting of which is an attempt to introduce a “block” system for all class work following the preliminary course in the first and second year of training.

We are proud of the fact that our ward patients have never had such good nursing care or so much of it as we have been able to give them during the past year. The greatly increased number of our nursing group has made it possible to have sufficient nurses on the ward so that every patient received an average of over three and a half hours of nursing care daily and children an average of over four and a half hours—a high rate and one possible to few hospitals in the country.

Another improvement in ward nursing care has been brought about by placing a graduate head nurse in charge of every large ward in the Hospital, to replace the third year student head nurse formerly used, and by materially increasing the number of night nurses throughout the Hospital. The change to a permanent force of graduate head nurses has been very helpful and satisfactory. Both physicians and surgeons have spoken of the improvement in the nursing service, the patients are happier and more content because of the better understanding of the graduate nurse as to their needs, and the students are greatly benefited by the supervision and bedside instruction given by these enthusiastic young teaching head nurses. It has been possible to fill all positions on the large general wards by the appointment of our own graduates.

A WARD IN THE CHILDREN'S PAVILION

SCIENCE LABORATORY—SCHOOL OF NURSING

REPORT OF SCHOOL OF NURSING

A special course of lectures on Ward Administration from the standpoint of the head nurse was conducted for this group during the early fall and winter months by Miss Carolyn Gray, a recognized authority in the hospital and nursing field. Also, thanks to our fund for higher education, established by Mrs. Emil Berolzheimer as a memorial to Mr. Berolzheimer, for many years a member of the School of Nursing Board, it has been possible for a number of the head nurse group to take part time evening courses in the Department of Nursing Education of Teachers' College.

A large raised tiered platform in the Demonstration Laboratory has been added to the nursing practice equipment and teaching has been not only simplified but also much improved as a result.

The physical education program, under the skilful guidance of our Physical Director, has provided throughout the year the right type of physical activity to meet the individual need and interest of each student. Special emphasis has naturally been placed on corrective gymnastics, but tennis, basketball, swimming, dancing, games and sports have been included in the broad program developed. Under the combined leadership of this department and the Student Council, a Recreational Athletic Club Association has been formed which includes a Glee Club, a Drama Club, a Literary Club and an Outing Club, all of which offer opportunities for social enjoyment and improvement. This highly valuable and interesting work has been financed and made possible through the Albert W. Scholle Memorial Fund, founded by the sons of Mr. Scholle (a former President of the School) as a tribute to his memory; a valuable and a fitting tribute.

The Jacques Wimpfheimer Student Loan Fund has, as usual, had many calls made on it during the past year. This fund is of untold value to young students who need its aid in time of unexpected emergency or financial stress.

The students have enjoyed the usual number of parties, dances, Christmas festivities, etc. As usual, the outstanding feature of the school year was the class day and the class play.

The latest report received from the Mount Sinai Nurses' Alumnae Association shows that the organization is in a healthy condition with a membership of over 650. Their Pension Fund has crept up to \$200,000.00, but this amount is far from being

REPORT OF SCHOOL OF NURSING

adequate for the purpose for which it is needed, as the beneficiaries are increasing rapidly, because of the growing size of the School.

The report of our Graduate Nurses' Registry as usual affords many interesting figures. The daily average of nurses enrolled (all graduates of The Mount Sinai Hospital School of Nursing) was 340.

Total calls received for the year (which would average 21 cases for each enrolled graduate, each year)	7,188
Nurses supplied from our own registry.....	6,011
Cases for which outside registry nurses were called	1,063
Cases for which no nurse could be found.....	114

Of the total number of 7,188 calls only 637 were for cases outside of the Hospital. In other words, 90 per cent. of all calls were for patients being cared for in our own Hospital. These figures indicate clearly the protection and assistance given through our own organization to the graduates of our School. For the entire year of 1929 it was the exception rather than the rule to have any nurse's name stand on the registry roll for more than twenty-four hours.

Miss Maude Lyle, a graduate of the Philadelphia General Hospital and also of the Department of Nursing and Health, Teachers' College, with a splendid executive experience in both hospital and nursing work, has been appointed as Assistant Principal of the School of Nursing.

We are most fortunate in being able to report that, except for this addition, there has been no change whatever in the personnel of the faculty of the School. On behalf of the Board of Trustees I wish to pay a well-earned and much deserved tribute to our efficient Superintendent of Nurses, Miss Elizabeth A. Greener, and to our entire group of loyal and conscientious assistants, instructors, supervisors and head nurses.

I also wish to express the appreciation and thanks of the Board to Miss Adeline Wood and the competent staff of dietitians who have continued to take the best of care of our very large nursing group and who never forget to apply that personal and

home touch so much needed, especially on holidays or special occasions.

We are especially grateful to the Medical Staff for all the valuable time, skill and assistance given so freely during illness to our very large family of nurses throughout the past year. To Dr. Beck, Dr. Poll, Dr. Ira Cohen and the many others who have contributed so generously of their medical skill we extend the thanks of the Board, the Faculty and the School.

As usual, our Hospital Board, our Medical Staff, our Director, Dr. Joseph Turner, and our many friends have done everything in their power to assist us in solving many problems and maintaining our ideals, traditions and standards. We wish to extend our sincere thanks to them all.

HUGO BLUMENTHAL,

President of The Mount Sinai Hospital School of Nursing.

RESOLUTION ON THE DEATH OF SIDNEY S. PRINCE

At a special meeting of the Directors of The Mount Sinai Hospital School of Nursing, announcement having been made of the sudden death on July 20th, 1929, of Sidney S. Prince, for many years a Director of the School, the members present adopted the following resolutions of sorrow:

"We have heard with the deepest regret of the sudden death of Sidney S. Prince, who has been a Director of our School for many years.

"Throughout his service he displayed the deepest interest in all its affairs and was ever ready to aid us with his sound and keen judgment, as well as with liberal financial support.

"Through our association with him, we had learned to value him as a man and as a citizen, and his place will be a difficult one for us to fill.

"We feel a deep sense of personal loss in his removal from our midst and tender our deepfelt sympathy to the bereaved family."

It was resolved that the flag of the School be placed at half-mast until after the funeral and that an engrossed copy of these resolutions be sent to his family.

HUGO BLUMENTHAL,
President.

EDWIN M. BEROLZHEIMER,
Secretary.

SPECIAL FUNDS OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

Albert W. Scholle Memorial Fund	\$40,000.00
Founded by William and Frederic Scholle as a tribute to the memory of their father, to provide a vacation and recreation fund for Mount Sinai Hospital students and nurses.	
Estelle and Hugo Blumenthal Scholarship and Graduation Fund	35,000.00
Founded by Estelle and Hugo Blumenthal to provide an annual scholarship to the student of the graduation class chosen for special fitness to advance in the profession of nursing by taking a Post Graduate course in Columbia University. This fund also provides a prize of \$25.00 to each graduating student.	
Emil Berolzheimer Memorial Fund	20,000.00
Founded by Mrs. Emil Berolzheimer in memory of her husband, Emil Berolzheimer. The income to be used for higher education of students.	
Murry Guggenheim Scholarship Fund	20,000.00
For particulars pertaining to the purpose of this fund refer to page 70.	
Jacques D. Wimpfheimer Memorial Fund	10,000.00
Founded by Charles Wimpfheimer in memory of his son, Jacques D. Wimpfheimer. Any student requiring financial assistance during training may call upon this fund.	
Lillie Stern Scholle Pleasure Fund	9,000.00
Founded by Albert W. Scholle. The income to be used largely to defray the expenses of parties, dances and social gatherings of the students.	
Sick Nurses Fund	6,000.00
Established by Directors of the School and the Trustees of the Hospital and contributed to by them from time to time. Income and principal used to defray the expenses of graduate nurses and students of the school while sick and not confined in Mount Sinai Hospital.	
Mr. and Mrs. Sam S. Steiner Fund	5,000.00
Founded by Mr. and Mrs. Sam S. Steiner in memory of their beloved son, William J. H. Steiner. The income to be used for the relief of needy graduate nurses of the School.	
Carrie M. and Gustav Blumenthal Graduating Class Prize Fund	5,000.00
Established by provision in the will of Gustav Blumenthal; income to be distributed annually as a prize or prizes among the graduating class in such manner as the Directors may from time to time deem advisable.	
Kalman and Harriet F. Haas Fund	3,000.00
Founded by Kalman Haas. The income to be used for the general purposes of the School.	

SPECIAL FUNDS OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

(Continued)

Solomon and Betty Loeb Fund	\$3,000.00
Founded by Solomon Loeb. Income to provide an annual prize to a student.	
Carrie Untermeyer Fund	2,600.00
Founded by Mrs. Carrie Untermeyer. To establish an award of \$100.00 annually to the student graduating who has the best record for kindness and proficiency in actual bedside nursing.	
Educational Fund	2,500.00
Founded by Mrs. Berthold Levi in memory of Berthold Levi. The income to be used for higher education of students.	
Mr. and Mrs. Morris Fatman Relief Fund for Graduate Nurses	2,500.00
Founded by Mr. and Mrs. Morris Fatman; income to be used for the relief of graduate nurses.	
Eugene Meyer, Jr. Library Fund	2,000.00
Founded by Eugene Meyer, Jr. The income to be used to supply books and magazines for the school library.	
Amy C. and Fred H. Greenebaum Fund	2,000.00
Established by Mr. and Mrs. Fred H. Greenebaum; income to be used for an annual award to the most deserving student nurse in any class.	
Isabella Freedman Fund	1,500.00
Established by Mrs. Isabella Freedman. The income to be used for one or two awards to students in the graduating class who have shown marked ability, proficiency and interest in their work.	
Daniel Kops Prize Fund	1,000.00
Founded by Employees of the House of Kops in memory of Daniel Kops. The income to be applied to the awarding of a prize to the nurse in the intermediate school who each year holds the best record for bedside nursing and kindness to patients.	
Emma H. Kaskel Fund	1,000.00
Founded by Mrs. Emma H. Kaskel. Income to be used to supply magazines for the school library.	
Alfred Eckstein Fund	1,000.00
Established by Mr. Alfred Eckstein. To be used for special purposes as the Board of Directors may elect from time to time.	
Special Emergency Fund	250.00
Established by a Director to give relief to students or graduates in cases not covered by other funds.	
Pension Fund of the Mount Sinai Alumnae Association	200,000.00
Established to provide pensions to nurses after many years of service.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:

Gentlemen:

No statistical report of a Social Service Department can give an adequate picture of its manifold activities. In recent years we have found it more difficult, moreover, to show by comparative yearly figures the increase in the volume of work accomplished because we are constantly changing our statistical form in an effort to improve it. We have made several changes this year to correct unsatisfactory features of the old form and hope in the future to give a clearer statistical picture of our work. There were 468 less major care cases than in 1928, but an increase of 1,750 minor care cases. 641 less cases were closed, the result of a tendency to hold cases over a somewhat longer period of time. Although interviews on the wards and in the office show a marked increase, clinic interviews show a decided decrease, probably because many conversations were formerly counted as interviews which are not so classified now. 770 patients were referred for employment, a total of 130 less than the previous year; but of this number 177 more patients were placed than the year before.

In many clinics the social history of a case has been combined with the medical history as this procedure is considered more advantageous to both physician and worker.

The Federation for the Support of Jewish Philanthropic Societies granted us \$73,130.00 for the current year. With the appropriation and some of our special funds, we were able to add five workers to our staff: a social service worker for the Thrombo-Angiitis Obliterans Clinic; one who divided her time between the Radiotherapy Department and the Children's Asthma Clinic; one for the afternoon medical clinics; an extra summer worker to assist when any of our staff are on vacations, and an extra clerical worker to help in the Department throughout the summer. We plan to have a case advisor next year. As we have great difficulty in obtaining a sufficient number of well trained social workers, we hope also to add an educational director to our staff to give supplementary training to those workers who require it. Dr. Joseph Harkavy who was assigned as physician

to the Social Service Department by the Medical Board gives every new worker a medical examination, and has very kindly taken care of any workers who have been ill during the year.

During the past year two new members have joined the Board of the Auxiliary: Mrs. Richard P. Limburg and Mrs. Philip Roth. For many years Mrs. Roth has been interested in the Children's Health Class, not only serving as an efficient volunteer, but also giving generously to the funds which support the work. We regret that Mrs. Max Rossbach, no longer able to serve actively, has resigned from the Board.

No important changes have taken place in the work on the adult wards. We feel that the assignment of a worker to each medical and surgical service is working well. Unfortunately there has been no increase in facilities for the care of chronic patients. The need for convalescent homes for cases requiring extensive dressings or long period convalescent care is becoming more urgent, especially when the Hospital turn-over is rapid. Our physicians on the gynecological service are constantly asking us to provide suitable convalescent care for the young girls suffering from gonorrheal infections. At present there are no facilities for this group of patients.

In the Children's Social Service Department the ward work has been conducted under practically the same conditions as last year. A larger number of clinic cases, however, have been referred to the department. Many of the children, particularly in the malnutrition clinics, are not seriously ill but in need of constructive social adjustment at home and at school. As the basic difficulty in malnutrition is not always economic, but sometimes the mother's lack of knowledge of food values and proper food habits for the child, it would be helpful to institute demonstrated dietetic lessons for the mothers of malnourished children. A great number of these cases present not only a physical but a decided psychological element and these special children are supervised by a psychologist and more intensive work is being done for them. Children registered in these clinics are constantly moving away, frequently to the upper Bronx. The impossibility of continuing supervision at this distance is discouraging because in the outlying sections of the city the health and recreational facilities are inadequate.

The group of eczema cases of children under three attending the Children's Clinic is increasing. The worker gives much time to instructing mothers in the preparation of correct diets and in supervising the home environment.

We have endeavored to co-operate with the Department of Health in its intensive diphtheria campaign by giving toxin-antitoxin injections to children who had not yet received them in the municipal clinics.

Among the diabetic patients several adolescent girls have been referred for vocational guidance to the proper agencies. Much work remains to be done, however, in adjusting this group socially and in training them for industry.

We are still handicapped by the limited number of day nurseries and temporary shelters near the Hospital, especially for the colored and Porto Rican children. The opening of the Speedwell Unit for Colored Children, meeting a long felt need, has given convalescent care to a number of our little patients.

All organizations engaged in summer activities are anxious to improve their work by adapting it to definite physical or social needs. We try to confine our work to those children for whom summer outings are recommended by the physicians or where it is part of the social case work treatment.

During the summer 796 children were sent to the country. More satisfactory results, we feel, were obtained this year as more children stayed away for longer periods than ever before, 21 children remaining in the country from nine weeks to six months, 299 from three to eight weeks, and 476 for two weeks; 284 on our list, of whom 106 were colored children, could not be placed. Despite the fact that plans for the summer are started as early as March, the bulk of the work has to be done in July and August, and no matter how carefully the children are selected for the homes, last minute changes in plans are often necessary. This often causes confusion and unavoidable duplication of work.

As many more cases than could be accepted applied during the year for admission to the Children's Health Class, we have been forced to start an appointment system. At present there is a long waiting list, but cases requiring immediate treatment are given precedence. We endeavor to limit the number of mental defectives. Many of these mental defectives have already been

REPORT OF THE SOCIAL SERVICE DEPARTMENT

examined at other hospitals and repeated recommendations for institutional care have been made. Because of our long waiting list, we prefer to take those with whom more constructive work can be done.

We now have a new group of mentally retarded children similar in type to the group we had last year in the therapeutic kindergarten, many of whom were admitted to the new ungraded classes opened in the public schools in the fall. Because of their training in our class they were given preference in the public school admissions. Several had been with us since the class began in 1924. Next year our class will probably consist of children of a higher mental type who will benefit by another year's kindergarten work. We feel that this will fill a definite need, because the public schools provide no kindergarten training after the age of six.

The Max J. Breitenbach Fund has been of inestimable value as our needs have been greater than usual. Through this fund 70 boys and girls were sent to camp for a period of two to nine weeks; 12 children received tutoring; 5 were given music and dancing lessons; and many were enabled to remain at camp longer than usual. The change in behavior has been quite marked in several cases.

During the coming year we intend to stress the recreational work. We feel that the play life is very important and many of the children have not yet learned to play. In almost every case brought to the health class, there is a recreation problem involved. The quiet, timid child does not always adjust well in a club, as the groups are usually large and little individual attention is given. The social workers in the clinic feel the advisability of taking out small groups occasionally in order to establish closer contacts with the children and give them a little diversion.

In May a part time worker was placed in the Children's Asthma Clinic. Because of the rapid growth of the clinic and its many methods of therapy, the services of a full time worker were found necessary after six months. Clinic management aided by a social worker has resulted in a smoother clinic period, making it possible to treat more children in a shorter period of time. Specific instructions and persistent follow-up have diminished the number of patients who fail to keep their appointments.

With the aid of the worker it has been possible to classify the patients into treatment groups, thus permitting more intensive service. During June, July, and August, 20 children suffering from asthma were sent to the country. Of these, 8 went with a recreation worker to a farm in Connecticut where change of surroundings, good food, individual care and wholesome fun benefited all of them, and the improvement made is still evident. Mr. and Mrs. Paul Baerwald gave the necessary funds for this group and have expressed their intention of doing so again this year.

Two of our little asthma patients were confined to their homes for a long time, which interfered seriously with their schooling. As it was impossible to obtain a visiting teacher through the Department of Education, the Social Service Committee paid for private tuition.

The Adult Cardiac Clinic has had 268 new admissions during 1929, an increase of approximately 20 per cent. over the previous year.

The Children's Cardiac Clinic in its twelve years of service, has treated approximately 2,000 children and has now undertaken a detailed study of the medical histories of these patients. This research work has been made possible through the generous gift of Mrs. Henry S. Glazier. The Heart Committee of the New York Tuberculosis and Health Association has also generously co-operated by supplying a worker to assist in compiling the data and to prepare the statistical material for publication when the study is completed.

The Wednesday afternoon clinic for adolescents was discontinued after a trial of six months because of poor attendance. Shortly after that Dr. Roth, whom the children already knew, took charge of the Adult Cardiac Clinic and this adolescent group, knowing that they were not to be transferred to another physician, seemed more inclined to attend the adult clinic.

In the Orthopedic Department no important changes have taken place. The opening of a new home for orthopedic children under the auspices of the Association for the Aid of Crippled Children, has made it possible for us to place more children of pre-school age for convalescent care. In the summer it was

difficult to place children suffering from scoliosis, because they have the appearance of normal children and are not considered crippled enough for most homes. They are often, nevertheless, more in need of convalescent care than badly deformed children.

We have difficulty in persuading some patients, adults as well as children, to wear their braces regularly. In a study of 34 patients to whom Knight spinal braces had been given, we found that the majority were wearing them and were being greatly benefited.

As a result of a study of 100 thrombo-angiitis obliterans cases made last year, it was recommended that a full time social worker be appointed to the clinic. This matter had already been brought to our attention by the physician in charge of this department and on May 15, a worker was engaged. Many delinquent patients urgently in need of treatment had to be brought back to the clinic. The worker has been able to relieve the chief of the clinic of much non-medical work. The preliminary task of organization has been completed and the worker can now give her entire attention to the intricate social problems involved.

Three of the most difficult problems in connection with the thrombo-angiitis obliterans patients are: (1) keeping up their morale; (2) inducing them to carry out the doctor's instructions, particularly the discontinuance of smoking. Most of the men have been heavy smokers and have difficulty in breaking themselves of this habit; (3) finding employment for those unable to compete with persons in normal health. The worker has made a study of employment possibilities for patients thus handicapped. As there are so few openings for them in industry, the sheltered workshops must be used instead. It is important to the general well-being of the patients to be occupied and we make every effort to persuade them to enter these sheltered workshops; but have very little success owing to the fact that the wages paid are almost negligible.

Some changes have been made in the administration of the Tuberculosis Clinic. Tuesdays have been set aside for active cases; Thursdays for "contacts"; and Saturdays, as heretofore, for examination of children. This arrangement makes for a more even distribution of work and prevents the "contacts" from mingling with the sick patients. All suspicious chest cases and

children in poor health who show a positive tuberculin reaction are now put in the care of the Tuberculosis Clinic instead of the general pediatric clinics. For this purpose two pediatricians were assigned to the Tuberculosis Clinic.

Convalescent care for cured or inactive tuberculosis cases continues to be difficult to obtain. Colored children are not adequately provided for in country homes during the summer, but fortunately there is no color line for preventorium care.

The chief of clinic and his staff continue to have monthly conferences which are attended by patients and visitors, for the purpose of reviewing the cases from both the medical and social point of view. The social side is presented by the worker and disposition of the case is made after medical and social aspects have been carefully weighed. All patients about to be discharged from the clinic are given full instructions for the care of their health. Several conferences have been held with representatives of the Department of Health in order to affect a closer co-operation.

In the Luetic Department, 1,174 visits were made during the year; 458 first visits for home investigations, and 713 revisits to urge the patient to return to the clinic; 375 cases were admitted, 41 reopened, and 438 had to be closed, usually because of our inability to find the patient. As in previous years we have found it necessary to transfer some patients to night clinics as it was impossible for them to leave their work during the day.

A study of "contacts" of patients admitted to the clinic was begun in September, 1928. During the twelve months following, 387 new patients were admitted to the clinic with a diagnosis of lues and 15 cases were reopened; 238 being adult males, 149 adult females, and 15 minors. The number of "contacts" needing examination totaled 548. Of this number 209 received the Wassermann test, here or elsewhere, during the first month after the patient's admission and 65 of these were positive. Of the remaining 339 "contacts" not examined by the end of the first month of the patient's admission, 54 reported during the subsequent months of the year and 8 of these were positive. It is interesting to note that most of these "contacts" came in the month following the patient's admission, although some waited two or three months. There remained 285 still not examined, of which number 115 were not available because of residence

outside the city. We instructed the patients in such instances to advise their relatives at home to go to the nearest doctor or clinic for examination. The other 170 "contacts" we are still endeavoring to bring to the clinic.

For several years the physicians in charge of the Radiotherapy Department have greatly needed a social worker, and on May 1 a part time worker was appointed. Since her installation 437 patients have been interviewed and 190 home visits made. Approximately 2,000 patients a year were treated in the department, many of them referred from other services of the Hospital, and already known to the social service workers in those departments. This inter-departmental co-operation is one of the most beneficial features of the radiotherapy work.

The diseases treated are classified as 65 per cent. benign condition and 35 per cent. malignant. Half of the cases in the first category were sent from the Skin Department; the remainder were referred chiefly from the Gynecological and Medical Services and to a lesser extent from the Surgical Service and Children's Department. Follow-up work is particularly important in the Radiotherapy Department, as much of the treatment administered has to be continuous in order to be effective. This makes it imperative to have a very well organized follow-up with an efficacious system of card indices, and such a system has been installed. The figures of the follow-up and return to clinics show a decided improvement. A part time worker is inadequate for this service and we hope to have a full time worker very soon.

As mentioned in last year's report, a male psychiatric worker joined the staff of the Mental Health Class in October, 1928. The need which led to his appointment has been clearly stated by Dr. Oberndorf. "In mental diseases where 'contact' is so difficult to establish under any circumstances, it has been found that women workers are particularly ineffectual in handling adolescent boys who are just emerging from the mother domination and unconsciously view with antagonism any one reminiscent of the mother from whom they are trying to divorce themselves. The female social service worker is obviously a mother substitute. It is, therefore, desirable for these cases that a male social worker be assigned if any confidence is to be instilled in the patient. The right type of worker here forms an ideal with which the patient can identify himself and attempt to emulate."

The case load of this worker has increased from 14 to 54 active cases, 28 of them diagnosed as schizophrenias. As this type represents the least promising of the neurotic and psychotic group, the aim is to adjust the individual at a social level where he can function most adequately without commitment to a hospital for the insane. Because the prognosis in this group is guarded at best, success cannot be measured in terms of ultimate recovery or marked improvement. In the more hopeful cases as represented in the psycho-neuroses, improvement has been more evident.

It is interesting to note in the recent survey of mental hygiene facilities in New York City, published by the New York Committee on Mental Hygiene, that of all the clinics reviewed, we have the greatest number of patients returning to clinic. This report makes some suggestions for improving our service: (1) establishment of an appointment service; (2) appointment of a psychologist; (3) need for clerical help; (4) additional social service workers; (5) physical changes. The first two suggestions have been adopted. At least one more psychiatric worker is greatly needed to handle the increasing number of cases. Because so many of our patients move to the Bronx, much time is consumed in making home visits.

One of the major problems confronting the clinic, but beyond its immediate control, is the disposition of border line cases, patients not sick enough for commitment to a state hospital. There is great need for an endowed home from which patients could continue their usual activities.

Vocational adjustment for men and boys is still undeveloped and we often feel the need of the services of a bureau similar to the Vocational Adjustment Bureau for Girls. Undoubtedly a certain percentage of mentally afflicted men and boys who drift from job to job could be greatly helped by proper placement and supervision while at work.

In the Occupational Therapy Class the attendance during the year was 466. Some of the patients stayed about a year while others were referred only for observation and remained a very short time.

In the early fall the occupational therapist took over the direction of the Recreation Club conducted so successfully for three years at Henry Meinhard Memorial Settlement for patients

of the Mental Health Class. Patients of all ages from fifteen to sixty attend the club meetings whose activities include checkers, dominoes, ping-pong, card playing and dancing. In the summer a number of well attended and enjoyable picnics were held.

In July a social worker was appointed for the afternoon medical clinics. Prior to that time the social work in these clinics had been carried on by the workers attached to the medical wards. With the reorganization of the afternoon medical clinics and its accompanying increase of new patients, the services of a full time worker became indispensable. The medical clinics in the Out-Patient Department are gaining in importance. Over 500 new patients are treated there each month as compared to about 75 new patients on the wards. Patients usually come to the clinic at the beginning of an illness when preventive work can more readily be effected. They can often receive all the necessary care in the clinic and home with the co-operation of the social worker at much less expense than when occupying a hospital bed.

Since October, 1928, the social worker in the Metabolism Clinic is also devoting some of her time to other morning medical clinics.

Cooking classes, organized in 1926 but discontinued for some time, were re-established in October, 1929, by the Social Service and Diabetic Departments jointly: the benefit of such instruction was demonstrated by the slow improvement of the new patients. The dietitian conducts the course, comprised of ten lectures on the preparation and substitution of foods, and one lecture on personal hygiene. The success of the first class led to the formation of an obesity cooking class, and also three diabetic cooking classes. As the attendance is good and the results gratifying, we intend to make these classes a regular part of the clinic treatment for all new patients. Through the Social Service Department insulin syringes and needles are being sold at cost to the patient; this is advisable as patients are now using the recommended and uniform syringe. No convalescent home will accept diabetics, although many requests come to us from the clinic physicians for this care. At present the improvement of several clinic patients depends on complete rest away from family responsibilities and it is regrettable that there is no place to send them.

In the Gastro-Intestinal Clinic an increasing number of patients was referred for dietary instruction to the Social Service Department during the last six months, usually because they had failed to grasp the physician's recommendations on account of language handicap, or life-long food traditions.

In the Adult Asthma Clinic, besides the customary refers common to all clinics, those asthma cases which are not responding to treatment in the clinic are put under our supervision for home investigation with special attention to those environmental conditions to which the patient is sensitive.

In the general medical clinics a special study of malnutrition cases is being conducted, follow-up in the home being carried on by the social worker.

The work in the morning medical clinics has developed so much that another social worker is needed in order to cover these clinics adequately.

Medical follow-up service was established in three additional clinics this year; there are now eleven clinics covered by follow-up service: gynecological; orthopedic; pediatric; neurological; four surgical clinics; the special chest clinic, and two medical clinics.

Notifications were sent out to 13,006 patients, resulting in 8,688 visits to the clinic, an average attendance of 66 per cent. 629 of the patients were discharged; 1,363 were referred for treatment to other clinics, and 325 were referred for readmission to the Hospital. Because of the increase in follow-up work, a full time secretary was added to the staff. Another clerical assistant is needed but lack of space prevents this appointment at present.

One of our problems mentioned in previous reports, is our inability to cope with the Porto Rican patients. They do not respond to constructive health work and the relief agencies have not the funds to give the necessary relief.

Fifty-eight volunteers served during the year, filling all the available positions. We have been delighted with the reliability and efficiency of this group. Doctors or supervisors are frequently heard to comment that a certain volunteer is exceedingly valuable and as steady in her attendance as a professional worker. The number of volunteers is smaller this year because they retained

REPORT OF THE SOCIAL SERVICE DEPARTMENT

their positions longer, several undertook more than one type of work, and because in medical follow-up, volunteers were replaced by paid workers.

Ten lectures were given to the student nurses of the School of Nursing and we wish to thank those who so kindly assisted us in presenting this course. The lectures were as follows:

"A Survey of the Field of Social Service," by Miss Jane Hoey.

"Convalescence," by Mrs. Rachel Israel.

"Social Statistics," by Mr. Ralph Hurlin.

"The Social Aspect of Tuberculosis and the Nurse's Part in Combating the Disease," by Miss Jane Nicholson.

"Social Aspects of Venereal Diseases," by Miss Ella Pensinger.

"Social Case Work," by Mrs. Elsa Butler Grove.

"Employment of the Handicapped Wage Earner," by Mr. Moses Leavitt.

"Visiting Nursing and Its Place in the Community," by Miss Charlotte Pittman.

"Delinquency," by Judge Samuel Levy.

"Hospital Social Service," by Miss Fanny Lissauer.

Dr. Irving Roth addressed the members of the Board of the Social Service Auxiliary on the "Aspects of Cardiac Work" and Dr. Murray Peshkin on "The Children's Asthma Clinic," which we greatly appreciated.

In our endeavor to give every possible assistance to our patients we call upon all the welfare agencies, both public and private, to assist us. They have responded to our requests for their co-operation in a wholehearted and generous way for which we express our grateful appreciation.

We continue to have many needs in the Department which cannot be filled because of lack of funds and it is with a feeling of deep gratitude that we acknowledge the bequest of \$5,000.00 for social service which Mr. Abraham Erlanger made in his will.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

The members of the Board of the Social Service Auxiliary have, as in past years, made generous donations toward the support of the work, and have also given unstintingly of their time. I regret that I cannot make more adequate acknowledgment of their valued assistance, to each one individually.

I also wish to add my thanks to Dr. Turner for his interest and advice, and to Miss Lissauer and her staff for their efforts in so ably carrying on the work of the Department.

Respectfully submitted,

RUTH M. COOK,

President of the Social Service Auxiliary.

REPORT OF THE CHAIRMAN OF THE CLOTHING COMMITTEE

In handing in our report for the year 1929 we can only repeat that we have received the same generous aid from the five Sewing Groups which have helped us for the past years. We greatly regret the fact that the group headed by Mrs. E. L. Smith has ceased to work for us. However, they have given us a very nice sum of money which will provide the necessary clothing for our boys at Surprise Lake Camp for some time and also help us greatly with the General Closets. The detailed report follows:

Expenses for 130 articles.....	\$114.15
Refunds	37.00
Number of families supplied.....	495
Number of individuals supplied	604

THE MOUNT SINAI HOSPITAL LADIES' AUXILIARY SOCIETY

OFFICERS

MRS. EMIL FRENKELPRESIDENT
MRS. OSCAR ROSETREASURER
MRS. J. A. ARNOLDSECRETARY

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:
Gentlemen:

It seems but a few weeks ago that I rendered to you the report of our work for the year 1928-29, and yet the time has come for me to inform you again of our activities during the past winter.

The task of fulfilling the quota within the prescribed time has, as usual, been consummated without difficulty, and this success is due to no effort on my part, but can be entirely attributed to the untiring energy of my faithful co-workers, who met here every Monday to assist in meeting your requirements.

Our burden was further lightened by the excellent services rendered by our good matron, Mrs. Taylor, who has been ready on all occasions to fill our every want and need.

To you, the Board of Trustees, we extend sincerest thanks for your wise counsel as well as the financial assistance which you so generously gave, and if I were permitted to single out one person who has given more of his time to assist us than others, the name of Charles Klingenstein would inevitably come to my mind, and to him I can only reiterate the appreciation which I have so often personally expressed.

Our work for the year has been completed, and in closing I express the fond hope that we may continue the activities in the coming winter with renewed vigor and with benefit to the Institution.

All of which is respectfully submitted.

MALY R. FRENKEL,
President.

REPORT OF THE LADIES' AUXILIARY SOCIETY

Extracts from the Constitution on Endowed Beds and Endowments

- A Contribution of \$2,500.00 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Life Bed. Such a contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the general wards of the main Hospital, free of charge.
- A Contribution of \$3,500 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Memorial Bed. Such a contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the main Hospital, free of charge. Such donor may bequeath that right to a successor appointed by the said donor in his or her last will and testament, or by any other instrument under seal. In the event of such successor being appointed, the rights hereinbefore mentioned shall continue for a period of not over fifty years from the date of such contribution—such period, however, not to end before ten years from the death of the donor.
- A Contribution of \$5,000 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Perpetual Bed in the Children's Pavilion. Such contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the wards of the Children's Pavilion, free of charge. Such donor may bequeath that right to a successor appointed by said donor in his or her last will and testament or by any other instrument under seal.
- A Contribution of \$7,500 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Perpetual Bed, but where, under the provision of any will executed prior to March 20, 1921, the sum of \$5,000 or more is bequeathed to the Hospital in payment of any Perpetual Bed, the Board of Trustees may, at their option, accept such sum in payment of such Perpetual Bed. Such contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the general wards of the main Hospital, free of charge. Such donor may bequeath that right to a successor appointed by said donor in his or her last will and testament, or by any other instrument under seal.
- When a corporation is the donor, the privilege shall expire at the end of twenty-five years from the date of such contribution.
- Tablets to commemorate the endowment of Life and Memorial Beds shall be placed in the ward selected by the donor, subject to the rules of the Hospital. Tablets for Life Beds shall be maintained during the life of the donor, tablets for Memorial Beds for a period not beyond fifty years from the date of their endowment, such a period, however, not to end before ten years from the death of the donor. The endowment of a Perpetual Bed shall entitle the donor, or his legal representative, to have a tablet placed in the ward selected by him, or by them, or to have the endowment recorded on a tablet provided for that purpose in the corridor of the Hospital; such tablets shall be maintained in perpetuity.
- A donor may change a Life Bed endowed by him or her to a Memorial Bed by making an additional contribution of \$1,000, or to a Perpetual Bed by making an additional contribution of \$5,000, or may change a Memorial Bed to a Perpetual Bed by making an additional contribution of \$4,000.
- No patient shall occupy a Life, Memorial or Perpetual Bed unless he shall comply with the current rules of the Hospital and be a proper subject for treatment according to its regulations.
- An endowment for the establishing of any special fund may be accepted by a resolution of the Board of Trustees. Such fund may be created either for a special purpose, in which event the income therefrom shall be devoted to such purpose only, or under the name of one or more persons, in which event the income therefrom shall be devoted to the general purposes of the Hospital. Such endowment funds shall be kept by the Treasurer as special accounts. Contributions to existing funds may be made at any time, but no funds shall be created with an initial endowment of less than Ten Thousand Dollars.

HISTORICAL NOTE

The Mount Sinai Hospital was organized and incorporated in 1852 for "benevolent, charitable and scientific purposes." The work of the Hospital was begun in a small private dwelling on 28th Street, between Seventh and Eighth Avenues, which accommodated 28 patients. The Hospital now has accommodations for 658 patients, not including 18 beds in the receiving ward.

In 1871 the Hospital completed and occupied, at Lexington Avenue, 66th and 67th Streets, a building having a capacity of 200 beds.

The Dispensary, now known as the Out-Patient Department, was inaugurated in 1872.

The clinical departments first organized were those of medicine and surgery; a gynecologist was appointed in 1877.

Mount Sinai created precedents among the hospitals of New York by setting up a distinct pediatric service in 1878 and an otologic service in 1879; the latter was at first combined with, but in 1910 was separated from, ophthalmology and laryngology.

The Mount Sinai Training School for Nurses, in affiliation with the Hospital, was incorporated in March, 1881; the name of the school was changed in 1923 to The Mount Sinai Hospital School of Nursing.

In 1883 a committee was formed to develop a Medical Library.

In 1886 a district medical service was inaugurated.

Provision for the care of private patients was first made in 1886; an intermediate or "semi-private" ward was opened in 1904.

In 1893 a Pathological Department was established, and consultants in dermatology and neurology were appointed.

The corner stone of the group of ten hospital buildings occupying the block bounded by Fifth and Madison Avenues, 100th and 101st Streets, was laid May 22nd, 1901; the buildings were completed and occupied March 15th, 1904, when 500 beds became available for the care of the sick.

A Department of Dietetics was established in 1905.

A Social Service Department was inaugurated in 1906.

A Tuberculosis Clinic was organized in 1908.

The first of a series of "Fellowship" funds, to assist investigators engaged in scientific medical work, was created in 1908.

The Hospital's first X-ray machine was installed in 1900. In 1910 a full-fledged Department of Radiology was formed and in 1924 the department was subdivided into separate branches for (a) radiography and (b) X-ray and radium therapy.

In 1910 the three-story Out-Patient Building, which had been completed in 1904 was altered to a five-story building, and the Nurses' Home was enlarged from a six-story to an eight-story building. At the same time, new isolation wards were erected on the roof of the Medical Building.

A Dental Department was established for the benefit of in-patients in 1910; this work was extended to the Out-Patient Department in 1925.

An orthopedic surgeon and a physio-therapist were named in 1911.

Roof wards for outdoor treatment were erected on the Medical and Surgical Pavilions in 1912.

The Hospital in 1912 accepted a fund "for the advancement of preventive medicine." A "health class" for children was promptly established.

In 1913 the erection of seven additional buildings south of 100th Street was begun; four of these buildings were occupied in 1915, and three, namely, the Private Pavilion, the Children's Pavilion and the Auditorium, were completed in the spring of 1922. With these additions, the Hospital was able to care for 654 patients.

The first of a series of lectureship funds was established in 1913. These funds provide honoraria for distinguished visiting lecturers.

Electro-cardiography was instituted in 1915.

In 1917, Mount Sinai Hospital became a constituent member of the Federation for the Support of Jewish Philanthropic Societies, which was organized in that year.

HISTORICAL NOTE

Until 1917, tonsillectomies were performed in the Dispensary, often without anesthesia; in the year mentioned, a "tonsil and adenoid" ward, with a fully equipped operating room, was opened.

A Mount Sinai Hospital Unit, organized as a section of the Medical Department of the United States Army, was sent to France in 1918.

Post-Graduate medical instruction was formally organized in 1923, in affiliation with the College of Physicians and Surgeons of Columbia University.

A permanent fund for the support of medical research was inaugurated in 1925, prior to which research was precariously supported by occasional donations.

The construction of a new school and residence building for the School of Nursing, fronting on 98th Street, between Fifth and Madison Avenues, was begun in 1925 and completed in 1927; the residence accommodates 490 nurses.

In 1931 the construction of a new building on Fifth Avenue, between 100th and 101st Streets for the care of patients of moderate means will be completed. When opened it will provide accommodations for 120 patients. Its upper floors will contain twelve operating rooms and accessory facilities.

In 1931, the Medical Staff, with the help of the Hospital, organized a consultation service for ambulant out-patients of moderate means.

STATISTICAL SUMMARY

Year	Patients Treated in Hospital	Hospital Major Surgical Operations	Consultations in Out-Patient Department	Disbursements for Maintenance of Hospital and Out-Patient Department
1857.....	216	46	None	\$ 9,000.00
1860.....	297	46	None	14,000.00
1870.....	663	225	None	20,000.00
1880.....	1,437	240	9,922	44,376.10
1890.....	2,862	1,049	43,560	100,000.00
1900.....	3,145	1,472	86,431	135,272.00
1910.....	7,613	3,840	115,726	410,000.00
1920.....	9,548	5,015	173,682	899,704.97
1930.....	12,179	7,707	222,489	1,785,244.23

MINUTES OF THE ANNUAL MEETING OF
THE MOUNT SINAI HOSPITAL OF THE CITY OF
NEW YORK
HELD MARCH 15th, 1931

The President, Mr. George Blumenthal, called the meeting to order.

On motion duly made, seconded and carried, it was resolved to dispense with the reading of the minutes of the Annual Meeting, held March 23rd, 1930, and the reading of the Treasurer's report.

The President read his report.

Dr. C. E. A. Winslow, Professor of Public Health, Yale School of Medicine, addressed the meeting on the subject of: "The Hospital and the Community."

On motion duly made, seconded and unanimously carried, the meeting was adjourned.

ARTHUR H. HARLOW,
Secretary.

PRESIDENT'S REPORT

The economic and financial depression of the last eighteen months has had its repercussion on the affairs of the Hospital as on every other charitable and business institution.

There has been a small decrease in the number of patients treated in the Hospital in 1930 compared with 1929. The percentage of those not able to pay anything or only a small part of the cost of their treatment has increased very considerably, augmenting the financial burden of the Hospital in a marked degree.

The number of patients treated in the Hospital in 1930 was 12,179 compared with 12,400 in 1929, that of patients in the Private Pavilion 2,476 against 2,562 and that of consultations in the Out-Patient Department 222,489 against 207,949.

The new building on Fifth Avenue, between 100th and 101st Streets, destined to house pay patients of moderate means is almost completed and will be put in operation about October 1st next. It is the first building devoted exclusively to that particular class of patients in this city.

Without taking into account interest on the investment, representing a value of not far from two million dollars, the charge to patients in this building will not cover the maintenance cost. Besides providing accommodations for about 100 group patients, space in the new building will be devoted to a consultation service for patients of moderate means which we hope to see inaugurated in the early fall.

The establishment of this consultation clinic is made possible by the cordial reception of the idea by the Medical staff of the Hospital. Its management will, of course, be mainly in the hands of the Medical staff but it will have the whole-hearted cooperation of the Hospital Trustees and the Hospital will assume any financial loss this new service may entail during the experimental stage and up to the time when it shall become self-sustaining.

The Board is convinced that the consultation clinic will be a great boon to those who, while able to pay for the services of a general practitioner, are not in a financial position to meet the cost of obtaining privately the necessary aid of consulting specialists and that it will give an opportunity to many doctors to enhance their usefulness to the community.

FIFTH AVENUE FRONT SHOWING AT LEFT SEMI-PRIVATE PAVILION JUST COMPLETED

A WARD IN THE CHILDREN'S PAVILION

PRESIDENT'S REPORT

The enlargement and re-equipment of the laundry were completed last March and we believe that we now have a model plant. It had been estimated that after making allowances for all running expenses, interest on capital investment and depreciation of laundry equipment, the Hospital, in its old plant, was able to produce its work at sixty per cent. of the cost of a wholesale commercial laundry service. Calculating merely salaries and supplies, the cost was but thirty per cent. The new equipment in the laundry which makes for much greater efficiency, has reduced even these low figures. We are now handling on an average of 55,000 pounds each week represented by 125,000 pieces. This is an increase of fifty per cent. over our previous capacity and the work is accomplished with about the same number of employees.

Contracts for the transformation of the former Nurses' Home into quarters for additional Dispensary facilities and for the housing of the Intern staff have been given out, and, as soon as this work is completed, alterations in the Lehman Dispensary Building will be started and the building program laid down several years ago will be realized.

Mount Sinai Hospital now covers practically every field in medicine except obstetrics. A maternity service should, in time, be added to the Hospital's activities but we do not see, at the moment, how it can be done unless the erection of a building for this purpose and some endowment should be offered by some generous friend or friends of the institution.

Post-graduate medical teaching conducted in affiliation with Columbia University has attracted a larger number of students than in any previous year, 90 students having registered in 1930 compared with 72 in 1929.

This formal post-graduate teaching is only a small part of the teaching program. Without going into details, I think it of interest to quote the following from a report of the Council on Medical Education and Hospitals of the American Medical Association under date of November 18, 1930:

"The educational program of this institution (Mount Sinai Hospital) is very highly organized. Departmental meetings are held monthly or twice a month. For the month of November, 1930, twenty-seven scientific meetings were scheduled to be

PRESIDENT'S REPORT

held in the Hospital. This gives the interns ample opportunity to attend a great many meetings.

"The facilities of the Laboratory are extraordinary in their educational value and from the standpoint of the original investigative work which is being carried on."

Among the most useful activities of the Hospital are the Pathological conferences held in the Blumenthal Auditorium. This is filled to capacity every Wednesday afternoon, when the Hospital staff and other physicians meet to review the clinical work of the previous week. The fame of these conferences has spread far and wide, not infrequently the audience includes distinguished medical visitors from important clinical and scientific centers of other parts of the United States. As we are young in the educational field, the results already achieved are all the more gratifying. With larger means much more could be accomplished and considerable endowments for educational purposes would be most helpful.

Most imperative is the great need for increased research endowment, our present funds being hopelessly inadequate for our requirements. There should continually be borne in mind, too, the plan of eventually providing additional and still better adapted quarters for the Adolph Lewisohn Laboratories. There is no doubt that our physical limitations are largely responsible for the suppression of valuable research work which could be carried on by or in association with the large and splendidly equipped staff of the Hospital.

In spite of the unsatisfactory physical conditions, demands on our laboratories continue to grow with the advance being made continuously in new diagnostic procedures. Thus, notwithstanding the fact that the number of bed days in the Hospital decreased during the last year, the number of laboratory examinations increased by over 6,500. Furthermore, more men are being trained, a greater number of studies are being carried on, and what can be considered one of the most outstanding achievements of the year is the fact that an extremely close liaison has developed between the laboratories and the clinical service so that major group problems involving a number of workers are being actively followed up. Some of these investigations were made possible by the generous grants received from the Lucius N. Littauer and the Nathan Hofheimer Foundations.

PRESIDENT'S REPORT

Other important advances made during the year are the continued development of problems opened up by the discovery of the Schwartzman phenomenon, an immunological field whose foundations were laid in our own institution; the pursuance of chemical studies in connection with Dr. Swick's important work on intravenous urography i.e. a method of studying the configuration of the urinary tract without the necessity of cystoscopy; the award of a prize for originality and excellence of presentation of work in cardio-vascular diseases at the Detroit meeting of the American Medical Association; the appointment of Dr. Gross, the Director of Laboratories, as Director of the Scientific Exhibit of the New York Academy of Medicine for its Annual Graduate Fortnight and the selection of Dr. Robert Frank as a Harvey Lecturer and his presentation of his findings in the field of endocrinology. The thirty-seven publications issued during the year cover a wide field of scientific interest. A more detailed account of this work will be given in the report of the President of the Medical Board.

The activities of the Out-Patient Department will be presented in full in the Annual Report. It is of interest, however, to mention at this time the striking increase in demand for this type of service in 1930. We have a busy group of clinics, numbering about sixty, which for a number of years have used the existing facilities to the limit; indeed, it has been necessary to restrict admission to the capacity of the individual clinics to give a modicum of adequate medical service.

The Out-Patient Department can comfortably handle 200,000 consultations a year, and the number has fluctuated very little for some years. However, in the year just past, the number reached the high total of 222,489 consultations. That we were able to render this service was due entirely to the increased volume of voluntary service rendered gratuitously by the Dispensary physicians, who gave longer hours of service at a time when the need, due to unemployment and other economic factors, was greatest. We should be lacking in appreciation were we not to give public acknowledgment and thanks at this time for this contribution.

A number of distinguished physicians and scientists lectured at the Hospital during the past year. They included:

Professor L. Lichtwitz, Director of Medical Division of City Hospital of Altoona.

PRESIDENT'S REPORT

Professor Franz Volhard, Director of University Medical Clinic of Frankfurt a/M.

Dr. Theobald Smith, Director Emeritus of the Department of Animal Pathology, Rockefeller Institute for Medical Research, Princeton.

The expenditures for current purposes of the Hospital including the School of Nursing, the Social Service Department and the Ladies' Auxiliary in 1930 amounted to..... \$1,785,244.23
Receipts applicable to current expenditures were.... 1,729,038.92

Leaving a deficit of..... \$56,205.31

Included in above receipts are the following:

From Federation for the Mount Sinai Hospital Group \$496,770.32
From the United Hospital Fund..... 56,321.56
From the City of New York..... 89,465.47

For a year of so greatly disturbed financial and economic conditions the result, although bad, can be contemplated without great concern. The outlook for 1931, however, is, frankly speaking, quite alarming. Receipts in all departments, particularly in the Private Pavilion and from ward patients, are falling off steadily and furthermore it is quite evident that, unless affairs in this country should, before long, take a favorable turn, we shall find ourselves confronted with reduced contributions from such sources as Federation and the United Hospital Fund.

Federation closed the year 1930 with a deficit of nearly \$300,000 to cover which it was compelled to draw on its meagre reserves. The remaining reserves are very slender and unless the community awakens to a deeper appreciation of the situation and gives expression to it by largely increased contributions, Federation, no matter how unwillingly, will be forced greatly to reduce the allotments to the ninety-one affiliated institutions. The Business Men's Council of Federation, headed by Mr. S. D. Leidesdorf, has more than fulfilled the hopes and expectations of those conversant with the situation and the community owes gratitude and appreciation for the work done. I am glad to express here our admiration of a fine piece of unselfish work accomplished under the most trying conditions.

PRESIDENT'S REPORT

We received in 1930 from the City of New York and from the United Hospital Fund amounts in excess of those in 1929 but in regard to the United Hospital Fund the same conditions prevail as in the case of Federation and in expressing our thanks to the managers of the United Hospital Fund we earnestly appeal to our friends to support the fund as much as their means permit.

The following appointments have been made on our Medical staff:

- Dr. Harold Neuhoof, as Surgeon to the Hospital
- Dr. Ira Cohen, as Associate Surgeon
- Dr. Arthur S. W. Touroff, as Adjunct Surgeon
- Drs. David Beck, Harold T. Hyman, and Daniel Poll, as Associate Physicians
- Dr. Harry Wessler, as Associate Physician for Chest diseases
- Drs. Solomon S. Lichtman and Kaufman Wallach, as Adjunct Physicians
- Drs. Louis Chargin and Oscar L. Levin, as Associate Dermatologists
- Drs. Samuel Peck and Max Scheer, as Adjunct Dermatologists
- Dr. Sol. W. Ginsburg, as Adjunct Neurologist
- Drs. Alexander S. Lorand and Leonard S. Rothschild, as Adjunct Psychiatrists
- Dr. I. Goldstein, as Associate Ophthalmic Surgeon
- Dr. Robert K. Lambert, as Adjunct Ophthalmic Surgeon.
- Dr. Albert Kean, as Associate Radiotherapist
- Drs. Hubert Mann and Irving R. Roth, as Associate Cardiographers
- Dr. Marcy L. Sussman, as Assistant Radiologist

Death has levied heavy toll on our ranks in 1930. We regretfully report the demise of:

Mr. Emanuel Van Raalte, a member of the Board of Trustees for twenty-one years whose services in many directions, particularly as liaison officer between Federation and the Hospital, were of great value and left their impress on his colleagues.

Mr. Daniel Guggenheim had been active in the management for only three years but his interest in Mount Sinai Hospital did

PRESIDENT'S REPORT

not cease with the ending of his official connection. To the generosity of Mr. Guggenheim and his brothers we owe the Private Pavilion, one of the outstanding components of the institution.

Dr. Walter M. Brickner, for more than twenty years intern and adjunct surgeon, rendered efficient and valuable services in these positions and distinguished himself in the important place he occupied in the Mount Sinai Unit of the Red Cross during the world war.

Mrs. Emil Frenkel, for twenty-five years member and for seven years President of the Ladies' Auxiliary. Outstanding ability proved her an exceptional executive and her genial qualities gained for her the love and affection of her co-workers.

Resolutions passed by the Board of Trustees in regard to Mr. Van Raalte and Mr. Guggenheim will be printed in full in the Annual Report.

Pressure of business made it necessary for Mr. Henry L. Calman and Mr. Henry Morgenthau, Jr. and ill health compelled Mr. Eli Winkler to resign as trustees of the Hospital and we deeply regret that we will not longer have their cooperation in our work.

Mr. Calman had been a trustee for twenty-four years and his devotion to the interests of the Hospital has been a profound one from the day he joined us until the moment when he felt he had to sever his connection. He rendered particularly valuable services on the Committees on Rules, on Building and on Equipment.

Mr. Walter Blumenthal and Mr. Harold Wimpfheimer were elected to fill vacancies on the Board. Both gentlemen are sons of active and devoted trustees and Mr. Blumenthal is the grandson of Mr. Isaac Blumenthal who was a trustee for twenty-six years.

The following Trustees were re-elected for the term expiring March 1, 1937:

Edwin M. Berolzheimer	Charles Klingenstein
Albert Forsch	Waldemar Kops
Leonard A. Hockstader	Adolph Lewisohn
Benjamin Mordecai	

The Mount Sinai Hospital School of Nursing celebrated its Fiftieth Anniversary some few days ago. Founded by a committee

PRESIDENT'S REPORT

of ladies in 1881, consisting of Mrs. Florian H. Florance, Mrs. Charles Hendricks, Mrs. David Seligman and others, the school has made for itself an enviable record of achievement. Under the able management of its President, Mr. Hugo Blumenthal, and its Superintendent, Miss Elizabeth A. Greener, the school maintains its high standard of efficient service.

Under the leadership of Dr. Isidore Friesner, President of the Medical Board, the same self-sacrificing service of our Medical staff in the Hospital as well as in the Out-Patient Department to which we are accustomed since so many years, has again been rendered in its usual efficient way and voicing our gratitude is giving only slight expression to our appreciation of their co-operation.

I am pleased to mention the honors paid to:

Dr. Carl Koller, by his receiving from the Academy of Medicine the first award of the Academy Medal for unusually meritorious work in medicine.

Dr. Jaches, by his election to the presidency of the American Roentgen Ray Society.

An impressive ceremony took place on December 22nd, when Mr. Kops, on behalf of the Board of Trustees, presented to Robert Steenson, chauffeur, O. C. Spangenberg, electrician, Paul Maiser, orderly, Hanz Zedwitz, orderly, William Diehl, carpenter and Theodore Baer, orderly, service medals and purses of gold coin in recognition of more than twenty-five years continued faithful service to the Hospital.

An innovation is the experimental publication of the Hospital Bulletin made possible by the generosity of Mr. Arthur Lorsch, who not only bears the cost of the issue but also supervises the editing thereof.

We record the following benefactions:

PERPETUAL BEDS IN THE MAIN HOSPITAL

In memory of Mary Small Einstein—Dedicated by her husband, I. D. Einstein.....	\$7,500.00
In memory of Mayer Mayer and Fanny Mayer—Beloved father and mother of Bernhard Mayer	7,500.00

PRESIDENT'S REPORT

PERPETUAL BEDS IN CHILDREN'S PAVILION

The Adelaide F. Pfeiffer Bed—Founded by provision in her will.....	\$5,225.00
Ludwig Ulmann—In memory of his brother, Bernhard Ulmann	5,000.00
In memory of Agnes C. Rice—Founded by provision in her will.....	4,750.00

LIFE BED

In memory of Julius Kaufmann—Endowed by his wife, Emma H. Kaufmann.....	2,500.00
---	----------

FUNDS TO BE USED FOR RESEARCH WORK

Altman Foundation—For Peritonitis Research Fund....	2,500.00
Anonymous—Through Dr. Bela Schick—For Special Research in Allergy and Radiation. (On account \$4,000.00 grant)	2,000.00
Mrs. Benjamin H. Homan—For the Isidore Harnsheim Fellowship	1,500.00
Anonymous—Travelling expenses for full-time Research Workers in the Department of Laboratories	1,000.00
Dr. Leo Kessel—For Electro-cardiographic Research	1,000.00
Misses Ida and Rose Frankenheimer—For the L. S. Frankenheimer Fellowship Fund in Pediatrics.....	600.00

FOR EXPERIMENTAL GASTRO-ENTEROLOGY RESEARCH WORK

Dr. Albert A. Berg.....	2,500.00
Mr. Lucius N. Littauer.....	1,000.00
Mr. Ludwig Vogelstein.....	1,000.00

DONATIONS FOR SPECIAL PURPOSES

Estate of Jacob Mayer—For equipping and maintaining Pneumonia Room in memory of Jacob Mayer	30,000.00
Mr. David A. Schulte—On account of operating Out-Patient Dental Department.....	6,000.00
Philip J. and Hattie L. Goodhart—For Endowment Fund. (Making total fund \$25,000.00).....	5,000.00

PRESIDENT'S REPORT

Mr. Martin Erdmann—For the support of Clinical Pathological Conferences	\$2,500.00
Nathan Hofheimer Foundation, Inc.—For the support of Clinical Pathological Conferences.....	2,000.00

LEGACIES AND BEQUESTS (\$5,000.00 AND OVER)

Estate of Louis N. Kramer—For the endowing of a ward containing 12 beds and to be known as the "Louis N. Kramer Memorial".....	100,000.00
Estate of Joseph Frank—(Making the total legacy \$446,985.60)	10,774.04
Estate of Betsy S. Korminsky.....	5,000.00
Estate of Pauline Myers.....	5,000.00

To all those who have thus proven their interest in our institution we tender our heartfelt thanks and we are encouraged by the confidence shown in their generous thought. I feel I should again call attention to the fact that Mount Sinai Hospital contrary to a prevailing impression is by no means a rich institution. It is true that we have a very fine plant but our cash resources in comparison thereto are so meagre that they might be called negligible and we are practically entirely dependent on current receipts.

Prevailing conditions show more clearly than ever that an institution of such magnitude must have a considerable endowment to fall back on in times of stress and it is hoped that within a reasonable time the necessity of such endowment will be understood and appreciated by some of those who are fortunate enough to be in a position to help meet the situation.

The thanks of the Trustees are due and are herewith most cordially tendered to the City authorities for the many courtesies shown, to the managers of the Ladies' Auxiliary and of the Social Service Department for their invaluable cooperation, to Mr. Mason of Messrs. Hoadley, Lauterbach & Johnson for his continued attention to some of our legal matters, to Mr. Alfred Lowenthal for his volunteer services as photographer, to Dr. Turner, Dr. Manheimer, Mr. Miller, Mrs. Mendelsohn, Miss Slator and Miss Erwin for the devoted performance of their duties and their sympathetic attitude towards those seeking our assistance

PRESIDENT'S REPORT

and to all members of the operating force for the conscientious and painstaking fulfillment of their manifold and oftentimes difficult and delicate tasks.

New York's second important Medical Center, formed by the linking of the New York Hospital with Cornell University, will soon be an accomplished fact. Hospitals working in conjunction with under-graduate medical colleges enjoy, in certain respects, many benefits. Several hospitals not so connected, such as Mount Sinai, have shown that scientific standing and prestige of first rank can be achieved independently of close college affiliations. This enviable position can only be maintained by never relaxing in efforts to render the highest type of service to our patients, in the selection of the best medical talent, in the training of the younger generation of the medical profession and by multiple activities in the field of intensive scientific study of disease.

Your Trustees look into the future of Mount Sinai Hospital with the greatest confidence. They feel that the institution will be able to retain its position in the front rank of hospitals devoted to the care of the sick and the advancement of medicine. In their task they need and they earnestly bespeak the good will, the cooperation and the financial support of the community.

GEORGE BLUMENTHAL,
President.

RESOLUTION ON THE DEATH OF
MRS. GEORGE BLUMENTHAL

The Board of Trustees of The Mount Sinai Hospital, upon learning of the death of Mrs. George Blumenthal, have given expression to their sentiments in the following minute:

"We mourn the loss of Mrs. George Blumenthal as one who was a true friend of this Institution and whose thoughts and actions were ever in its interest.

"As the wife of our beloved President, she was an inspiration to him in his generosity and joined with him in his lavish giving.

"Her interests were not confined to any one type of work, but she closely studied and liberally supported many philanthropies, including particularly those dedicated to the advancement of the Fine Arts, of which she was a gifted exponent.

"To our President, we extend our very great sympathy upon the loss of one who was so dear to him."

LEO ARNSTEIN,
Acting President.

ARTHUR H. HARLOW,
Secretary.

RESOLUTION ON THE DEATH OF EMANUEL VAN RAALTE

At a Special Meeting of the Board of Trustees of The Mount Sinai Hospital, held on Saturday, September 27th, 1930, announcement having been made of the death of Mr. Emanuel Van Raalte, the members present decided to express their sentiments in the following minute:

"We have learned with great sorrow of the untimely death of Mr. Emanuel Van Raalte, a member of our Board, who passed away suddenly this morning after a brief illness.

"During his twenty years of faithful service to the interests of the Hospital and its patients, he has impressed every one of us by his keen intelligence and sound judgment in handling the many hospital problems. During the earlier years of his connection with the Institution, he rendered invaluable service by his indefatigable labors as a member of the Membership Committee.

"Apart from his work with the Hospital, Mr. Van Raalte was an outstanding figure in the commercial and charitable life of the community, and in his death the city has lost a valuable citizen and the Hospital a sympathetic and devoted friend.

"To his bereaved family we express our heartfelt sympathy in the great loss which they have sustained."

It is further resolved that the Board of Trustees attend the funeral in a body, that a copy of these resolutions be sent to the members of the family and that the flag of the Hospital be flown at half-mast until after the funeral.

LEO ARNSTEIN,
Acting President.

ARTHUR H. HARLOW,
Secretary.

RESOLUTION ON THE DEATH OF DANIEL GUGGENHEIM

At a special meeting of the Board of Trustees of The Mount Sinai Hospital, held on Monday, September 29th, 1930, announcement having been made of the death of Mr. Daniel Guggenheim, the members present expressed their sentiments in the following minute:

"It is with real regret that we have learned of the passing away of Mr. Daniel Guggenheim, who was a Trustee of this Institution from 1889 to 1891 and who had at all times shown himself to be a true friend of The Mount Sinai Hospital.

"Through his generosity and that of his sister and brothers, the splendid Private Pavilion, dedicated to the memory of their parents, Meyer and Barbara Guggenheim, was made possible.

"Mr. Guggenheim was an outstanding figure in the world of philanthropy as well as in industrial circles, and in both fields he leaves behind him many achievements, monuments as to his ability. He endeared himself to all who knew him by his intense humanity, his modesty and his charm of manner.

"To his bereaved family we express our heartfelt sympathy upon the great loss which they have sustained."

It was further resolved that the Board of Trustees attend the funeral in a body, that a copy of these resolutions be sent to the members of the family and that the flag of the Hospital be flown at half-mast until after the funeral.

LEO ARNSTEIN,
Acting President.

ARTHUR H. HARLOW,
Secretary.

REPORT OF THE ACTIVITIES OF THE MEDICAL STAFF FOR THE YEAR 1930

I beg to submit herewith a brief report of the activities of the Staff of the Hospital. The year 1930 has seen no diminution in the activities of the Medical and Surgical Staff of the Hospital. So far as the clinical services are concerned, the economic stress has, if anything, increased the number of patients treated in the wards of the Hospital as well as in the Out-Patient Department.

LECTURES: During the year the following lectures of general medical interest were delivered in the Blumenthal Auditorium:

1. Miss Mary Chadwick, a member of the British College of Nursing, London, England, on the "Application of Psychology in Nursing."
2. Dr. Isador Greenwald, Department of Bacteriology of New York University, on "Calcium Metabolism."
3. Professor L. Lichtwitz, Director of the Medical Division of the City Hospital of Altona-Elba, a series of five lectures on—
 - (a) "Conceptions of Pathological Physiology of the Kidney."
 - (b) "Theory and Practical Application of Diuretics."
 - (c) "Diabetes Insipidus (Hypophyseal Diseases)"
 - (d) "Gout."
 - (e) "Stone Formation."
4. The William Henry Welch Lectures, by Theobald Smith, Director Emeritus of the Department of Animal Pathology, Rockefeller Institute for Medical Research, Princeton, New Jersey, on—
 - (a) "The General Problem of Respiratory Diseases as Illumined by Comparative Data."
 - (b) "A Comparative Study of Spontaneous and Induced Streptococcus Disease in the Same Species."
5. Dr. William Albert Hoffman, Assistant Professor of Parasitology, School of Tropical Medicine of the University of Porto Rico, on "Schistosomiasis in Porto Rico." (Illustrated by motion pictures.)

THE LABORATORIES: While a detailed report of the Laboratories is published elsewhere it is timely to call attention to the marked increase in the activity of this department. Only a comparatively

short time ago, outside of the regular Laboratory staff, work was done by a few men representing only the Medical and Surgical departments of the Hospital. Today, in the same building, active work is being carried on by representatives of almost every clinical department of the Hospital. Not only is the clinical staff making efforts to acquire a broader and more comprehensive knowledge of the diseases with which they are dealing, but, stimulated by the sympathetic interest of the Director of Laboratories and his staff, it is carrying on investigative work in many directions. In order to accomplish this, the facilities of the Laboratory are strained to the utmost. The crowding shows clearly the need for larger quarters.

The following papers based wholly or largely upon work done in the Laboratory have been published during the current year:—

Peptic Ulcer of Meckel's Diverticulum and Ileum.

Thrombosis of the Portal and the Hepatic Veins.

Pentosuria in Children. With Laboratory Data on Four Cases.

Hemangioma of the Pelvic Connective Tissue.

A Review of the Progress in Endocrinology of Interest to the Gynecologist and Obstetrician.

The Female Sex Hormone. XI. Utilization of the Hormone in the Normal Woman: Effect of Abnormal Kidney Permeability in the Production of Amenorrhea and Sterility.

Osteitis of the Petrous Pyramid of the Temporal Bone, Associated with Paralysis of the External Rectus.

Demonstration of Local Immunity of the Peritoneum by Means of the Shwartzman Phenomenon.

Variability of Menstrual Rhythm and Character.

Cyclical Changes in Vaginal Mucous Membrane.

Melanosis Uvae and Melanoma of the Iris in Neurofibromatosis (Recklinghausen).

Acute Tuberculous Periphlebitis of the Retina and Optic Nerve.

A Standardized Procedure Suggested for Microscopic Studies on the Heart. With Observations on Rheumatic Hearts. Observations on Fatal Bronchial Asthma. A Report of Two Cases.

Spasm-Producing Substance in the Sputum of Patients with Bronchial Asthma.

- Bronchial Asthma and Pulmonary Tuberculosis.
- Insulin Inactivation by Human Blood Cells and Plasma in Vitro. Effect of Normal and of Diabetic Blood on Insulin Action.
- Insulin Inactivation by Human Blood Cells and Plasma in Vitro. II. Effect of Infection on Insulin.
- Micro Colorimetric Studies. II. Estimation of Phosphorus; Molybdic Acid-Stannous Chloride Reagent.
- The Causes of Death after Operation. A Study based on Eight Hundred Autopsies.
- Differential Blood Cultures.
- Concentration and Purification of Antityphoid Horse Serum.
- Observations on Agranulocytosis.
- Acute Leukemia.
- Plasmocytoma of the Nasal Cavity.
- Concerning the Specificity and Nature of the Phenomenon of Local Skin Reactivity to Various Bacterial Filtrates.
- Lokale Hautreaktivität für Verschiedene Bakterielle Kulturfiltrate. Ein Neues Immunologisches Phänomen.
- The Effect of Bacterial Variation upon the Factors Necessary for the Phenomenon of Local Skin Reactivity to Bacterial Filtrates.
- Thrombo-Angiitis Obliterans (Buerger). IV. Reduction of Blood Volume.
- Über Umesterungen im Lipoidstoffwechsel.
- Absorption of Glucose Galactose Mixtures in the Intestine.
- The Hagedorn-Jensen Method Applied to Various Sugars. Relation of Reducing Power to Configuration.
- Selective Fermentation. I. Alcoholic Fermentation of Glucose, Fructose and Mannose Mixtures.
- The Distribution of Lipoid in a Case of Niemann-Pick's Disease Associated with Amaurotic Family Idiocy.
- Intravenous Urography by Means of the Sodium Salt of 5-iodo-2-pyridon-N-acetic Acid.

SURGERY: Among the new features on the Surgical Services is the grouping of men representing allied specialties into teams for studies. New fields of investigation that offer much promise are opening because of this mutually stimulating group work. Thus,

a combination of studies by the internist, bronchoscopist, radiologist, bacteriologist, pathologist and surgeon has resulted in a better understanding of abscess of the lung and its allied conditions, and better results in their surgical treatment.

Work on the problem of closure of large lung cavities in the surgical treatment of pulmonary tuberculosis is also under way. The treatment of severe states of septicemia by more radical operative measures has had some degree of success, enough to encourage future efforts in that direction. The causes of mortality following operations were investigated in conjunction with the Department of Laboratories. Studies have been continued on the technique of prolonged intravenous administration of fluids in serious clinical conditions, and the method is now fairly generally adopted in the Hospital. The clinical studies have been checked by laboratory studies on the velocity of the flow of fluid. Renewed consideration is being given to the serious mortality from acute appendicitis still prevailing at this and other institutions. Neurological surgery, done in close cooperation with the Neurological Service, has continued progress of previous years; more radical operative procedures for otherwise hopeless lesions of the brain have met with some measure of success. Additional studies are being made that may ultimately throw some light on the nature of the condition commonly termed thrombo-angiitis obliterans.

The publication of a book on "Diseases of the Urinary Tract in Children," based on work done in the Hospital, is the first contribution to systematic study of these diseases in children. A report was also made at the Madrid Congress of the International Urological Congress in the Spring of 1930 on conservative kidney surgery in connection with hydronephrosis. At the American Urological Congress in June 1930, a paper was presented, with the X-ray Department's cooperation, on the X-ray control of kidneys in the operating room in the course of operations for the removal of stones. This procedure appears to represent an advance over former haphazard operating room control. In addition, further attention was directed to the advantages and future possibilities of intravenous pyelography with Uroselectan. This new method of visualizing the urinary tract is destined to have a wide application and to be of considerable help to the clinician.

As in previous years, patients suffering from diseases of the thyroid gland requiring surgical intervention have been segregated

for study and therapy. Studies in the surgical causes of jaundice have been continued. Among the published papers have been the following:

Hematological studies as a basis for determining the risk of post-operative hemorrhage in jaundiced patients.

Asymptomatic cholelithiasis.

Operative results in partial and subtotal gastrectomy for gastro-duodenal ulcers.

Acute pancreatitis.

Clinical and experimental studies have been continued on the gastro-enterological service.

GYNECOLOGY: The clinical activities on the Gynecological Service have proven increasingly variable. There have been noted increasing numbers of patients with large fibroids, complicated inflammatory conditions and advanced cases of carcinoma. Treatment for the repair of birth injuries has broadened and different technics applicable to various types of conditions have been utilized, particularly to vaginal hysterectomy for prolapse in selected cases. This service is now reviewing the last thousand cases of birth injuries in order to observe the final results obtained. During the year four cases of rare abdominal tumors in young children have been treated with excellent results, due partly to operation and partly to radiotherapy.

The intimate cooperation between the radiotherapeutic and gynecological departments has continued. The gynecologists place the utmost reliance in post-operative radiation of intra-abdominal cancer and do not operate on cancer of the cervix since the results of radiotherapy are so excellent.

In the Out-Patient Department the special morning clinics continue to function gratifyingly. One of the staff has grouped a number of women suffering from menopause symptoms or from bleeding, and is testing the value of the newer endocrine products under strict critique. The special endocrine clinic continued its study on a comparatively small number of patients. The leucorrhea clinic is testing the efficacy of new methods as compared to the old and tried methods for the relief of this annoying symptom. In the cystoscopic clinic, many Out-Patient Department cases were thoroughly studied, some lending themselves to ambulant

treatment, others requiring admission to the Hospital on the Gynecological or Genito-Urinary Services. The group for contraceptive advice for clinical indications and the group for special studies of psychoses and neuroses have proven of great help to both the Out-Patient Department and ward services. The sterility clinic continues its investigation with Out-Patient Department and Hospital patients.

The female sex hormone blood and urine test has proved its value in the diagnosis and treatment of many conditions. These tests have been accepted more and more by the profession, in this country and abroad. During the year the gynecologist delivered a Harvey lecture based on this subject; other lectures were given before the Academy and other Medical Societies. These studies have been extended to include the anterior pituitary gland as well as the ovaries. Studies have been continued on the cystology of the menstrual blood of the vaginal cycle, and on the changes of endometrium. Work has also been continued in the Department of Gynecological Pathology, a subdivision of the Surgical Pathology.

MEDICINE: In addition to the routine care of patients, the following subjects are under investigation:

The management of patients with diseases of thyroid and the involuntary nervous system; differential blood cultures in cases of sepsis; the therapy of rheumatic fever; cases of infectious arthritis; eye changes in diabetes in contradistinction to those due to arteriosclerosis; continuous recording of heart rate during operations; studies with the cardi tachometer; diagnosis of early organic heart disease in children; bronchial asthma and pulmonary tuberculosis; the cholesterol partition of the blood plasma in diseases of the liver; the blood lipoids in nephrosis and chronic nephritis; tyrosinase method of detecting tyrosin in the urine; thrombosis of the portal and hepatic veins; metabolism of the S and R forms of pneumococcus; new method for the determination of tartaric acid in urine; the normal heart rate; infectious asthma and its relation to chronic sinus and pulmonary disease; the pathogenesis of recurrent winter cough; blood cholesterol in hepatic and biliary diseases; neoplasms of the pleura; benign tumors of the bronchus; benign localized tumors of the pleura; follicular lymphoblastoma; lymphosarcoma; correlation of the various types of clinical and pathological pictures of Bright's

REPORT OF THE MEDICAL STAFF

disease; clinical diagnosis of visceral syphilis; the non-excretory functions of the liver; liver function tests; anatomy of the bronchial tree; suppurative diseases of the lungs; amino-acid metabolism in health and disease; liver function in hyperthyroidism; factors influencing the hepatotoxic action of cinchophen; the metabolism and excretion of tartaric acid; biliary cirrhosis; allergy as a cause of liver degeneration; rheumatic fever in Porto Rican immigrants; renal complication of various types of endocarditis; the influence of polycythemia on thrombosis of the coronary arteries; relationship of glomerulonephritis to the recovery from infection; the serum therapy of typhoid fever.

There also have been published papers on:

1. Characteristic Electrocardiograms and Roentgenograms in Arterial Hypertension. Their Prognostic Significance.
2. Electrocardiographic changes in Pneumonia.

PEDIATRIC: During the foregoing year there have been manifold activities on the Pediatric Service. Studies in metabolism have been continued on children of unusual weight and on children during the period of puberty. The relation of tonsillectomy to diphtheria susceptibility has been studied, as has the blood antitoxin in children with negative skin tests. Investigation of epileptic children has been continued. The diabetic clinic has increased in size; some of the children attending it have graduated into an adolescent group which was formed in conjunction with the adult diabetic clinic. Studies on the effect of insulin on metabolism are being carried out. Investigation of sugar tolerance and peritonosuria were completed. The growth of tubercle bacilli from the blood is being studied. Cases of intestinal intoxication were made the subject of particular research and new therapeutic procedures have been tried out. Studies in heart murmurs are being carried out in conjunction with the electrocardiographic department.

DERMATOLOGY: Patients suffering from the more serious skin affections, those requiring extended study, and those that cannot be handled properly in the Out-Patient Department continue to be admitted to this service. Apart from the routine work, the staff has undertaken studies dealing with the problem of dermatophytosis. The recent addition of a special department of

Dermatological Pathology has made it possible to study cases more thoroughly and to render more efficient service to the patient.

The following papers have been contributed by members of the staff during the year:

1. Cholesterin and Lecithin findings in Dermatophytosis.
2. Hypersensitiveness of the skin to Arsphenamin as determined by the contact test.
3. Syphilitic parotitis.
4. Embryology of Pigment Formation.
5. The incidence of Trichophytin reaction in casual Dermatologic patients.
6. Eczema due to fungus in an 18-month old child.
7. Epidermophytids of the hands and Epidermophytosis of the feet.
8. The origin of Dendritic cells.

LARYNGOLOGY: The close cooperation with the newly formed chest group in the bronchoscopic study of diseases of the lung and bronchi has been an important extension of the service of the Laryngological Department. Radium has been applied to the treatment of malignant disease of the bronchi and esophagus. The study and treatment of adenoma of the bronchi and the study of the technique of laryngology under local anesthesia have been continued.

OTOLOGY: In addition to the clinical activities, studies on ear pathology are being continued. Particular attention is being paid at the present time to those studies dealing with the pathways of the spread of infection from the ear and mastoid to the intracranial structures. During the current year a number of papers based on these investigations have been published. They are leading to a better understanding of the manner in which intracranial complications occur, and are of considerable practical value. A study is also being made of a rare condition, viz: cancer of the ear.

OPHTHALMOLOGY: During the year a follow-up clinic was inaugurated for the patients discharged from the Service. This has functioned successfully as practically all discharged patients return when requested to do so. The service has cooperated with the Neurological Service in the study of eye symptoms of patients on the Neurological wards. Several post-graduate teaching

courses were given and were well attended. The foundation has been laid for a collection of interesting photographs of the backgrounds of eyes; photographs of important fundus conditions seen in the various wards have been attached to the history charts as an aid in the observation of progressive eye changes. The Department of Eye Pathology has begun the collection of slides of interesting and rare cases.

The following articles were prepared by members of this Service:

1. Paralysis of an Extra-Ocular Muscle after Spinal Anesthesia.
2. Metastatic Bacillus Coli Panophthalmitis from Calculus Pyonephrosis.
3. Hereditary High Myopia.
4. At the Chicago Meeting of the American Academy of Ophthalmology and Oto-Laryngology a paper was read on "Rosette Formation in Eyes of Irradiated Human Embryos."
5. A Sign in Differential Diagnosis of Lesions Producing Unilateral Exophthalmos.
6. Ocular Pathology of Niemann Pick's Disease.
7. Ophthalmic Neurological Cases.
8. Lantern Slide illustration of Fundus Changes.
9. Cured cases of Gonin's Operation for Retinal Detachment.

Studies have been begun on the following subjects:

1. Improved Methods of Focal Illumination and Transillumination.
2. Metastatic Carcinoma of the Stomach in the Sheath of the Optic Nerve.
3. Spongio-Neuro Blastoma of the Optic Nerve.
4. Hemorrhage in the Arachnoid Space surrounding the Nerve in an Irradiated Fetus.
5. Causes and Nature of Exophthalmus.
6. Types of Infection of Operative Eyes and its Prevention.

RADIOLOGY: The routine activities of the Radiological Department have been maintained at approximately the same level as noted in the last Annual Report. During the year 1930 there were 16,661 Roentgen examinations as compared with 17,303 in 1929.

The extremely important work on intravenous urography has been continued; the number of such examinations being requested from the clinical services of the Hospital and of the Out-Patient Department is continually increasing. The method is no longer experimental; the accumulating information regarding kidney, ureter and bladder physiology and pathology will, without doubt, contribute to a very considerable degree to our knowledge of these processes. Addresses on this subject, which were fundamental, were made before the meeting of the American Medical Association and published in the Journal of that Society. Uroselectan has also been used experimentally for direct visualization of blood vessels, arterial and venous; as a medium for retrograde pyelography, and for the injection of various sinuses.

Cooperation with the Pathological and with other Departments has resulted in unusually productive work concerning pulmonary and pleural tumors. Articles on these subjects have been presented at various scientific meetings, including the meeting of the New York Roentgen Society, held at the Blumenthal Auditorium in October, 1930.

Studies concerning the correlation of roentgenological and pathological findings in diseases of the gastro-intestinal tract are being made. The first article "Chronic Hyperplastic Tuberculosis of the Colon" is about to appear in the American Journal of Roentgenology. Studies on post-operative biliary fistulae, after injection of lipiodol, have provided another important diagnostic aid; the work has been reported in the Annals of Surgery.

Apparatus consisting of a modified vertical Bucky diaphragm on a special frame and a specially constructed chair have been added to the Department, and are being used more particularly for examination of the skull after endo-lumbar and intra-ventricular injections of air. These examinations are now, therefore, possible in the erect position, a technique which avoids many of the distortions and possible errors contingent upon previous methods. This apparatus is also of service in other examinations best made with the aid of the vertical Bucky. A portable Bucky apparatus has also been acquired and serves the highly important function of improved examinations at the bedside.

REPORT OF THE MEDICAL STAFF

Improvement in the purely technical branch of radiological work has been the subject of special study during the past year. The department now has two full-time lay technicians. The dark-room facilities have been enlarged by additions to washing and drying space. In addition, increased power capacity has been obtained by the introduction of more modern x-ray tubes of foreign manufacture, resulting in better roentgenograms at less cost.

RADIOTHERAPY: The Radiotherapy Department has shown a marked increase in the number of patients treated. There have been 690 new cases in 1930 as compared with 599 in 1929; the total number of patients in 1930 was 3,993 as compared with 3,055 in 1929; the total number of treatments given was 5,897 in 1930, as against 4,531 during the preceding year; the total number of patient visits was 11,356 and 9,324 respectively. The number of radium cases has increased by 62. The number of malignancies shows an increase from 30 per cent of the total during the preceding year to 40 per cent in 1930.

In general, the types of cases have not varied from those of previous years. During the second half of 1930 a new technique has been adopted in the treatment of malignant conditions; this requires a much longer period of exposure to radiation. So far it has shown better results than have been obtained previously in malignancies of the oral cavity, pharynx and larynx as well as in breast cases.

A new water-cooled Metalix treatment tube with a special tube stand and a new high frequency machine were added to the department. The Metalix tube is built with its own protection, is more flexible and gives better protection to, and requires less covering of, the patients with heavy lead rubber. It thus insures greater comfort during the time of exposure. This tube has greater capacity than those previously used and has enabled us to employ the new technique with longer periods of individual treatment.

The increase in the number of patients as well as the change in technique has made necessary the addition of a second technician to the personnel of this department.

REPORT OF THE MEDICAL STAFF

A full-time social worker has also been engaged. Her services have proven invaluable to this department. Through her we have been able to trace and follow-up patients who were treated as far back as 1924, thus enabling us to see the results of radiotherapy after so many years. Her services were even more valuable in that she has kept in touch with the patients who thus could be followed up regularly and could be induced to keep their appointments so that we have been able to judge the results of our treatments and discover early recurrences or metastases.

The charting system has been improved so that we now have a better tabulation of our cases and of the results of our treatments.

If the demands for radiotherapy increase (and there is every likelihood they will) there will soon be need for more space, more radium, and another therapy machine.

The constantly increasing number of post-graduate students, particularly for the extra-curricular courses, gives evidence of sustained interest in this educational effort.

ISIDORE FRIESNER, M.D.,
President of the Medical Board.

TRUST FUNDS FOR SPECIAL PURPOSES

Florette and Ernst Rosenfeld Foundation —Founded for the establishment and support of a Department for Radium and Radiotherapy	
Original Donation	\$76,000.00
Income to December 31st, 1930, including interest on principal, income from investments, etc.....	27,464.35
	103,464.35
Cost of Installation of Equipment, Cost of Radium and maintenance of the Department of Radium and Radio- therapy to December 31st, 1930.....	51,949.80
	<u><u>\$51,514.55</u></u>

ENDOWMENTS FOR SPECIAL PURPOSES

Benjamin Altman Fund	\$100,000.00
Established by provision in the will of Benjamin Altman; one-half of the income to be utilized to defray expenses of the Neurological Department, the remainder for the general purposes of the institution.	
Marjorie Walter Goodhart and Florence Henrietta Walter Children's Clinic Endowment	100,000.00
Founded by their parents, Florence B. and William I. Walter; income to be used for the purposes of Children's Clinic.	
Marjorie Walter Goodhart and Florence Henrietta Walter Memorial Fund	25,000.00
Established by provision in the will of Miss Rosie Bernheimer; income to be applied towards the running expenses of the Children's Clinic.	
Babette Lehman Fund	100,000.00
Founded by Mrs. Babette Lehman; income to be utilized for the advancement of preventive medicine.	
Louis W. Neustadter Fund	100,000.00
Founded by provision in the will of Mrs. Henry Neustadter; distribution of income to be made annually on the 16th day of March, a portion to needy and indigent patients in the Hospital on that date, the remainder for the general purposes of the Hospital.	
Mount Sinai Hospital Fund for Medical Education	50,000.00
Joseph F. and Zillah Cullman contributed \$25,000.00 as a nucleus of said fund, and \$25,000.00 contributed by the estate of Henry P. Goldschmidt; the income to be used to defray expenses arising out of clinical lectures, demonstrations and conferences, and for cognate purposes.	
Alfred A. and Ruth M. Cook Fund	50,000.00
Founded by Alfred A. and Ruth M. Cook; income to be applied to special experimental work in the Social Service Department.	
Magdalene M. and Charles Klingenstein Fund	47,000.00
Jacob Mayer Fund	30,000.00
Founded in memory of Jacob Mayer for equipping and maintaining a pneumonia room.	
Helen B. Millhauser Fund	27,000.00
George Blumenthal, Jr. Fellowship Fund	25,000.00
Founded by Mrs. Florence Blumenthal; income to be applied to the maintenance of two Fellowships in Pathology.	

ENDOWMENTS FOR SPECIAL PURPOSES

(Continued)

Harriet Meyer Memorial Fund	\$25,000.00
Founded by Eugene Meyer; income to be used for experimental work in the Social Service Department.	
Etta C. Lorsch Memorial Fund	24,000.00
Established by provision in the will of Etta C. Lorsch (\$10,000.00); by members of the Board of the Social Service Auxiliary (\$10,000.00); and by many of her friends (\$4,370.00); income to be disbursed by the Social Service Auxiliary for the special country care of children.	
Ambulance Fund	20,000.00
Established by Murry Guggenheim; income to be applied toward the maintenance of the ambulance.	
Murry Guggenheim Scholarship Fund	20,000.00
Founded by Murry Guggenheim; income to provide medals and twelve scholarships of \$100 each annually to nurses of the Mount Sinai Hospital School of Nursing.	
Moritz Warburg Social Service Fund	20,000.00
Founded by Felix M. and Paul M. Warburg; income to be applied to the work of the Social Service Department.	
Robert and John Kaufmann Vacation Fund	11,000.00
Founded by Max Kaufmann; income to be used for providing vacations, preferably for crippled children.	
Theodor Escherich Fellowship Fund	10,000.00
Founded by an anonymous donation; income to be applied to the maintenance of a Fellowship in Pathology.	
Moses Heineman Fellowship Fund	10,000.00
Founded by Moses Heineman; income to be applied to the maintenance of a Fellowship in Pathology.	
Dr. Henry Koplik Fund	10,000.00
Established by provision in the will of Dr. Henry Koplik; income to be disbursed by the Social Service Department and devoted solely to the care of infants and children, whose parents are unable to pay ward fees.	
Eugene Meyer, Jr. Fellowship Fund	10,000.00
Founded by Eugene Meyer, Jr.; income to be applied to the maintenance of a Fellowship in Pathology.	
William Henry Welch Lecture Fund	10,000.00
Established by Dr. Emanuel Libman; the income to be used to provide lectures to be named after Dr. William Henry Welch of Johns Hopkins University.	

ENDOWMENTS FOR SPECIAL PURPOSES

(Continued)

Emil Wolff Social Service Fund	\$10,000.00
Established by Emil Wolff; income to be applied to the work of the Social Service Department.	
Charles and Camilla Altschul Fund for Nursing in Wards	5,000.00
Founded by Charles and Camilla Altschul; to defray the expense of special nursing in the wards.	
Isaac C. Bishop Fund	5,000.00
Established by provision in the will of Morris Bishop; income to be used for the relief, care and benefit of poor patients suffering from cancer.	
Dr. Abraham Jacobi Library Fund	5,000.00
Established by the Board of Trustees of the Mount Sinai Hospital to commemorate the eightieth birthday of Dr. Abraham Jacobi; income to be applied to the purchase of books for the Hospital Library.	
Edward Gamaliel Janeway Lecture Fund	5,000.00
Founded by an anonymous donation; income to be utilized to bring important investigators to Mount Sinai Hospital to present the result of their work.	
Fannie C. Korn Fund	5,000.00
Founded by Mrs. Fannie C. Korn—In memory of Henry Korn; for the establishing and maintaining of a splint and apparatus room for the Orthopedic Service.	
Mount Sinai Hospital Alumni Fund	4,600.00
Donation of Dr. H. F. L. Ziegel; income, and if necessary, capital, to be expended in defraying part or all of the cost of caring in private rooms of the Hospital for members of the Associated Alumni of Mount Sinai Hospital, the expenditures for any one case not to exceed \$200.	
Morris Littman Social Service Fund	3,000.00
Established by provision in the will of Morris Littman; income to be applied to the work of the Social Service Department.	

MEDICAL RESEARCH FUNDS

S. S. Prince Research Fund	\$100,000.00
Established by provision in the will of S. S. Prince; income to be used for research work.	
Henry and Emma Rosenwald Foundation	100,000.00
Established by provision in the will of Mrs. Emma Rosenwald; the income to be used for research work. If such work becomes impracticable or inadvisable, the income is to be used for any other purpose designated by the Trustees.	
Kops Foundation for Pathological Research	60,000.00
Income to be used from time to time for special work in the Pathological Department, under the direction of the Board of Trustees, preference to be given to research.	
The Lorsch-Sachs Endowment Fund for the Promotion of Medical Research	60,000.00
Created by Josephine Lorsch, Nellie and Harry Sachs in memory of Albert Lorsch, Jenny and Sigmund Lorsch; income to be used for the study of some promising scientific problems, especially for research work bearing upon the origin and cure of cancer.	
Max Nathan Laboratory Fund	30,000.00
Established by his wife and daughters; the income to be used primarily towards the payment of salaries in the Laboratory Research Department.	
Eugene Littauer Research Fund	25,000.00
Founded by Eugene Littauer in memory of Nathan Littauer; income to be used for medical research work.	
Elias Asiel Research Fund	21,000.00
Founded by Irma A. Bloomingdale and Nelson I. Asiel; income of which is to be applied to the payment of salaries or fellowships in the research work of the Pathological Department.	
Rosie Bernheimer Memorial Fund	10,000.00
Established by provision in the will of Miss Rosie Bernheimer; income to be used for clinical research work.	
Morris Fatman Medical Research Fund	10,000.00
Founded by Morris Fatman in memory of Solomon A. Fatman.	
Morris J. and Carrie Hirsch Fund	10,000.00
Established by Walter A. and Steven J. Hirsch in memory of their parents; income to be devoted to work in connection with the study of cancer.	
Carried forward	\$426,000.00

MEDICAL RESEARCH FUNDS

(Continued)

Brought forward	\$426,000.00
Etta C. and Arthur Lorsch Fund.....	10,000.00
Founded by Etta C. and Arthur Lorsch; income to be devoted to Laboratory research work.	
Elsie and Walter W. Naumburg Fund.....	10,000.00
Established by Mr. and Mrs. Walter W. Naumburg; income to be used exclusively for Chemical Research at Mount Sinai Hospital.	
Virginia I. Stern Fund.....	10,000.00
Legacy; income to be used for medical research work.	
Herman Younker Fund for Clinical and Pathological Research	10,000.00
Established by Mrs. Herman Younker; income to be used exclusively for clinical and pathological research.	
Leo L. Doblin Endowment Fund for Research Work.....	7,750.00
Legacy; income to be used solely for research work in the pathological laboratory (On account of \$10,000.00 legacy).	
Arthur E. Frank Medical Research Fund.....	7,500.00
Established by provision in the will and in memory of Arthur E. Frank; the income from this fund is to be devoted to Laboratory research work, preferably in connection with the study and cure of cancer.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

During the past year, plans have been completed and contracts signed for the long awaited alteration of the old Nurses' Home as the first step of a two-stage construction and improvement program which will provide, among other benefits, additional space for the Out-Patient Department. Among the most important improvements is a new X-ray department for out-patients only which will relieve the pressure on the present X-ray department in time to permit it to absorb the increased demands which will come from the new Semi-Private pavilion. These plans were described tentatively in the report made last year. The final studies of the plans resulted in their approval without material change. The work is now under way. Plans are now in preparation for the second stage involving alteration of the existing out-patient building which will include the construction of a ramp connecting the first floor of the present Out-Patient Department with the accident and reception ward.

The professional work of the Dispensary was carried on by an average daily attendance during 1930 of 103 physicians. In previous reports mention was made of the slowly increasing numbers of patients and visits; the increase, however, was relatively small. In 1928, about 207,000 visits were recorded; this reached 208,000 in 1929. In 1930, the Out-Patient Department recorded a new high total of 222,489. This increase of 15,000 visits, or seven per cent. over the previous year, was quite unusual inasmuch as there were no new activities in the clinics to account for the increase. It was more remarkable in the face of public health records which showed 1930 to be an outstanding year for good health. Never before, according to statistics compiled by the Department of Health and by insurance companies, did the country as a whole suffer from so little illness. The only rational explanation for this paradox appears to be the economic situation forcing more patients to seek Out-Patient Department care at nominal or no cost.

On several days the number of admissions exceeded 1,000, more patients than have been seen in one day in the Dispensary since the war. That this increase in service was made possible at all was due entirely to the unselfish work of the volunteer medical physicians, who gave extra time willingly in order to

treat more patients in urgent need of medical care. The Committee on Out-Patient Department takes this opportunity to express its warm appreciation of the invaluable services rendered to the sick poor by this devoted and competent medical staff.

The capacity of the Out-Patient Department with more than fifty individual clinics has been estimated at 200,000 visits a year. The number of applicants for admission exceeds by far the capacity of the building and of the staff to render a modicum of adequate medical service; accordingly admissions to several of the clinics have been restricted to numbers which can be treated adequately. It was necessary to turn away many patients for lack of space and physicians, and it has been estimated that 15,000 new patients, who would have eventually accounted for 75,000 visits, were turned away for this reason. While the number of total visits increased seven per cent, the number of free patients increased in greater proportion.

Following our practice in previous reports, we have not included visits to the X-Ray Department by out-patients which numbered about 10,000, visits to the Radiotherapy Department which accounted for 11,356 more, and visits to the Children's Health Class which were 2,553. Follow-up visits of patients discharged from the wards and not regularly admitted to the Out-Patient Department totalled 11,106. Adding these to the regular Out-Patient Department admissions gives a total of visits by ambulant patients in all categories in excess of 255,000. New patients numbering 44,548 were seen in 1930, an increase of 2,657 over the previous year. An increase in the number of return visits in proportion to the number of first visits was observed, satisfactory evidence of the quality of the service and the follow-up of patients. A daily average of 734 consultations was maintained, 48 more per day than in 1929. Twenty nurses and fifteen volunteers were in daily attendance.

The medical clinics experienced some difficulties in administration inherent in the character of the organization, the chief defect of which continues to be the gap between the Out-Patient Department and the ward service. While the contacts are closer than was possible a few years ago, a perfect liaison has not yet been achieved. To decrease this gap as far as possible, the Out-Patient Department staff were encouraged to visit in the Hospital wards regularly and to participate in the weekly ward rounds.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

The Gastro-Intestinal Clinic has been very active, averaging from 50 to 60 new patients monthly and affording excellent opportunities for the physicians to undertake the clinical studies of a number of gastric problems, including special studies in gastric secretion which are the basis of a new method of treating peptic ulcer, the injection treatment of internal hemorrhoids, studies of anacidity especially in patients with pernicious anemia, ulcerative colitis (in collaboration with the Hospital services), a study on cardiospasm (in collaboration with the Mental Hygiene Clinic), and a comparison of biliary drainage with gall bladder X-ray.

The Metabolism Clinic has now a case load of over 1,200 active patients in all of its groups. The diabetes group adds 350 to 400 new patients yearly, while the obesity group accounts for 100 to 150 more. The daily attendance has averaged 50 to 60 patients.

In the Asthma Clinic, seasonal variations in attendance were again noted; the attendance varied from 100 patients in February to more than 400 in June. The staff has published the results of its investigations on infectious asthma and its relation to chronic sinus and pulmonary disease, also studies on recurrent winter cough. The investigations now under way include pharmacological reactions to drugs of allergic and non-allergic patients, perennial treatment of hay fever, immunological studies in infectious asthma, and observations on the relationship between bronchial asthma and arthritis.

In the Tuberculosis Clinic there was a slight increase in activity over previous years. It was noted that the number of children with tuberculosis had increased, due, it is believed, to the change in the character of the neighborhood population. A considerable part of the work of the clinic consists in examining contact cases. Active cases are sent away to institutions as soon as room can be found for them. Only such patients whose disease is inactive or who have completed a course of treatment in a sanatorium are continued in the clinic of the Out-Patient Department. The work of the clinic still remains diagnostic, the curative phase remaining with the established tuberculosis hospitals and sanatoriums. The problem of finding hospital beds for the tuberculous patients has become more difficult because of the increase of the disease. Some patients registered in the clinic have been obliged to wait several months before their turn of admission was reached.

The construction of a bridge on an upper level between the Out-Patient Department and the medical wards is under consideration as a means to facilitate an easy interchange between the Out-Patient Department and the ward service.

The proposed alterations in the medical clinics are planned to increase their usefulness and ease of operation. The increased usefulness will come not so much from enlargement of the space as from a better arrangement and utilization of available areas which will remove many of the factors now causing delay and loss of time and motion. When these changes have been made, more physicians can be accommodated and the services of the entire staff utilized to the better advantage of the patients.

The interesting experiment of grouping certain types of cases within the general medical clinic instead of creating separate clinics has been carried on for more than a year. The thyroid group now has 250 cases in its files of which more than 100 are active. This staff also cooperates with the neurologists and surgeons in the observation and management of these cases. Another internal group which is unusually active consists of arthritic cases. Doubtless, the number of these clinical groups could be increased with some advantage. There are, however, certain disadvantages, for the grouping takes these patients out of the general medical classes which become less interesting and less instructive to the regular staff.

The management of the cardiac clinics for adults, adolescents and children under a single clinical chief has been advantageous. The use of the special charts endorsed by the Cardiac Committee of the New York Tuberculosis and Health Association has resulted in a better clinical history than was formerly secured. One disadvantage is the failure of the histories to maintain a narrative style in spite of which they are more complete than the cards formerly in use. In any event, these and other histories, as always, depend entirely upon the industry and interest of those who make them. The adolescent cardiac cases (those who have graduated from the children's cardiac clinic) are now seen separately each week; later, they are transferred to the adult cardiac group; in this way there is a continuity of observation from early childhood to adult life and an opportunity of coordinating the observations and treatment from the first manifestation of the disease to the terminal phase.

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

The work in the morning pediatric clinic was divided clinically into three groups—infant feeding, malnutrition, and miscellaneous. Patients in the first two were seen by appointment, and the service of the physicians was rotated so that each assistant received training and experience in all groups. Studies were made of the influence of the public school regime on the health of children; the results were presented before the Academy of Medicine and published in monographs.

The studies on the malnutrition of children were continued; the results of observations of the Von Pirquet system of infant feeding in an out-patient department will be published shortly. Studies on the routine feeding of thyroid gland cases and the growth and nutrition of infants are now under way. In other pediatric clinics, researches were continued on epilepsy, on the differential and etiological study of functional and organic heart murmurs, and on Mongolism with special attention to radio-therapy.

The eczema group of the allergy clinic was consolidated with the allergy clinic, and the number of clinic sessions increased from three to four weekly. Studies on the effect of various diets in selected cases of asthma were continued and the results published in a number of articles. The Children's Diabetic Clinic increased its activities during the past year both in the number of children attending and in the extension of its work to an adolescent group who are now attending the adult diabetic clinic. Results of the work were published, and data since the onset of the clinic are now being analyzed for a comprehensive series of papers on juvenile diabetes mellitus.

The work of the Children's Health Class is reported in more detail in the Social Service report. The organization of a Boys' Club to assist in the adjustment of boys, particularly those with seclusive traits, is a new activity. It is hoped to start similar work with girls. New cases admitted totaled 357. A large number of publications and addresses on public health and preventive medicine are credited to the staff of this clinic.

The sociological aspects of the work of the Mental Health Clinic will also be dealt with more fully in the report of the Social Service Department. The physicians in the Mental Health Class have published a number of articles dealing with crime in phantasy

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

and dreams, fetichism in statu nascendi, reactive character, play for the mentally ill, the psychoanalysis of borderline cases, recreation activities for out-patient cases, and technical procedure in child analysis.

The Eye Clinic organized a follow-up service in accordance with the principle, approved by the Board of Trustees several years ago, of keeping under observation as long as necessary patients discharged from the eye ward of the Hospital who are not referred to the Eye Clinic for later treatment. The use of the fundus camera to obtain photographic records of eye conditions in patients on the wards was made available for the Out-Patient Department for a time in order to obtain records of conditions which are more apt to be found in ambulant patients than in bed patients. The publications by the staff included work on ocular findings in post-encephalitic Parkinson's Syndrome, and hereditary high hyperopia.

The year saw the establishment of a long-needed and useful follow-up system in the Otolaryngological Clinic. Closer coordination with the Hospital's service was achieved by a change in the character of the organization and an increase in the number of adjuncts. New work in collaboration with the staff of the Physiotherapy Department was undertaken, including the electro-coagulation of tonsils and other applications of physiotherapy to laryngological conditions.

The Urological Clinics report an increase in activity with every type of urological pathology seen during the course of the year. Many unusual diagnoses were found and many patients were admitted to the Hospital for operation. Studies were made in the pathological changes associated with contracture of the bladder neck to determine the presence of reflux in these cases. Investigations were also made in the use of foreign proteins in the treatment of specific and non-specific infections of the genital tract. The interest of the clinic physicians in these special problems was so great as to prompt many of them to spend additional hours over and above that required for the actual clinical service.

In gynecology, the arrangement by which new patients and the general run of patients have been treated in the afternoon and special groups of cases investigated in the morning, continued to function with a fair degree of satisfaction. It enabled the physi-

REPORT OF COMMITTEE ON OUT-PATIENT DEPARTMENT

cians to study different types of cases with more exactness than heretofore and in consequence afforded additional relief or cure to patients especially investigated.

Post-graduate instruction in the Out-Patient Department during the October-December, 1930 series, included the following: diseases of the circulatory system, ophthalmology, refraction and muscles, diseases of the gastro-intestinal tract, clinical work in mental diseases, cardiac defects in children, conduct disorders of children, and diabetes mellitus in children. The number of students attending these and other classes was larger than in previous years as evidence of the educational value of the Out-Patient Department for post-graduate teaching.

Respectfully submitted,

ERNST ROSENFELD,

Chairman, Committee on Out-Patient Department.

REPORT OF COMMITTEE ON LABORATORIES

It has always been felt by a number of physicians that the full-time laboratory man, not being essentially a clinician, is prone to follow up problems of a more or less academic nature, and, for this reason, is liable to neglect some of the issues in which the clinician may be primarily interested. This inherent weakness of the full-time system has been balanced against the accuracy of the diagnostic service rendered and the high level of intense concentration on scientific problems.

In instituting the full-time laboratory system in this Hospital it was felt that, even at the risk of this incomplete liaison, it was desirable to have a group of specialists who were likely to follow the leading advances of the times because of their special interest in their own fields. There were benefits in being able to obtain excellence in diagnostic service and authoritative opinions on scientific problems relating to the laboratory.

From the beginning, however, the full-time men have been making a deliberate and consistent effort to fit themselves into the hospital group in such a manner as to supply to the clinician the very type of cooperation he has been seeking. This desirable objective has been achieved in a large measure. The several departments in the laboratory have undertaken an active collaboration on problems starting essentially in the clinic, and it is being realized today that with the proper spirit and desire for cooperation, it is quite possible to develop a laboratory organization which, while maintaining its own identity, lends itself wholeheartedly to the clinical services in order to further jointly the latter's more important problems.

As examples of these cooperative investigations there may be mentioned the extensive studies on liver function carried on between the laboratories and one of the medical services, the physiological, bacteriological and semiological studies on diseases of the gastro-intestinal tract, the observations on pathological and physiological alterations in the various female sex hormones and the investigations on diseases of the lungs in their anatomical, bacteriological, experimental, radiological and clinical aspects. In this connection one must gratefully acknowledge the generous assistance of the Hofheimer Foundation which made it possible to effect further developments in the studies of the relation of anaerobic bacteria to lung infections.

The researches on cardio-vascular diseases, continued under a grant generously donated by the Littauer Foundation, have yielded interesting and valuable information on a group of diseases which are responsible for greater morbidity and mortality than cancer and tuberculosis combined.

The year 1930 has seen the organization of the department of dermato-pathology. Active work is going on in this sphere and it is felt that there is ample justification for the efforts being made to encourage the development and growth of this newer division of surgical pathology.

During the autumn of the year the Hospital was honored by having its Director of Laboratories appointed Director of the Scientific Exhibit held in connection with the Annual Graduate Fortnight of the New York Academy of Medicine. This was an entirely new departure and required the closest cooperation of the entire laboratory staff of the Hospital. The large attendance during a period of two weeks (over 1,000 physicians visiting the exhibit daily) established this venture as a permanent annual feature. It is gratifying to know that the New York Academy of Medicine attributes much of the success of this Fortnight to the whole-hearted cooperation obtained from the several departments of The Mount Sinai Hospital Laboratories and to their scientific contributions.

The Clinical Pathological Conferences continue to hold their high place in the esteem of the Hospital staff as well as of visiting physicians. They continue to be well attended, and in this way the Blumenthal Auditorium continues to serve the medical profession at large.

Of the thirty-seven articles published during the course of the year, a number deal with various properties of the bacterial products concerned with the Shwartzman phenomenon and with investigations on the intimate nature of this phenomenon. Continued investigations on differential blood cultures have yielded valuable information on the nature of blood infections.

The Department of Chemistry has been productive scientifically, advances having been made in studies on purification of serum antibodies, on the distribution of lipoids in disease, on the relation of carbohydrate metabolism to ferment action and on various chemical functions of the liver. The latter has yielded

new tests to determine early evidence of liver damage. Other new quantitative chemical methods have been developed during the past year by this department. Finally, further observations on the chemical properties of certain drugs used in connection with Dr. Swick's work on Intravenous Urography have been carried on during the year.

A standardized method for studying cardiac material has been published in order to establish a base line for future studies on heart disease. This has had a favorable reception and it would seem that this method will be largely adopted throughout the country.

Publications on interesting pathological lesions in the Department of Ear Pathology, Skin Pathology and Eye Pathology, together with detailed reports on diseases of the kidney and liver have appeared. Interesting and valuable reports on metabolic disturbances in thrombo-angiitis, on diseases of the female sex apparatus, and on the rich material studied in the neuro-pathological and neurological departments have made this year a particularly active one.

Twenty-five articles are in the hands of publishers and will appear shortly. These deal with studies on fermentation of sugars, on the partition of lipoids in disease, on the metabolism of pneumococci, on the properties of sera in connection with the Shwartzman phenomenon, on the female sex hormone, on new findings in eye diseases and in neurological conditions, on tumors of the pleura and bladder, on inflammations and vascular diseases of the kidneys, on diseases of the middle ear, and on diseases of the heart.

Apart from this, approximately eighty problems covering a wide range of physiological, bacteriological and clinical interest are being actively pursued throughout the laboratories.

Aside from the Clinical Pathological Conferences, fifty-two lectures were delivered by representatives of the laboratories both here and abroad. Exhibitions were held in the New York Academy of Medicine and at the meeting of the American Medical Association in Detroit, where a prize was awarded for excellence in presentation and originality in study. The Hospital was honored by having a member of the laboratory organization invited to give a Harvey Lecture for the year.

As usual, a large number of visitors passed through the laboratories, serving as an encouragement and a stimulus to the staff. In spite of the fact that the lay staff has been reduced, the number of examinations carried out in the various departments shows a very appreciable increase. This has been made possible by the constant supervision by the department heads and the active co-operation of the lay staff.

Following is a list of the number of examinations carried on in the several laboratories during the year 1930 with a comparison of the number of examinations carried on during the year 1929:

	1930	1929
Bacteriology	17,997	16,579
Surgical Pathology	3,034	3,014
Morbid Anatomy (Autopsies)	506	531
Chemistry	7,930	6,873
Clinical Microscopy :		
Out-Patient Department	5,607	4,821
Private Pavilion	12,771	10,864
Semi-Private	1,282	955
Hematology	2,882	3,122

The high autopsy percentage of 79½ obtained during the year 1929 in ward patients has been exceeded, a new record of 81 per cent. having been established this year. Credit is due to members of the Administrative and Intern staffs who have made this possible.

Sixty-nine physicians have worked in the laboratories during the past year. Of these, 9 were paid staff members, 13 were holders of Fellowships or full-time research physicians. The majority of the remainder held other positions on the clinical services.

The following improvements in laboratory technique have been instituted during the past year:

1. Simplification in the extraction of urines from female sex hormone. The technique employed in these laboratories has been taught to representatives of various laboratories in the country and is now being widely used.

REPORT OF COMMITTEE ON LABORATORIES

2. Corper and Lowenstein culture methods for tuberculosis.
3. Kline micro-method for the diagnosis of syphilis.
4. Sabin four-hour method for sputum typing in pneumonia.
5. Simplification on anaerobic bacteriology.
6. Rapid streptococcus agglutination technique.
7. Simplification of micro-chemical determination of phosphorus.

The great need for economy during the past year has led to cutting down of the porter staff, elimination of emergency night chemist, the introduction of cheaper methods for feeding animals, for preparing media, for preparing absolute alcohol and for preparing fluids for the preservation of tissues. Furthermore, an attempt has been made to introduce the stock-keeper system in order to provide for closer inspection over the distribution of minor supplies in the laboratories. In short, with the emphasis laid on economy during the past year and the numerous labor-saving and time-saving procedures introduced, it is hoped that the coming year will show a very appreciable difference in the total expenditures. For this, no small credit will be due to the Chief Technician and his co-workers.

The attention of the Trustees is again called to the need for increased research endowment, our present funds being hopelessly inadequate for our requirements. There should be continually borne in mind, too, the plan of eventually erecting more suitable quarters for the laboratories. There is no doubt but that physical limitations are largely responsible for holding back promising work which could be carried on in connection with the clinical staff of our hospital.

Respectfully submitted,

GEORGE B. BERNHEIM,

Chairman, Committee on Laboratories.

REPORT OF THE COMMITTEE ON DIETETICS

The Dietary Department during the year of 1930 has used every effort to curtail expenditures without lowering the standard of quality and service. This economy is especially necessary during these troublesome financial times. By means of graphs it has compared consumption and costs of previous years, month by month. Citrus fruits at times were so high that the use of them was confined during that period to bare necessities. The fluctuation of prices during the entire year was enormous and these graphs helped considerably in ordering from an economic as well as a dietetic point of view.

In the item of butter alone approximately 5,000 pounds were saved. This was done by using a butter cutter enabling us to serve individual portions instead of distributing it in pounds.

A consolidation of various units has added considerably to the efficiency in the kitchens. Vegetables for the entire hospital are now being prepared in one place. This has helped the labor problem connected with the use of fresh vegetables in season, when they are cheaper than the canned and certainly healthier. The bakery has also been consolidated with very satisfactory results.

The Private Pavilion kitchen has been brought under the jurisdiction of Miss Wood, Supervising Dietitian, which has brought the entire culinary department under her supervision.

Added improvement in the ward service was effected by the purchase of new electrically heated food carts. These permit the food to remain at one temperature as long as desired. New colored dishes have been experimentally used in the surgical and neurological wards and also in the children's pavilion. This touch of color seems to have been much appreciated by the patients.

A number of minor structural changes have been made throughout the corridors and various refrigeration rooms, such as the dairy refrigerator and the vegetable room, adjacent to the main kitchen. These have helped to modernize our thirty-year-old kitchen to a great extent.

REPORT OF THE COMMITTEE ON DIETETICS

The Dietary Department will soon face the new problem of providing the dietary needs of semi-private patients. This will mean a re-arrangement of duties and new time study for the main kitchen which will supply the food.

Respectfully submitted,

GLADYS GUGGENHEIM STRAUS,

Chairman Committee on Dietetics.

REPORT OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:
Gentlemen:

The Mount Sinai Hospital School of Nursing rounded out the fiftieth year of its history in March, 1931. Because of this fact, it was decided that the report of this year should consist of a review of its activities and accomplishments since its organization in 1881. The chronological historical report prepared by the Superintendent of Nurses, presented in a souvenir program which was distributed at the Fiftieth Anniversary exercises on March 3rd, is appended in place of the regular annual report.

It is with deep regret that I report the resignations of Mr. Henry Calman and Mr. Eli Winkler. Both have served the institution for many years and on behalf of the Board I wish to express our sincere appreciation of their splendid services.

HUGO BLUMENTHAL,
*President of the Mount Sinai Hospital
School of Nursing.*

NAMES OF PRESIDENTS OF SCHOOL OF NURSING SINCE 1881

THE PRESENT SCHOOL OF NURSING OF THE MOUNT SINAI HOSPITAL

THE FIRST NURSES' HOME OF THE MOUNT SINAI HOSPITAL
SCHOOL OF NURSING SHOWING OUT-PATIENT DEPARTMENT
ON THE GROUND FLOOR

FIFTY YEARS' HISTORY OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

As early as 1878 the attention of a small group of ladies headed by Mrs. Alma DeLeon Hendricks, all deeply interested in the activities and welfare of The Mount Sinai Hospital, was drawn to the excellent work being done in Bellevue Hospital by the new type of nurse being trained there. This little group began to formulate plans for the development of a school for the training of nurses at The Mount Sinai Hospital.

The opposition to such a plan at that time by the Hospital authorities was so vigorous and determined that the project was necessarily dropped. Two years later, after the death of Mrs. Hendricks, practically the same group that had worked with her to establish a school for nurses renewed the struggle in memory of their lost leader, and in 1881 they obtained permission to undertake the experiment in connection with the wards for women patients.

1881

In February, 1881, plans for the school were perfected and the "Society of The Mount Sinai Training School for Nurses" was incorporated under separate management from that of the Hospital, with a Board of Trustees, all of whom were women. The personnel of this Board was:

PRESIDENT.....	MRS. FLORIAN H. FLORANCE
VICE-PRESIDENT.....	MRS. H. BATTMAN
TREASURER.....	MRS. FELIX SAMSON
	(Acting for Mrs. L. M. Hornthal absent in Europe)
SECRETARY.....	MRS. CHARLES HENDRICKS

DIRECTORS

MRS. LOUIS HAAS	MISS A. LIMBURGER
MISS HALL	MRS. SOLOMON LOEB
MRS. MAX HEIDELBACH	MRS. LEWIS MAY
MRS. EDWARD LAUTERBACH	MRS. FREDERICK NATHAN
	MRS. DAVID J. SELIGMAN

SUPERINTENDENT OF NURSES.....	MISS KATE RICH
MATRON.....	MISS DAVIS

The school was opened on the 11th day of March, 1881, with eight probationers, four graduate nurses and a superintendent of nurses, Miss Kate Rich, a graduate of the Bellevue Hospital Training School for Nurses. A Committee of Instruction was appointed, composed of two managers of the school, two members of the Medical Board of the Hospital and the Superintendent of Nurses. A regular course of lectures was established and was given by prominent physicians and surgeons. Practical bedside nursing was taught by the Superintendent of Nurses.

1883

The first home of the Training School was a rented house at 850 Lexington Avenue. Later, as the school increased in size, two houses were purchased to accommodate the rapidly increasing student group. In this year, Miss Rich resigned. The work which she had accomplished was so much appreciated that the Medical Board voted to give her a medal in recognition of her devoted efforts for the welfare of the school.

The first class of students was graduated in 1883. The first school pin was identical in design with the one used at the present time but was twice as large and was made of silver instead of gold.

In this year exclusive American rights were secured to protect the gingham material from which the nurses' uniforms have always been made. The original uniform consisted of a high necked dress with stiff collar and cuffs, worn with a white apron, and a cap similar to that worn by our graduates at the present time.

1884

In recognition of the excellent work of the School of Nursing, the Board of Trustees of the Hospital requested the Board of Directors of the Training School to take over the nursing of the male patients in the hospital in addition to that of the female patients.

1885

After two or three short-term appointments Miss Anna L. Alston was appointed to fill the position of Superintendent of Nurses left vacant by Miss Rich's resignation.

1886

Mrs. David Seligman was elected President of the Training School Board, serving in that capacity until 1894.

1890

In this year the kerchief, which is still worn by student nurses as a regulation part of their uniform, was adopted. It was in this year also that the school pin was changed from silver to gold and reduced in size.

1895

It was voted in this year that the best interests of the Hospital and School of Nursing would be served by having a closer relationship between the two organizations, and by having the Hospital assume more direct charge of the school than had previously been the case. Accordingly, a new Board of Directors was appointed, twelve in number. It was voted that seven of these members should always be selected from the Hospital Board and that five others might be non-members. A cooperating committee of three medical men was added. The separate incorporation of the Training School for Nurses was retained. At the time this change was made there were sixty student nurses in training.

From the earliest days in its history, the school authorities have always carefully safeguarded the interests and activities of the graduate nurse group. One of the first steps toward their protection was the establishment of a Registry for Graduates of our own school and the ruling that the Hospital would make itself responsible for the payment of these nurses on special duty in the Private Pavilion and elsewhere in the Hospital.

It was during this year that Mrs. Marion F. Dean was appointed Superintendent of Nurses in place of Miss M. Leary, who had succeeded Miss. Anna L. Alston in 1894.

1896

A severe epidemic of typhoid fever broke out in the school toward the end of this year.

1897

At the suggestion of Dr. Alfred Meyer the practice of protecting students against typhoid fever by inoculation was established and has since that time been constantly maintained.

Mr. George Blumenthal was elected President of the Training School Board.

1898

It is interesting to note that up to this time the total class instruction ranged from fifty to sixty hours during the entire two-

REPORT OF SCHOOL OF NURSING

year period of training. During the year, however, class instruction was increased to one hundred sixty-eight hours and greatly improved.

1900

Mr. Kalman Haas became President of the School of Nursing, succeeding Mr. George Blumenthal.

1904

This was a most important year in the history of the School. Together with all other Hospital departments it was moved from Lexington Avenue to the newly erected group of buildings at Fifth Avenue and 100th Street and overnight the Hospital was changed from a 200-bed to a 450-bed unit. At this time the school numbered eighty-five students and ten probationers.

It was during this year that Dr. S. S. Goldwater became Superintendent of The Mount Sinai Hospital; he continued to serve in that capacity until 1929.

1905

Mrs. Marion F. Dean, Superintendent of Nurses, resigned her position and was succeeded by Miss Anne D. Van Kirk.

The school was registered in this year with the Board of Regents of the University of the State of New York.

In this year we find the first evidence of a systematically planned curriculum with properly arranged lecture courses. This was the first result of the registration of the school with the New York State Board of Regents.

Mr. Murry Guggenheim established our first scholarship fund with a gift of \$20,000.00, the interest to be used to provide annual scholarships of \$100.00 each to the twelve students showing the greatest aptitude and ability in class work and bedside nursing.

The Alumnae Association was formally incorporated. Between 1881 and 1905 the school had graduated four hundred eighty-five nurses.

1906

The Constitution and By-Laws of the Alumnae Association was amended to include the development of a pension fund founded by a generous gift from Mr. Murry Guggenheim. Through the interest and constant support of the Board and its

friends, this fund has grown until it has reached the substantial sum of over \$200,000.00. The late Mrs. George Blumenthal was one of its most interested and generous supporters.

Mr. Albert W. Scholle, President of the Training School Board, announced the founding of the Lillie Stern Scholle Pleasure Fund of \$2,500.00, the interest of which was to be drawn on for social affairs in connection with the school. Mr. Scholle added to this fund subsequently and at the time of his death in 1917 it amounted to \$9,000.00.

1908

A dietetic classroom was opened in this year containing individual equipment for eight student nurses and also a special diet kitchen for patients and a milk room for preparation of formulas for infant feeding

1910

The Training School became affiliated with the Federation for the Support of Jewish Philanthropic Institutions.

1912

It was in this year that Mr. Hugo Blumenthal became a member of the Training School Board. Mr. Albert W. Scholle was elected as President of the Training School Board, succeeding Mr. Kalman Haas, who had served as President for twelve years.

Miss Anne D. Van Kirk resigned her position as head of the school because of ill health; Miss Rye Morley was appointed as her successor.

1913

The first attempt at a separate classroom as a nursing laboratory or for practical nursing demonstrations was made. The Ladies' Auxiliary kindly consented to allow two beds and a small amount of other necessary equipment to be installed in their large meeting and sewing room. This room was available for class instruction five days in each week.

1914

With the summer months of 1914 came the beginning of the World War, into which we were later drawn.

In July, 1914, Miss Rye Morley resigned as head of the Training School and in October, Miss Elizabeth A. Greener, the present head of the School of Nursing, was appointed to succeed her.

REPORT OF SCHOOL OF NURSING

At this time the curriculum of the school as reported to the Board of Regents included two hundred sixty-eight hours of classroom instruction and practice.

Late in the year the Hospital started work on a group of new buildings on Fifth Avenue between 99th and 100th Streets. This construction was completed in 1922.

1915

For the first time in the history of the school two full-time nursing instructors were appointed, Miss Margaret Kerrins as practical instructor and Miss Amy Trench as instructor in the sciences.

1916

The Mount Sinai Base Hospital, Unit No. 3, was organized. The unit was called for service on February 6th, 1918, and two days later sailed for France on the S.S. Lapland, with Miss Amy Trench as chief nurse of the unit and Mrs. Helen Lees as assistant. The nursing group of the unit consisted of a group of sixty-five nurses. Four women secretaries also accompanied the group.

1917

Early in the year Mr. Albert W. Scholle, at that time President of the Training School Board, resigned on account of ill health and Mr. Hugo Blumenthal was elected as his successor with Mr. Charles A. Wimpfheimer as Vice-President. On the occasion of our Fiftieth Anniversary these two valuable officials continue to hold the same positions.

A request was received from Washington that the Hospital undertake the training of volunteer nursing aids to be sent abroad later if necessary. The course was instituted and successfully conducted for over a year during which time many splendid women of the best social type enrolled. By their unselfishness and devoted work they won the respect and regard of all with whom they came in contact.

During this year Mr. Blumenthal announced the establishment of the Estelle and Hugo Blumenthal Scholarship of \$35,000.00, part of the income to be used to maintain a \$500.00 scholarship awarded annually to the student in each graduating class showing

the greatest aptitude and fitness for advancement in her profession, and part to provide a gift of \$25.00 to each student nurse who successfully completed her three-year period of training.

In October over one hundred student representatives of the School of Nursing in full uniform, headed by the officials of the School of Nursing took part in a great Red Cross patriotic nursing parade from 78th Street down Fifth Avenue to the Washington Arch. Forty-five members of The Mount Sinai Base Hospital, Unit No. 3, in full service regalia also marched, headed by the Chief Nurse, Miss Amy Trench, and her assistant, Mrs. Helen Lees. The object of this parade was to stimulate recruiting for the nursing field, as, because of war conditions, great difficulty was being experienced in maintaining the work of hospitals and schools of nursing and of upholding standards.

1918

In September of this year fifty-eight probationary students enrolled for admission, among whom were thirty-six members of the Vassar Training Camp for college graduates who had responded to the call of the country for more young women to be trained as nurses.

On September 26th, the influenza epidemic broke out in the Hospital and School and the next two months were spent in a desperate fight with this grim disease which played greater havoc with nurses than with any other group. Eighty-five students contracted influenza and sixteen of that number developed pneumonia. Three students and two graduate nurses died. At one time there were forty-two nurses off duty ill. The morale, spirit and courage shown during this crisis by both graduates and students in our school is a thing never to be forgotten by those who worked with them.

A memorial was established for the school by Mr. Charles A. Wimpfheimer, named for a son whose life was given in his country's service, the Jacques D. Wimpfheimer Memorial Fund. This fund is used for loans to student nurses requiring temporary financial assistance.

On November 11th the Armistice was declared and most joyfully celebrated.

1919

Early in this year our hearts were made glad by the safe return of the Base Hospital Unit after two years of service abroad.

REPORT OF SCHOOL OF NURSING

Two beautiful bronze tablets were erected, one in the Hospital, the other in the Nurses' Home, in honor and recognition of the splendid service the physicians, nurses and others connected with this unit so loyally rendered during the war.

Following the death of Mr. Albert W. Scholle, former president of the Board of the School of Nursing, the Albert W. Scholle Memorial Fund of \$50,000.00 was founded by William and Frederic Scholle as a tribute to the memory of their father to be used for the physical and recreational needs of the School of Nursing.

In this year the building formerly used as the Pathological Laboratory was converted into a model school unit to provide for the constantly increasing educational program of the school. This was the first complete building, devoted solely to nursing educational purposes, organized in connection with any school of nursing in this country. For the first time in its history our school had adequate and well-arranged classrooms, laboratories, nursing demonstration room, and offices for instructors.

The old Private Pavilion, vacated the same year because of the completion and occupancy of the new one, was temporarily converted into an annex of the Nurses' Home to provide for the rapidly increasing nursing staff until other and more suitable arrangements could be made.

1923

In this year the name of the school was officially changed from The Mount Sinai Hospital Training School for Nurses to The Mount Sinai Hospital School of Nursing.

1924

The Berolzheimer Memorial Fund of \$20,000.00 was established in this year by Mrs. Emma Berolzheimer in memory of her husband, for many years the treasurer of the Board of the School of Nursing. The income of this fund is used for special advanced nursing educational purposes or for the higher education of student nurses.

1927

For over ten years many plans for the enlargement and improvement of the Nurses' Home were discussed and considered. The satisfactory development of these plans was delayed by the

SCIENCE LABORATORY—SCHOOL OF NURSING

OPEN AIR ROOF—CHILDREN'S PAVILION

war. After a number of years when further studies of the nursing needs of the Hospital were resumed the Board decided to abandon earlier plans for the extension of the original home as inadequate and to erect an entirely new school and dormitory building on a more suitable site. The purchase by the Hospital of seven lots on 98th Street between Fifth and Madison Avenues solved the problem of a site and the greater part of 1925 was devoted to the preparation of plans for the new building. Late in the summer of 1927 a beautiful, 16-story building, a model in every way of the best type for such a purpose was completed. This building is a monument to the judgment, interest and knowledge displayed by those responsible for its planning and development. Too much credit cannot be given to the architects, to the Building Committee of the Hospital and to Dr. S. S. Goldwater, at that time Director of the Hospital, whose keen understanding of the educational and social needs of such an organization as ours brought about its successful accomplishment as a whole. On September 6th of that year the school had the joy of moving into this new home which is most adequately meeting its needs in every way.

1931

On January 1st of this year the census of the school was three hundred thirty-eight students and seventy-six graduates, a total nursing group of four hundred fourteen.

The curriculum of the school has been improved—increased and strengthened in every possible way. Over nine hundred hours of regular classroom and laboratory instruction are now given to each student. A number of elective services each carrying from twenty to fifty hours of extra instruction supplements the regular course.

Over 3,500 letters were received during the year applying for information or admission. One hundred fifty student nurses were selected from this group for admission.

Approximately two thousand nurses have been graduated since the day in 1881 when eight young probationers were enrolled as the nucleus of the school. Nearly four hundred of these graduates are doing private duty nursing in this city and more than two hundred others are engaged in executive, post-graduate, or public health work.

To write the complete history of the School of Nursing would be to write a large volume. Fifty years of attainment have been

REPORT OF SCHOOL OF NURSING

condensed into a few pages but in that fifty years the growth of the school has surely exceeded even the fondest hopes of its founders.

The success of the school and its graduates must largely be attributed to two main factors—first, the fine courage, the unselfishness, patience and devotion to ideals which characterized that little band of pioneer nurses who laid the splendid foundation of tradition and standard on which our School was built; second, the marvelous spirit, vision, understanding and noble support given at all times and under all conditions by that splendid body who with understanding heart and mind has stood always behind the Hospital and its activities—the Board of Trustees of the Hospital and the Directors of the School of Nursing.

ELIZABETH A. GREENER,
*Superintendent of Nurses and Principal
of the School of Nursing*

SPECIAL FUNDS OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

Albert W. Scholle Memorial Fund	\$40,000.00
Founded by William and Frederic Scholle as a tribute to the memory of their father, to provide a vacation and recreation fund for Mount Sinai Hospital student nurses.	
Estelle and Hugo Blumenthal Scholarship and Graduation Fund	35,000.00
Founded by Estelle and Hugo Blumenthal to provide an annual scholarship to the student of the graduating class chosen for special fitness to advance in the profession of nursing by taking a Post Graduate course at Columbia University. This fund also provides a prize of \$25.00 to each graduating student.	
Emil Berolzheimer Memorial Fund	20,000.00
Founded by Mrs. Emil Berolzheimer in memory of her husband, Emil Berolzheimer; the income to be used for higher education of students.	
Murry Guggenheim Scholarship Fund	20,000.00
Established in 1905 by Murry Guggenheim; income to provide annually twelve scholarship awards of \$100.00 each to students who have shown exceptional ability during the year.	
Jacques D. Wimpfheimer Memorial Fund	10,000.00
Founded by Charles A. Wimpfheimer in memory of his son, Jacques D. Wimpfheimer. Any student requiring financial assistance during training may call upon this fund.	
Charles A. Wimpfheimer Emergency Relief Fund	2,500.00
Established by Mr. Charles A. Wimpfheimer; income and, if necessary, principal not to exceed \$100.00 in any one year to be used for the relief of members of the Alumnae Association.	
Lillie Stern Scholle Pleasure Fund	9,000.00
Founded by Albert W. Scholle; the income to be used largely to defray the expenses of parties, dances and social gatherings of the students.	
Sick Nurses Fund	5,000.00
Established by Directors of the School and the Trustees of the Hospital and contributed to by them from time to time; income and principal to be used to defray the expenses of graduate nurses and students of the school while sick and not confined in Mount Sinai Hospital.	
Mr. and Mrs. Sam S. Steiner Fund	5,000.00
Founded by Mr. and Mrs. Sam S. Steiner in memory of their beloved son, William J. H. Steiner; the income to be used for the relief of needy graduate nurses of the School.	

SPECIAL FUNDS OF THE MOUNT SINAI HOSPITAL SCHOOL OF NURSING

(Continued)

Carrie M. and Gustav Blumenthal Graduating Class Prize Fund	\$5,000.00
Established by provision in the will of Gustav Blumenthal; income to be distributed annually as a prize or prizes among the graduating class in such manner as the Directors may from time to time deem advisable.	
Kalman and Harriet F. Haas Fund	3,000.00
Founded by Kalman Haas; the income to be used for the general purposes of the School.	
Solomon and Betty Loeb Fund	3,000.00
Founded by Solomon Loeb; income to provide annual prizes to students.	
Carrie Untermeyer Fund	2,600.00
Founded by Mrs. Carrie Untermeyer. To establish an award of \$100.00 annually to the student graduating who has the best record for kindness and proficiency in actual bedside nursing.	
Educational Fund	2,500.00
Founded by Mrs. Berthold Levi in memory of Berthold Levi; the income to be used for higher education of students.	
Mr. and Mrs. Morris Fatman Relief Fund for Graduate Nurses	2,500.00
Founded by Mr. and Mrs. Morris Fatman; income to be used for the relief of graduate nurses.	
Eugene Meyer, Jr. Library Fund	2,000.00
Founded by Eugene Meyer, Jr.; the income to be used to supply books and magazines for the school library.	
Amy C. and Fred H. Greenebaum Fund	2,000.00
Established by Mr. and Mrs. Fred H. Greenebaum; income to be used for an annual award to the most deserving student nurse in any class.	
Isabella Freedman Fund	1,500.00
Established by Mrs. Isabella Freedman; the income to be used for one or two awards to students in the graduating class who have shown marked ability, proficiency and interest in their work.	
Daniel Kops Prize Fund	1,000.00
Founded by Employees of the House of Kops in memory of Daniel Kops; the income to be applied to the awarding of a prize to the nurse who holds the best record for bedside nursing and kindness to patients.	
Emma H. Kaskel Fund	1,000.00
Founded by Mrs. Emma H. Kaskel; income to be used to supply magazines for the school library.	
Pension Fund of the Mount Sinai Alumnae Association	204,000.00
Established to provide pensions to nurses after many years of service.

MR. HAROLD E. LOWE	RECREATIONAL WORKER

REPORT OF THE SOCIAL SERVICE DEPARTMENT

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:
Gentlemen:

During the past year we have extended the work of the department several ways. In order to fill an urgent need for more adequately trained workers, Mrs. Elsa Butler Grove was engaged as Staff Educator, and Miss Frieda Berman as Case Adviser; Miss Ethel Weinstein was added to the staff as a full-time worker in the Radiotherapy Department.

Although the Federation for the Support of Jewish Philanthropic Societies was obliged to reduce our allowance, we were enabled to carry on this extra work, as well as to meet the heavier expenses brought about by the general economic depression, through special donations given for this purpose. We are very appreciative of the funds allotted to us by Federation with whom we have co-operated to the best of our abilities. Several members of our Board have worked on committees of the Women's Division of Federation.

A new division of cases was adopted in 1930, and the schedule devised by the Records Committee of the North Atlantic District of the American Association of Hospital Social Workers, in co-operation with Dr. Ralph G. Hurlin, Director of the Statistical Department of the Russell Sage Foundation, is being used. This form divides our cases into three categories:

1. **FULL STUDY AND TREATMENT.** Cases presenting complicated problems which are accepted for full case work study and treatment. Such study and treatment can only be given if the case is retained for some time and the number of these cases is therefore small.
2. **LIMITED SERVICE.** Cases accepted for limited service to facilitate medical diagnosis or treatment or to effect a social adjustment. This class includes the numerous cases which present simple, uncomplicated problems of such a nature as not to require intensive study and treatment. It also includes cases which though presenting more complicated problems are accepted only for emergency service of short duration.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

3. SUPERVISION COROLLARY TO MEDICAL TREATMENT. Cases registered in clinics for which the social workers accept responsibility for a special type of continuing supervisory care. The workers' concern is primarily to supervise the carrying out of the Medical Plan of Treatment and to maintain in the patients understanding of and participation in this plan.

Our statistics indicate a considerable increase in the volume of work accomplished; the following figures are significant:

16,983 more consultations were made within the Hospital; the number of visits made outside of the Hospital increased by 1,946. 756 more patients were referred to other organizations during the year. As indications of the general employment situation, it may be noted that in the past year 1,604 patients were referred for employment of whom 207 were placed, while in 1929, 470 patients were referred for employment and 378 were placed. Of the 1,976 patients referred for convalescent care (21 more than the previous year), all but 341 were placed, although one of our most important convalescent homes had been destroyed by fire.

4,648 reports were sent to social agencies at their request for information concerning clients. Although it takes a great deal of time to collect and interpret intelligently the information requested, we are glad to render this service to community organizations.

The workers spent, during the year, 7,753 hours in clinic administration which means that each worker devoted about one month of her time to this activity. We hope that when we have a new Out-Patient Department a good deal of purely administrative work which our workers now perform will be taken over by the Out-Patient Department personnel, thus giving us more time for social case work.

After several weeks of observation of the work of the Children's Division, the Staff Educator, under the direction of Mrs. Fanny Lissauer Mendelsohn, worked out a tentative plan for staff education. On October 1, 1930, she assumed her duties on a part-time basis.

Originally the idea which lay back of this project was to meet the difficulty of finding adequately trained workers to fill vacancies on the staff. But the winter of 1930-1931 was unusual in that there was little movement of personnel in social work, there

REPORT OF THE SOCIAL SERVICE DEPARTMENT

being but one vacancy to fill between September, 1930 and January 1, 1931. Hence this winter's teaching program was necessarily adapted to the development of selected members of recent appointment.

The plan followed has been to give a weekly individual conference of an hour and a half's duration to the five staff members chosen for the experiment from Children's, Tuberculosis and Radiotherapy Departments, as well as one group conference of one and a half hours per week. The aim of the individual conference is to tap the conditions peculiar to the social service rendered by each worker, to develop a sense of case work technique suitable to these conditions, and to record the case work processes in a way that will be applicable for the general rule of cases carried by each worker.

In the group conference, it was felt at the outset that regular class-room atmosphere might be desirable, and a few sociological concepts bearing on case work thinking were presented by lecture method. However, because of the differences in experience and training of the workers and because of the differences in the very nature of each worker's case load, this method, in the estimation of the Educator, proved too formal and too remote. A better solution, it was thought, was to spot common needs (such as planning for care of dependent children) and by discussion of concrete cases to arrive at general conclusions regarding case work with dependent children of sick parents or case work with sick children of parents with limited resources. Other topics to be developed include "Interviews," and "Knowledge and Functions of Certain Social Agencies in the Community."

To report on a project which has been functioning for approximately twelve weeks and in which only five workers have shared is hazardous. Perhaps to date all that has been accomplished for the workers is a feeling of sharing in one another's work and point of view, and a quickening of interest of each worker in the social challenge of her clinic.

Since October, the weekly staff conference, which all workers attend, has been largely devoted to case work discussion under the guidance of the Staff Educator. A worker is delegated to present a case upon which she confers with the Educator in advance of presentation, for the purpose of ascertaining that the

REPORT OF THE SOCIAL SERVICE DEPARTMENT

case has been worked up both medically and socially. After the worker has outlined the situation, a free discussion by the staff ensues. Out of all discussions has come a feeling of knowing one another's minds and responsibilities better, a frankness in facing imperfections in our case work has resulted, and an enthusiasm to forge ahead in trying to attain perfection in our performance.

For several years we have been aware of the need of more adequate case supervision, and in the fall of 1930 one of the staff members was selected to act as Case Adviser. She was made responsible for the case work and record keeping of the workers in the Adult Out-Patient Department (with the exception of the Mental Health Class) and the Children's Department (excluding Children's Health Class), the case work of the remaining staff continuing under the supervision of the Assistant Director.

The Case Adviser has been devoting the first months to systematizing record keeping. A helpful innovation is the system of a permanent central card file in the main Social Service office to which all workers may refer. On these cards, services on limited and supervision cases are recorded. While this may not be the most efficient way of recording these services, it is a more definite and uniform method than any previously used. The intensive case record is now being studied and it is hoped that within a short time we shall be able to work out a better process of recording.

The coordination of social case work within the department is another function of the Case Adviser. Because there is no central medical record system, work is frequently duplicated when a patient attends more than one clinic or has been treated both in the Hospital and Out-Patient Department. In an effort to minimize such duplication, an inter-departmental refer slip has been put into use resulting in more frequent inter-departmental conferences.

The Case Adviser is in touch with all active cases and no case can be closed without her approval. She is also consulted about referrals to cooperating agencies, and she attends as many conferences with workers of outside social agencies as is possible.

The outstanding social service problem on the adult wards is the need of adequate facilities for the care of chronic cases. A

particularly difficult problem arises where Western climate for indefinite periods is recommended to patients on the medical wards, because most of these patients have no funds and have family obligations. However, we have succeeded in sending four patients to Western states.

Procuring prolonged convalescent care for certain types of cases, such as thyroid disease, lung abscess and post-pneumonia, still remains difficult as the usual period of convalescence, from two to four weeks, is not sufficient. Convalescent care for Porto Ricans continues to present a problem since it is impossible to care for them in their overcrowded homes.

Frequently patients are discharged from the wards who are no longer suitable cases for an acute hospital, but who are not eligible for convalescent homes because they are still in need of dressings and treatment. Such patients find the visits to the Out-Patient Department trying, and there is need for a place to bridge the gap between the Hospital and the convalescent home.

During the past year the workers in the Children's Social Service Department took 1,963 social histories on children who were admitted to the wards and clinics for treatment.

The Pediatric Clinics show a constantly increasing attendance and with the changing community and its variety of racial standards new problems develop. The Porto Rican problem here, too, is a difficult one. Because of their language handicap and their ignorance of health rules and medical treatment, it is necessary for the clinic staff to spend a great deal of time with this group. Contacts with some of the Spanish speaking organizations are helping us to a clearer understanding of the particular needs of the Porto Rican children. However, an interpreter would be of great value in our work.

Practically all convalescent homes require that children's teeth be in good condition before they are admitted for convalescent care, but because we have found some difficulty in promptly procuring the necessary dental work delays have occasionally occurred in securing convalescent care. The ideal procedure would be to have the children's teeth attended to while they are in the wards so that such delay might be avoided. We find that there is a need of more adequate facilities for dental care for children as well as adults.

Children suffering from the milder forms of epilepsy continue to be referred by the doctors for convalescent care and summer camps in spite of the fact that we have been unable to place them. It is felt that the responsibility for their safety is too great to be assumed by the convalescent home or by the Social Service Department.

A special fund made it possible for us to maintain two subscription beds at the Speedwell Society for the benefit of those hospital patients for whom prolonged convalescent care was indicated. During the past six months six children were sent away for periods of from three to twenty-one weeks.

The diabetic children are given special attention. The school is visited for the purpose of acquainting the teacher with the child's condition so that she may be able to cooperate intelligently. Particular emphasis is placed on the child's health habits at home. During the summer a group of six diabetic children were sent to a camp, and although special plans and preparations were made and a dietitian secured, it was impossible to fit these children into a group of normal children. Their presence at the camp created so many problems that it was necessary to return them home within a few days.

In the Children's Asthma Clinic approximately 75 children were treated for hay fever alone, each of these children requiring intensive follow-up supervision by the social worker. 44 children were sent to the country. The group of 13 children who were on a farm at Milford, Connecticut, are of particular interest and warrant special mention. Some of these children had been on the farm during the previous summer, and the group as a whole showed marked improvement in general health while in the country, improvement in the majority of cases continuing. Two children who were unable to attend school previously and were tutored at home, as a result of their vacations were able to resume their studies and are now attending school regularly. It is surprising to note their marked relief from asthmatic symptoms even during a time of the year when they usually suffer most. The results were so striking that Dr. M. Murray Peshkin wrote a scientific paper on the subject basing his report primarily on the work performed by the Social Service Department.

During the latter part of the year, the Eczema Clinic was combined with the Children's Asthma Clinic, both forming one

division to which, however, an extra session has been added. Prior to this merger, there was no social service worker to look after the eczema cases.

For the past six months the Therapeutic Kindergarten in connection with the Children's Health Class has been under the supervision of a young woman who had herself been a patient in the class. She prepared herself for the work by taking courses at Hunter College and New York University and by serving voluntarily as an assistant to her predecessor as well as to the Kindergarten on the roof of the Children's Pavilion. Although small of stature, she has demonstrated that she can command respect from those with whom she comes in contact and keep the children happy and content. In addition to the Kindergarten she is in charge of the waiting room during clinic hours on Wednesdays.

As part of the recreational program of the Children's Health Class, the Boys' Club, meeting once a week, was organized. The group is small, thus enabling the leader to give the boys individual attention. The activities consist of both indoor and outdoor sports, the latter being the greater favorite. The indoor work was made possible through the cooperation of Union Settlement in placing a room at our disposal. As this type of recreational work is considered important, it is hoped that a similar club for girls can be established.

The case load in the Children's Cardiac Clinic shows a decrease of approximately twenty-five per cent due to the fact that the group of cardiac suspects which formerly were included in the case load have been eliminated.

In order to enable the children to attend the clinic without interfering with school attendance and also to enable the social workers to give more time to social case work, the clinic which formerly was held on two afternoons during the week now meets on Saturday mornings only. However, we have found that one clinic session a week is not adequate, and as soon as space and facilities permit we shall return to the old schedule of two clinic sessions weekly.

Dr. Irving R. Roth's special study was continued with renewed impetus. Out of a total group of 961 cases known to the clinic since it was organized, 466 were traced, and of these 312 were

brought to the clinic for examinations. A special follow-up clinic for these cases was held on Tuesday mornings, as well as an evening clinic once a month for those who could not return during the day. Our social workers volunteered their services for the evening clinics. The records of the study group are now in the hands of the Research Committee of the New York Tuberculosis and Health Association. Tabulation will begin shortly and it will no doubt take several months to complete the study.

Providing convalescent care for cardiac children presented a greater problem this year than heretofore because we were deprived of the facilities of Irvington House. Many children who formerly were sent away received such convalescent care as could be arranged in their own homes under the close supervision of the social workers.

Our summer activities were carried on much along the same lines as the previous year. Of the 796 children sent to the country for summer vacations, 536 went to free camps and 260 to pay camps. 53 mothers with their children received country care for limited periods.

In the Adult Cardiac Clinic it has become increasingly difficult to secure convalescent care for patients. In 1930 only seventy-one per cent. of the applications made were accepted while in 1929, ninety per cent. were provided with convalescent care. Even though it is apparent that patients in group IIB (patients able to carry on only greatly diminished activity) seem to derive the most benefit from convalescent care, it is a problem to procure such care for them. Where, however, convalescent care is obtainable, the patients frequently show such marked improvement that it is possible to change their functional classification from IIB to IIA (patients able to carry on only slightly diminished activity).

The major problem in the Orthopedic Clinic is to supply appliances either through the Social Service Department or through payment by the patient himself. 200 more cases were referred for appliances than the previous year. For these patients, because of present economic conditions, a larger number of appliances had to be secured through the Social Service Department. The Corrective Exercise Class was reorganized last year and is held every Monday in the Heckscher Foundation gymnasium.

The function of the social worker in the Thrombo-Angiitis Obliterans Clinic continues unchanged. The industrial placement of patients in this clinic, which is always difficult, proved much more so this year because of the general employment situation. There is an outstanding need for more sheltered work-shop facilities which would assist us in the social treatment of these patients.

In the Tuberculosis Clinic there was an increase of 209 new admissions. The economic depression has forced those patients, who formerly were cared for at home, to seek shelter in institutions and although hospital facilities have increased to some extent during the year, they have not kept pace with the demands. Free convalescent care for inactive tuberculosis cases is still difficult to obtain even though it is important in that it may prevent a breakdown or recurrence of activity.

During the latter part of the year the Luetic Department adopted a policy of closing the records of patients who, despite repeated attempts at follow-up, have been absent for more than three months. This policy will result in cutting down the case load to an appreciable degree, and eliminating much of the clerical work. Owing to the absence of one of the social workers for a period of two and one-half months, there was a decrease of about 200 home visits during the year.

As all patients in the Radiotherapy Department are referred from some other division in the Hospital or Out-Patient Department, much time is necessarily spent in correlating the different services which have been rendered and collecting the social data which have been gathered by other social workers. Many old patients who had not been to the clinic since 1926 were visited with the result that approximately twenty-one per cent. of them returned. In the future, the social worker will be able to check up immediately on return visits in order to cut down on the number of patients who fail to report back for treatment or re-examination.

The doctors are very eager to treat early cases of malignancy and early recurrences, as many of these cases present the best prognosis and possibility for cure. In our attempt to assist early and arrested cases, we are hampered by lack of facilities for convalescent care, as few convalescent homes will admit patients with a diagnosis of cancer even in the early or arrested stage.

The advanced cases present different problems. Although the work is not constructive as far as the rehabilitation of the patient is concerned, much can be done to make the patients' lives more comfortable and to give the families a better understanding of the patients' situation. In this group, hospitalization is often desirable but the lack of beds for chronics and incurables makes it difficult to have patients admitted to hospitals.

A decrease in the social service case load of the Mental Health Class is noted. One of the causes may be attributed to the change in the medical staff which temporarily tended to interrupt the treatment of a number of patients. The decrease made it possible for the workers to do more intensive case work. This is in accordance with the general aim in psychiatric social work, namely the desirability of intensive work on a few cases rather than superficial work on many.

Of great value to the general scheme of mental hygiene and therefore to this Clinic would be the advantages of:

1. A vocational adjustment bureau for boys and men modelled along the lines of the Vocational Adjustment Bureau for Girls and Women.

This need, which has long been apparent, and which, we understand, has been repeatedly considered by the New York City Committee for Mental Hygiene, is brought home with additional force because of the increasing difficulty in placing psychiatric cases during the present period of unemployment. However, in this clinic we have not found an increase in cases of mental disorders due to the prevailing economic depression, which would tend to corroborate the opinion of many psychiatrists that economic stress per se without the reenforcement of intrapsychic conflicts rarely causes major mental disturbances.

2. Facilities for the care of patients who cannot remain at home and for whom institutional care is not advisable for various reasons.

This, too, has been repeatedly advocated both by state and private agencies, but up to the present time no steps have been taken toward the actual initiation of such service.

It is felt that regular staff conferences between social workers and psychiatrists in the Mental Health Class would be of benefit

to the workers, and it is hoped that such a plan can be carried out during the coming year.

The club which is part of the Mental Health Class program, meeting weekly at the Henry Meinhard Memorial Health Center, has proved its value therapeutically. The attendance was never less than 45 and often more than 60. Basketball, dancing, checkers, and card games are popular diversions, and refreshments add to the gaiety of these occasions. Through the kindness of the Hebrew Orphan Asylum, an entertainment was given in their auditorium, and monthly picnics were held on the grounds at Edenwald (which is part of the Hebrew Orphan Asylum) during the summer months.

During the year 51 patients attended the Occupational Therapy Class. In addition to the patients referred from the Mental Health Class, the Occupational Therapist works with ward cases whenever prescribed by the neurologists or psychiatrists.

The Metabolism Clinic shows an increase of 80 new patients. Unfortunately, convalescent care for the diabetic is still practically an impossibility.

In the medical clinics there has been a greater demand for social service in regard to employment adjustment and material assistance. It is apparent that many patients, who in normal times would not find it necessary to come to us, attend the general medical clinics because of minor medical complaints. It has been found that requests for medical treatment are frequently made in the hope that adjustments of employment difficulties will be effected.

During the year two medical follow-up clinics were added to the number already organized. In March the Ear, Nose and Throat Follow-Up Clinic was established, and in April another follow-up clinic of the First Medical Service was started. There are now 13 follow-up clinics held regularly. The secretarial staff was increased by two full-time workers.

During the year, 16,511 notifications were sent out to patients; 11,106 visits to the clinics were made, giving an average attendance of sixty-seven per cent.; 815 patients were discharged; 1,709 were referred for treatment, and 439 were referred for re-admission to the Hospital.

During 1930 one scholarship was given making it possible for one of the workers to take a course in "General Principles of Mental Hygiene" at Teachers' College. One worker attended the annual meeting of the American Association of Hospital Social Workers in Boston, and three workers were sent to the First International Congress on Mental Hygiene which was held in Washington, D. C.

Requests for social workers have come from the Malnutrition clinic, the Children's Epilepsy clinic, the clinic for the treatment of functional gynecological cases and the Eye clinic. Because of lack of funds at the present time, we have been unable to comply with these requests.

From time to time some of the physicians have addressed the members of the Board and we wish to express our appreciation to Dr. George Baehr, Dr. Max Mayer, Dr. I. Rosen, Dr. Nathan Rosenthal, Dr. Bela Schick, and Dr. Dudley D. Shoenfeld for their interesting talks.

There has been no change in the curriculum for the student nurses in the department. Following the usual custom, the Director of the Social Service Department gave a brief talk on medical social service in the Hospital to the newly admitted interns.

In accordance with the established program, a series of ten lectures was given to all the student nurses, and we are indebted to the speakers for giving us their time. The following topics were covered:

"Venereal Diseases as a Social Problem," by Dr. Louis Chargin.

"An Introduction to the Welfare Agencies in New York City,"
by Mrs. Edith Shatto King of the Welfare Council.

"Family Welfare," by Miss Mary L. Gibbons of the Catholic Charities.

"Employment of the Handicapped," by Miss Sophie Boucher of the Joint Employment Bureau.

"Statistics in the Field of Social Service," by Dr. Ralph G. Hurlin, Director, Department of Statistics of the Russell Sage Foundation.

"The Problem Child," by Dr. Ira S. Wile.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

"Social Aspects of Cancer," by Mrs. Richard Goheen of City Cancer Institute.

"Harlem and Its Problems," by Mrs. Mabel Doyle Keaton of the Harlem Tuberculosis and Health Committee.

"Hospital Social Service," by Mrs. Fanny Lissauer Mendelsohn.

"Convalescent Care," by Miss Grace M. Clarke, Secretary, Convalescent Section of the Hospital Information Bureau.

I cannot give adequate recognition to the excellent services rendered by our large group of volunteers. We have had a larger number of volunteers than in any previous year, many having worked at the Hospital over an extended period of time. They have worked conscientiously and efficiently giving from nine to twenty hours a week.

We are greatly indebted to the cooperating agencies, too numerous to mention, which have been of invaluable assistance to us in our work.

Dr. Turner has been most helpful in his sympathetic understanding of our problems, and Mrs. Fanny Lissauer Mendelsohn and the staff have been untiring in their efforts for the betterment of the department and the patients under its care. To the members of the Board who have continued to demonstrate their interest and generous support of our work, I extend my appreciative thanks.

Respectfully submitted,

RUTH M. COOK,

President of the Social Service Auxiliary.

From the above, it will be seen that through these generous donations we were able to make the distributions without drawing on our funds and we still have \$187.75 on hand for 1931. We wish to express our thanks to all those who have contributed so generously in money and clothing.

Respectfully submitted,

EDITH J. BAERWALD,

Chairman.

THE MOUNT SINAI HOSPITAL LADIES' AUXILIARY SOCIETY

OFFICERS

MRS. LEOPOLD BERNHEIMER	PRESIDENT
MRS. OSCAR ROSE	TREASURER
MRS. J. A. ARNOLD	SECRETARY

TO THE BOARD OF TRUSTEES OF THE MOUNT SINAI HOSPITAL:
Gentlemen:

Another year has passed since the last report was submitted to you by our late President, Mrs. Maly R. Frenkel. It is now my pleasure and privilege to report to you the work and activities of our society during the year.

Several changes have been wrought in the past year, some in personnel and some in the activities of our society. With regard to the personnel, I am happy to say that most of our old friends are still with us and continue to give their best to the Hospital by their personal work, support, and interest.

An important change took place in the nature of our work. For many years, much of our effort has been directed toward manufacturing a number of the Hospital's requirements in dry goods, uniforms and the like. The needs of the Hospital have outgrown our capacity to supply them, and their manufacture by commercial concerns has reached a stage where it is more economical to buy them in the open market than to make them in the Hospital. Accordingly, it was decided to discontinue this work and to undertake instead the preparation of surgical dressings, which, so far, cannot be made except by hand. We are greatly indebted to Miss Willsie, in charge of the surgical work-room, for her interest and for her patience in instructing us in the inauguration of this work.

To Mr. George Blumenthal, President of The Mount Sinai Hospital, we extend our thanks for his counsel and financial advice, which have been of the greatest value to us.

Now that our year's work is at an end, I cannot close this report without calling for a thought of gratitude and remembrance for our dear friends and co-workers who have passed on—our former President, Mrs. Maly R. Frenkel, who gave so freely of her services and energy; Mrs. Clarence Housman, and Mrs. Morris L. Barnett, names that require no further comment from me.

Respectfully submitted,

MRS. LEOPOLD BERNHEIMER,

President.

RESOLUTION ON THE DEATH OF
MRS. EMIL FRENKEL

The officers and members of the Board of the Ladies' Auxiliary Society of The Mount Sinai Hospital announce with deep sorrow the death of Mrs. Emil Frenkel, their honored and beloved President.

"Almighty God, in His inscrutable wisdom, has taken our friend and companion from us. We have suffered an irreparable loss and we record our true and enduring love and respect. Her wise counsels and untiring energies have been devoted to our service; and her kindly qualities have endeared her to us. We deeply mourn her loss and extend our heartfelt sympathy to her bereaved family."

MRS. LEOPOLD BERNHEIMER,
Vice-President.

MRS. JOSEPH A. ARNOLD,
Secretary

Extracts from the Constitution on Endowed Beds and Endowments

- A Contribution of \$2,500.00 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Life Bed. Such a contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the general wards of the main Hospital, free of charge.
- A Contribution of \$3,500 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Memorial Bed. Such a contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the main Hospital, free of charge. Such donor may bequeath that right to a successor appointed by the said donor in his or her last will and testament, or by any other instrument under seal. In the event of such successor being appointed, the rights hereinbefore mentioned shall continue for a period of not over fifty years from the date of such contribution—such period, however, not to end before ten years from the death of the donor.
- A Contribution of \$5,000 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Perpetual Bed in the Children's Pavilion. Such contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the wards of the Children's Pavilion, free of charge. Such donor may bequeath that right to a successor appointed by said donor in his or her last will and testament or by any other instrument under seal.
- A Contribution of \$7,500 to the General Fund of the Hospital, if accepted by the Board of Trustees, shall endow a Perpetual Bed, but where, under the provision of any will executed prior to March 20, 1921, the sum of \$5,000 or more is bequeathed to the Hospital in payment of any Perpetual Bed, the Board of Trustees may, at their option, accept such sum in payment of such Perpetual Bed. Such contribution shall entitle the donor thereof, during his or her lifetime, to name a patient from time to time to use and occupy one bed in the general wards of the main Hospital, free of charge. Such donor may bequeath that right to a successor appointed by said donor in his or her last will and testament, or by any other instrument under seal.
- When a corporation is the donor, the privilege shall expire at the end of twenty-five years from the date of such contribution.
- Tablets to commemorate the endowment of Life and Memorial Beds shall be placed in the ward selected by the donor, subject to the rules of the Hospital. Tablets for Life Beds shall be maintained during the life of the donor, tablets for Memorial Beds for a period not beyond fifty years from the date of their endowment, such a period, however, not to end before ten years from the death of the donor. The endowment of a Perpetual Bed shall entitle the donor, or his legal representative, to have a tablet placed in the ward selected by him, or by them, or to have the endowment recorded on a tablet provided for that purpose in the corridor of the Hospital; such tablets shall be maintained in perpetuity.
- A donor may change a Life Bed endowed by him or her to a Memorial Bed by making an additional contribution of \$1,000, or to a Perpetual Bed by making an additional contribution of \$5,000, or may change a Memorial Bed to a Perpetual Bed by making an additional contribution of \$4,000.
- No patient shall occupy a Life, Memorial or Perpetual Bed unless he shall comply with the current rules of the Hospital and be a proper subject for treatment according to its regulations.
- An endowment for the establishing of any special fund may be accepted by a resolution of the Board of Trustees. Such fund may be created either for a special purpose, in which event the income therefrom shall be devoted to such purpose only, or under the name of one or more persons, in which event the income therefrom shall be devoted to the general purposes of the Hospital. Such endowment funds shall be kept by the Treasurer as special accounts. Contributions to existing funds may be made at any time, but no funds shall be created with an initial endowment of less than Ten Thousand Dollars.
